EDUCATION

Master of Science in Computer Science

California State University, Long Beach, CA, USA

May 2025

GPA: 3.44/4.00

Relevant coursework: Advanced Algorithms, Reinforcement Learning, Distributed Systems

Bachelor of Engineering in Computer Engineering

Savitribai Phule Pune University, MH, India

Jul 2023

GPA: 4.00/4.00

Relevant coursework: Data Structures, Algorithms, Web Development, Machine Learning

SKILLS

Languages: Python, Go, JavaScript/TypeScript (ES6+), SQL (PostgreSQL, MySQL), NoSQL (Redis)

Backend Frameworks: Flask, Django, FastAPI, Tornado

API & Integration: RESTful API design, WebSocket for live reporting, gRPC, microservices architecture

Data & Workflow Systems: Kafka, Apache Airflow, Celery

Databases: PostgreSQL, MySQL, SQL Server, Redis (caching and in-memory data store)

DevOps & Cloud: Docker, Kubernetes, GitLab CI/CD, Terraform, GCP, AWS (EC2, S3)

Testing & Monitoring: PyTest, Jest, logging, alerting, metrics instrumentation (Prometheus, Grafana)

Frontend: React, HTML5, CSS3/SASS, UI component libraries, responsive design

PROFESSIONAL EXPERIENCE

Saayam For All (501(c)(3)), Remote: Software Engineer (Volunteer) — Volunteer

Jun 2025 – Present

- Led the design and implementation of a self-serve web portal for clients using React and TypeScript, building modular components that support dynamic configuration of AI control agents; collaborated closely with product managers and solution architects to refine requirements and ensure alignment with user needs.
- Partnered with UX designers to refine user flows and championed accessibility improvements (WCAG compliance), resulting in a 40% reduction in page load times through performance optimizations.
- Integrated RESTful APIs and real-time WebSocket streams from backend microservices (Python/Flask) to display live sensor data and control statuses; worked with backend engineers to define API interfaces and troubleshoot performance bottlenecks, ensuring a robust and responsive system.

California State University, Long Beach, CA, USA: Software Developer

Aug 2024 – Dec 2024

- Built internal tools and student-facing interfaces for the university portal using JavaScript and Python; developed a custom RESTful API in Python (Flask) to securely fetch and aggregate data for these tools.
- Worked cross-functionally with IT staff to optimize build pipelines, implement continuous integration (GitLab CI), and automate deployments to Google Cloud (GKE) using Docker and Kubernetes; also implemented basic logging and monitoring for these services to ensure reliability.
- Collaborated in design discussions and performed code reviews with faculty and student developers, promoting best practices and maintainable code throughout the development cycle.

Elite Softwares Pvt. Limited, Pune, India: Full Stack Engineer

Aug 2021 – Oct 2021

- Developed and maintained interactive dashboards for a large-scale SaaS platform using React, Redux, SASS, and TypeScript, ensuring pixel-perfect adherence to design specs and delivering new features on a bi-weekly sprint cycle.
- Introduced automated front-end testing with Jest and React Testing Library, increasing code coverage from 45% to 85% and reducing regression bugs by 30% through continuous integration.
- Worked closely with senior backend engineers to integrate RESTful and GraphQL APIs, handling authentication, caching (using Redis) and error management; collaborated on API schema design to improve performance and scalability, and advocated for enhanced cross-service logging/monitoring to improve fault detection.

PROJECTS

Usage-Based Billing & Analytics (UI)

Tech: Python (Flask), React, TypeScript, PostgreSQL, D3.js

- Designed and developed a RESTful API using Flask and PostgreSQL to aggregate usage data and cost analytics, providing secure endpoints for real-time KPIs and anomaly flags per tenant.
- Developed an interactive React dashboard with dynamic D3.js visualizations for usage metrics; implemented responsive layouts and keyboard navigation to meet accessibility standards.
- Optimized front-end performance with client-side caching and code-splitting; integrated API calls with retries and exponential backoff, cutting Time-to-Interactive by 35% (improving load times and user experience).
