Naperville, IL | msyeda9430@gmail.com

Open to relocation

EDUCATION

WISCONSIN SCHOOL OF BUSINESS, UW-MADISON

Master's in Data, Insights, and Analytics

GPA: 4.0

Madison, WI

December 2026

THE CITY COLLEGE OF NEW YORK

Bachelor of Engineering, Mechanical Engineering

GPA: 3.9

New York City, NY

December 2020

EXECUTIVE SUMMARY

Results-oriented Data Analyst with 4+ years of experience applying advanced analytics, automation, and process optimization to drive measurable improvements in business value. Proficient in Python, SQL, Power Automate, Power BI, Tableau, and Excel, with expertise in data cleaning, exploratory data analysis (EDA), KPI development, and dashboard design.

WORK EXPERIENCE

Mondelēz International, Inc.

Senior Process Analyst

Naperville, IL

Dec 2023 – Present

- Designed an overtime dashboard to measure leakage in overtime expenses, collaborating with HR and finance teams in data preparation, reducing labor overtime costs by 15% YoY
- Implemented automated reporting for line-level KPIs such as efficiency, waste, and equipment/quality losses, enhancing visibility for plant leadership, reducing report generation time by 80%, and adding 10+ new business KPIs
- Led root cause analysis to identify key drivers of quality concerns by leveraging data from multiple sources (e.g., open seals, broken/crushed crackers, etc.) achieving a 75% reduction in consumer complaints
- Led a SKU waste-reduction initiative, creating Python-based automated datasets to track rejected boxes and partnered with production and compliance teams to implement process changes, reducing underweight/overweight box counts by 50%
- Spearheaded the onboarding of 10+ new hires and interns by streamlining documentation on data systems, safety protocols, and quality standards, reducing the new hire onboarding time

Process Analyst

Mar 2022 – Dec 2023

- Built Power Automate workflows to redesign equipment defect-tag tracking and coordination across four production lines, automating communication between teams and reducing response time by 40%
- Created a loss intelligence dashboard partnering with operations and maintenance teams to fix top failure modes (e.g., damaged packs, illegible printing on boxes, etc.), reducing asset losses by 50%
- Performed EDA in Python (Pandas, Seaborn) on packaging defect logs to identify that 65% of seal failures occurred at high bagger speeds, leading to speed adjustments that reduced waste by 20%
- Led root cause analysis to fix a line issue where products skipped the boxing stage, implementing sensor and process changes that eliminated defects, saving the company \$70K annually

Cargill, Inc.

Project Engineer

Hersey, MI

Jan 2021 – Feb 2022

- Designed and implemented a high-capacity HVAC system for centralized motor control rooms, eliminating overheating-related equipment failures during peak summer months, preventing ~\$250K in annual losses and improving uptime by 15%
- Led a capital project to install robotic process automation (RPA) on packaging lines, increasing throughput by ~30% from 14 to 18+ bags per minute
- Installed an autosampler and automated bagging magnet, ensuring 100% Food Safety, Quality, and Regulatory (FSQR) compliance and reducing manual inspections
- Delivered an operations improvement training program, gaining in-depth equipment and process knowledge to enhance engineering decision-making and drive operational performance

ADDITIONAL

- Technical Skills:
 - *Data Analysis & Querying:* SQL, Python, MS Access, AWS (S3, Redshift, Athena, SageMaker)
 - *Data Visualization & Reporting:* Power BI, Tableau, Microsoft Excel (PivotTables, Power Query)
- Languages: Fluent in English and intermediate in Spanish
- Hobbies: Hiking, baking and fitness
