

Mohammed Khaled Pasha

Atlanta, Georgia || +1 9782017832|| mohammedkhaled81498@gmail.com || [LinkedIn](#)

OBJECTIVE

Senior Java Full Stack Developer with 5+ years of experience in **Spring Boot**, **Microservices**, and cloud platforms (**AWS/Azure certified**). Proven track record in banking/insurance domains, delivering scalable solutions that improve performance by 40-60%. Expert in full-cycle development from architecture to deployment using **CI/CD** pipelines and containerization (Docker/Kubernetes). Strong collaborator in **agile** environments with expertise in version control, project management and documentation.

TECHNICAL SKILLS

-
- **Methodology:** SDLC, Agile, Waterfall Languages
 - **Languages & Software:** Java, Python, C++
 - **Databases:** Oracle, RDBMS (SQL), MS SQL Server, MySQL, PostgreSQL, MongoDB, NoSQL
 - **Frameworks:** Spring (MVC, Boot, Security), Microservices, Hibernate, JSF J2EE
 - **Technologies :** Servlets, JSP, JSTL, JavaBeans, JDBC
 - **Web Technologies:** HTML5, CSS3, JavaScript, TypeScript, Bootstrap, jQuery, Ajax, JSON, and XML
 - **Application Server:** Apache Tomcat, IBM WebSphere, Kafka
 - **Cloud Technologies:** Azure, GCP and AWS
 - **API & Integration:** RESTful APIs, SOAP, GraphQL
 - **Cloud & DevOps:** Azure, AWS, CI/CD Pipelines, Docker, Kubernetes,
 - **Testing & QA:** Selenium, TDD, BDD, Junit, JMeter
 - **Version Control Tools:** Git, GitHub, GitLab
 - **Analytical Skills:** Data Visualization, Data Collection, Data Mining, Data Interpretation, Machine Learning, Deep Learning, Statistics, Business Intelligence, Advanced Analytics, Critical Thinking, Decision-making, Attention to detail, Research.
 - **Soft Skills:** Leadership skills, Verbal Communication, Strong Analytical skills, Strategic Thinking, Problem Solving, Independent Thinker, Presentation skills, Time Management, Interpersonal skills, Entrepreneurial, Effective Planning, Project Management skills.

EDUCATION

Master of Science in Information Systems

August 2022 – May 2024

Auburn University at Montgomery, Montgomery, AL

- **Relevant Course work:** Intro to Big data, Python for Data Analytics, Management of Tech Organizations, Applied Machine Learning Analytics, Access Management, Data Driven Policy, Management of Systems Security, Statistical Data Analysis, Data Analytic tools.

Bachelor of Technology in Computer Science and Engineering

July 2016 – March 2020

Geethanjali University of Technology, Telangana

- **Relevant Course work:** Data Structures, Discrete Mathematics, OOP, Operating Systems, Computer Network, Fundamentals of Electronics, Engineering Graphics, Calculus, Information Security, IoT, Cyber Security, Data Mining, Statistics, Economics.
- Awarded a **75%** merit scholarship.

PROFESSIONAL EXPERIENCE

Senior Software Engineer

Jan 2024 – Present

State Street Bank, Boston, MA

- Designed, developed, and implemented custom software solutions **to enhance Transaction Management System (TMS)** functionality.
- **Led end-to-end Agile, SDLC processes**, including requirements analysis, sprint planning, stand-ups, and retrospectives, delivering **secure, scalable applications** aligned with **business objectives** in the insurance industry, ensuring compliance with regulatory standards and efficient processing of claims, underwriting, and policy management.
- **Architected and deployed Microservices** with **Spring Boot**, seamlessly integrating with **Amazon API Gateway** to enable distributed, loosely coupled systems with high availability and scalability, supporting high-volume insurance transactions such as premium calculations and real-time policy updates.
- **Designed dynamic and maintainable web applications** using **Spring MVC**, employing the **Model-View-Controller (MVC)** architecture to build responsive, RESTful services, enhancing modularity and code reusability for customer-facing insurance portals and internal claims management systems.
- **Automated large-scale data processing workflows** using **Spring Batch**, ensuring reliability, fault tolerance, and restart ability in processing insurance claims, policy renewals, and underwriting data, reducing manual intervention, and improving processing efficiency.
- **Established low-latency, bi-directional communication** between Microservices using **Spring RSocket**, enabling eventdriven architectures and enhancing responsiveness for time-sensitive insurance transactions like claims approval or fraud detection.
- **Designed and optimized database layers** with **Spring JPA** and **Hibernate**, creating efficient queries with **HQL**, **Native Queries**, and **Criteria API**, integrating seamlessly with **MongoDB** databases for high-speed data retrieval and storage of insurance policy data and claim histories.
- **Developed and tested REST APIs** using **RestAssured**, ensuring secure, scalable API endpoints with **JWT-based authentication**, supporting integration with **Amazon API Gateway** for high-volume traffic handling, especially for insurance claim submissions and premium inquiries.
- **Deployed cloud-native applications** on **AWS** using **Lambda functions**, **Amazon RDS**, and **AWS Step Functions**, automating complex workflows such as insurance claims adjudication and policy issuance, ensuring scalable, cost-efficient cloud infrastructure.
- **Containerized and orchestrated Microservices** using **Docker** and **Kubernetes**, integrating with **Amazon EKS** to automate deployment, scaling, and management, ensuring high availability in production environments for critical insurance services.
- **Automated CI/CD pipelines** with **Jenkins**, integrating **AWS CodePipeline** and **SonarQube** to enforce code quality standards, accelerate deployment cycles, and streamline release processes for insurance applications such as claims management systems and underwriting tools.
- **Streamlined build and deployment processes** with **Maven** for backend services and **Webpack** for frontend applications, ensuring efficient dependency management and optimized packaging of insurance applications.
- **Implemented high-throughput, fault-tolerant messaging** with **Apache Kafka**, ensuring reliable, scalable communication between distributed Microservices in event-driven architectures, such as triggering notifications and updates for policyholders and claims adjusters.
- Utilized Agile software development methodologies, participating in **sprint planning, code reviews, and testing cycles**.
- Developed automation scripts in **Python, and SQL** to streamline data transformation processes and **reduce processing time by 50%**.
- Enhanced system security and data integrity by **implementing encryption, authentication protocols, and secure data exchange mechanisms**.
- Created and optimized indexing strategies for large-scale laboratory databases, improving **query performance by 60%**.

Dell Technologies, Hyderabad, India

- ESRS is basically designed to provide secure remote support to the customers for the devices implemented at the customer's site from EMC's support analysis. ESRS is available in multiple formats such as Virtual Appliance or Virtual Edition, Embedded Application, Embedded Appliance, installable application etc.
- Optimized API response times by implementing **caching mechanisms** and **asynchronous processing techniques**.
- Spearheaded Agile-driven **SDLC** processes, including sprint planning, stand-ups, and retrospectives, ensuring timely delivery of scalable banking applications aligned with regulatory compliance and organizational standards.
- Developed high-performance backend banking applications using **Java 11**, leveraging Functional Programming, Comparators, **Http Client API**, and Nest-Based Access Control for secure, modular, and responsive financial systems.
- Built Microservices architectures for **ESRS** using **Spring Boot**, enabling distributed communication with Spring Cloud for service discovery, load balancing and dynamic configuration management, enhancing system reliability and scalability.
- Implemented secure APIs and services using **Spring Security**, **OAuth2 authentication and role-based access control (RBAC)**, ensuring robust protection of sensitive banking data and compliance with financial regulations.
- Automated repetitive tasks using **Python scripts** Web Scraping with BeautifulSoup, Scrapy, **Selenium**
- Integrated database solutions using **Spring JDBC with JDBCTemplate, NamedParameterJdbcTemplate, RowMappers** and DTO patterns, optimizing interactions with **SQL Server** to efficiently manage transactional data.
- Built and validated **REST APIs** using Postman, ESRS Application API request workflows, and verifying consistent performance and robust error handling in financial service endpoints
- Skilled in client-side routing using **React Router v6+** for dynamic single-page applications (SPAs).
- Orchestrated **Docker** containers and **Kubernetes** clusters with **Amazon EKS**, automating application deployments, load balancing, self-healing and ensuring fault tolerance.
- Hands-on experience with **AWS SNS** (Simple Notification Service), **SQS** (Simple Queue Service), Azure Service Bus, **Kafka**, **RabbitMQ**.
- Deployed and monitored backend banking services on **JBoss application servers**, integrating **Grafana** for real-time performance visualization and infrastructure monitoring.

Software Engineer

January 2019– April 2021

Hellinex Cloud, India

- Designed status monitoring portals using **Python** and **Java** for an uninterrupted check on message delivery systems for a foolproof Multifactor Authentication for State Bank of India SMS Project.
- Enhanced **Management Information Systems (MIS) Report** by incorporating **complex SQL queries** from Relational databases, leading to **30% improvement in systems tracking and bolstered security** against threats for organization.
- Improved **SMS Management Applications** and **advanced user interface portals** using **PowerBI**
- Accomplished a **Strategy Formulation approach** in **Java Multi-threading and hibernate** to develop an application, reducing compiling time for **1 million messages from 3 days to 25 minutes**.
- Designed and deployed processing of Microservices and **RESTful APIs** with **JSON** payloads, creating decoupled and scalable services for efficient integration and real-time loan processing.
- Achieved daily delivery of **500,000 error-free messages** from client businesses to customers by intricately overseeing iSMS initiatives, incorporating continuous database monitoring, and optimizing overloaded settings, with a focus on **accounting, finance, and logistics**.
- Collaborated with the State Bank of India's (SBI) audit team to produce high quality data by **analyzing 150 SBI branches annual audit reports** and critical documents to report to **Reserve Bank of India (RBI)**.
- Managed code repositories and team collaboration via **GitHub**, utilizing GitHub Issues for efficient tracking of ESRS features and bugs, facilitating streamlined development cycles.
- Worked closely with cross-functional team's developers, analysts to **enhance software usability and system performance**.
