

Mili Mondal

Data Analyst

Foster City, CA | (484) 954 0270 | mili.mondal0318@gmail.com | [LinkedIn](#)

SUMMARY

- **4+ years of experience as a Data Analyst** working with Python, SQL, Tableau, Power BI, and cloud platforms (AWS, Azure) to deliver actionable insights and reporting solutions.
- Skilled in **data wrangling, ETL/ELT processes, and integration** using SQL and cloud pipelines to ensure reliable, high-quality data for business and healthcare operations.
- Proficient in **Python data analysis and visualization** with Pandas, NumPy, SciPy, Matplotlib, Seaborn, and Keras, supporting statistical modeling and predictive analytics.
- Strong understanding of **data modeling concepts** (star schema, snowflake schema, fact/dimension tables) and experience with relational (SQL Server, MySQL) and NoSQL (MongoDB, HBase) databases.
- Experienced in **partnering with business stakeholders, leading analytics projects, and mentoring junior analysts**, ensuring efficient delivery and adoption of self-service data solutions.

TECHNICAL SKILLS

- **Language:** Python, R, SQL
- **Visualizations:** Tableau, Power BI, Alteryx, Excel
- **Machine Learning:** Statistical Modeling, Regression, Classification, Predictive Analysis, Clustering (K-Means)
- **ETL and Cloud:** SSIS, SSAS, Informatica Power Center, AWS, Azure
- **Packages:** NumPy, Pandas, Matplotlib, Seaborn, Scikit-learn, Keras, TensorFlow, Ggplot2
- **Database:** SQL Server, MySQL, PostgreSQL, MongoDB, Snowflake, Teradata, Big Query
- **Tools:** SQL Server Management Studio (SSMS), Data Lake, Data Build Tool (DBT)
- **Data Governance & Compliance:** Metadata Management, HIPAA Compliance, Audit Readiness

WORK EXPERIENCE

Cardinal Health, CA | Data Analyst

May 2024 - Current

- **Designed and implemented automated healthcare data quality validation frameworks** using advanced SQL checks, anomaly detection logic, and automated error flagging within ETL pipelines, improving patient and clinical data accuracy by **35%** for downstream Tableau and Power BI reporting across drug distribution and healthcare service operations.
- **Optimized SQL Server queries** by applying indexing, partitioning, and execution plan tuning, reducing query run times by **25%** and enabling faster refresh for dashboards that monitor critical metrics such as medication supply chain efficiency and hospital inventory levels.
- **Built and orchestrated AWS-based healthcare data pipelines** leveraging EC2 for scalable compute, S3 for HIPAA-compliant storage, Lambda for automated workflows, and Redshift for analytical workloads—achieving **20% faster data processing**, reduced storage costs, and near real-time reporting for clinical and operational teams.
- **Developed, validated, and deployed a predictive patient churn and adherence model** using Random Forest in Python (Scikit-learn), integrated with AWS Lambda, achieving **92% accuracy** and reducing patient program drop-offs by **25%**, supporting proactive care coordination and cost savings for Cardinal Health programs.
- **Partnered with healthcare analysts, clinicians, and executives** to translate requirements into enterprise **Tableau dashboards** with scheduled auto-refresh and role-based access, enabling self-service insights into patient outcomes, medication adherence, and financial performance—reducing ad-hoc reporting requests by **40%**.
- **Collaborated with Data Governance and Healthcare Compliance teams** to standardize metadata definitions, enforce consistent data naming conventions, and embed governance best practices, strengthening **HIPAA compliance, audit readiness, and regulatory reporting** for pharmaceutical and clinical operations.

Cognizant, US | Data Analyst

Mar 2021 - Apr 2024

- Developed **complex SQL queries** to extract, transform, and analyze multi-million-row datasets from **SQL Server, MySQL, and PostgreSQL**, incorporating CTEs, window functions, and stored procedures to streamline analytics workflows.
- Designed, deployed, and maintained **Microsoft Power BI dashboards** with advanced DAX measures, drill-through navigation, KPI scorecards, and real-time streaming datasets, enabling **faster decision-making** across business units.
- Integrated **regression and classification models** along with clustering (K-Means) and statistical analysis into Power BI reports, enabling predictive insights on sales performance, customer segmentation, and operational efficiency.
- Created and scheduled **SSIS ETL packages** to automate data ingestion from multiple sources (ERP, CRM, APIs) into data warehouses, achieving a **25% increase in processing speed** and significantly reducing manual intervention.
- Optimized **Azure Data Lake** structures by implementing tiered storage, hierarchical namespaces, and data lifecycle policies, reducing storage costs by **30%** and improving retrieval speeds for analytics jobs.
- Produced high-quality **data visualizations** using Python libraries (Matplotlib, Seaborn) to uncover trends, correlations, and anomalies, improving stakeholder understanding and **increasing decision-making efficiency by 30%**.
- Led cross-team collaboration to document ETL workflows, build reusable SQL scripts, and train junior analysts, ensuring **knowledge transfer** and reduced onboarding time for new team members.

EDUCATION

Bachelor of Engineering in Electronics and Communication | VTU, Belgaum, India
