

Summary

Results-oriented Data Analyst and Business Analyst with 3+ years of experience in supply chain leadership, logistics optimization, and project management. Adept at leveraging technologies such as SQL, Python, Power BI, Excel, Tableau, and cloud platforms to uncover insights and improve business operations. Proven success in developing web applications, managing agile teams, and conducting impactful research in IoT and automation. Strong communicator with a track record of driving data-informed decisions and innovation.

Education

Webster University, San Antonio, TX	<i>Aug 2023 – Aug 2025</i>
<i>Master of Arts in Information Technology Management</i>	
New Horizon College of Engineering, Bangalore, India	<i>Aug 2019 – May 2023</i>
<i>Bachelor of Science in Computer Science and Engineering</i>	

Technical Skills

Data Analytics & Programming: Python, SQL, Power BI, Tableau, Pandas, NumPy, Excel (Pivot Tables, Macros), Web Scraping
Database & Cloud Tools: MySQL, PostgreSQL, MongoDB, AWS (Lambda, S3, EC2), REST APIs
Project & Collaboration Tools: JIRA, Confluence, Microsoft Project, Visio, GitHub, Agile & Scrum methodologies
Business & Domain Knowledge: Supply Chain Optimization, Logistics Management, Process Improvement, Inventory Planning, IoT Solutions

Professional Experience

Data Analyst <i>Python (Pandas, NumPy, openpyxl), SQL, Power BI, Excel, DAX</i> <i>ShrinQ Consulting Group, USA</i>	<i>Aug 2023 – Present</i> <i>Louisville, KY.</i>
- Built Python-based automation scripts for logistics metrics, reducing monthly report generation time by 30%. - Developed interactive Power BI dashboards to monitor supplier lead time, cutting cross-departmental inquiry time by 40%. - Created and optimized SQL queries to analyze procurement data, identifying \$150K+ in annual cost-saving opportunities. - Improved demand planning accuracy by 18% through statistical forecasting and historical trend analysis. - Collaborated cross-functionally to reduce freight cost by 12% by identifying inefficiencies in warehouse distribution models.	
Business Analyst – Supply Chain Transformation <i>Python, SQL, Excel (PivotTables, VBA), MS Visio, JIRA, Confluence</i> <i>ShrinQ Consulting Group, India</i>	<i>Jan 2023 – Jun 2023</i> <i>Bangalore, India</i>
- Led the digitization of supplier and purchase order workflows using Excel dashboards and Python scripts, cutting manual effort by 50%. - Gathered and documented requirements using JIRA and Confluence, accelerating delivery cycles by 15%. - Designed visual process flows using MS Visio to map out current and future state operations, streamlining handoffs between departments. - Developed SQL scripts to cleanse and merge vendor datasets, boosting reporting accuracy by 22% and reducing data retrieval time by 35%. - Facilitated cross-team workshops to ensure stakeholder alignment, resulting in 100% on-time milestone delivery for 3 major projects.	

Technical Projects

Procurement Spend Analysis Dashboard <i>SQL, Power BI, Excel</i>	<i>Aug 2023</i>
- Designed a procurement analytics dashboard to track vendor spend, cost variance, and lead time KPIs. - Optimized SQL queries for spend categorization and created interactive Power BI visuals, identifying \$50K+ in potential vendor consolidation savings.	
Logistics Cost Optimization Analysis <i>SQL, Python, Power BI</i>	<i>Jul 2022</i>
- Analyzed warehouse-to-customer delivery data to calculate cost-per-mile and detect high-cost shipping lanes. - Created Power BI dashboards and recommended rerouting strategies, achieving a projected 10% reduction in logistics cost.	
Supplier Performance Tracker <i>Excel (Macros, PivotTables), Power BI</i>	<i>Feb 2022</i>
- Automated monthly supplier delivery reports using Excel macros and built performance dashboards in Power BI. - Identified late delivery trends, enabling renegotiation with underperforming suppliers and improving delivery SLAs.	
Zillow House Value Prediction <i>SQL, Python (PySpark, Scikit-learn), Power BI, Excel</i>	<i>Apr 2021</i>
- Processed 90,000+ property records using Python and SQL; engineered features revealing location-based price influencers. - Trained Random Forest and XGBoost models reaching $R^2 = 0.88$; improved pricing workflow efficiency by 50% via Power BI dashboards.	

Certifications

- Power BI Data Analyst Associate** – Microsoft
- SQL (Advanced)** – HackerRank Skill Certification

Publications

- “Exploration on Pothole Detection Using IoT to Help People”** – Presented at the 2nd International Conference on Data Science and Artificial Intelligence (ICDSAI 2023), organized by Lendi Institute of Engineering and Technology, Vizianagaram, India, and California State University, USA (Online Mode).
