WORK EXPERIENCE

Hornblower Group (Anchor Operating System) | Westlake Village, CA

June 2025 – Present

Software Engineer Intern

Tools: React.js, Redux, Redux-Saga, Node.js, GraphQL, JWT, Jira, AWS Lambda, DynamoDB, S3, SQS, Terraform, Datadog

- Built reusable React.js components and serverless backend features for a scalable, distributed ticketing platform with 70M+ transactions.
- Collaborated with cross-functional teams to debug and resolve production issues in a fast-paced Agile environment.
- Participated in the design and implementation of backend services and APIs to support business-critical functionalities.
- Contributed to code reviews, documentation, and CI processes to ensure high-quality, maintainable software delivery.

Geospatial One | Indore, India

Feb 2024 – April 2024

Software Engineer Intern

Tools: React.js, Flask, PostgreSQL, PostGIS, SQL, GeoServer, Google Earth Engine, Google Cloud, ArcGIS, Leaflet, Python

- Led development of an interactive web app streamlining geospatial analysis and reducing user effort by 60%.
- Engineered RESTful APIs enabling dynamic geospatial processing and one-click analysis without manual coding.
- Enhanced user experience by 30% by designing and implementing intuitive, component-based React.js interfaces.
- Successfully deployed and configured GeoServer on AWS EC2 instance to serve geospatial data for web applications.

Department of Computer Science, SGSITS | Indore, India

Jun 2022 – Aug 2022

Software Engineer Intern

Tools: Java, Servlets, Object-Oriented Programming (OOP), JDBC, JSP, JUnit, MySQL, SQL, jQuery, Maven, MVC

- Developed a full-stack web app to automate guide allotment and help professors manage Major Project groups.
- Devised and implemented an algorithm for automated faculty assignment, reducing allocation time by 75%.
- Designed and developed the relational database to optimize data storage and retrieval efficiency.
- Managed a team of 5 members, delegating tasks and ensuring the timely completion of project objectives.

TECHNICAL SKILLS

Programming Languages: Java, C, C++, C#, Scala, Python, JavaScript, TypeScript, PHP, Bash Scripting, SQL, PL/SQL, T-SQL

Libraries: Pandas, NumPy, Scikit-learn, Matplotlib, Seaborn, SciPy, TensorFlow, Keras, PyTorch, Hugging Face, BERT

Databases: RDBMS, MySQL, Oracle DB, PostgreSQL, SQLite, MSSQL, NoSQL, MongoDB, DynamoDB

Operating Systems: Windows, Linux (Ubuntu), macOS

Tools: Git, Github, Docker, Hadoop, Spark, AWS, Azure, .NET, Microsoft Office, CI/CD, Jenkins, Spring

EDUCATION

Master of Science, Computer Science

Sept 2024 – Present

University of California, Riverside

GPA: 3.88/4.0

Bachelor of Technology, Computer Science

Nov 2020 – June 2024

Shri Govindram Seksaria Institute of Technology and Science (SGSITS), India

CGPA: 8.27/10

PROJECTS

Visual Question Answering (Tools: Python, Flask, PyTest, React.js, Cloudinary, CUDA, Transformer, Attention Mechanism):

- Implemented a Machine Learning based system leveraging computer vision and NLP to generate contextual answers based on input images, assisting visually impaired users and encouraging curiosity in children.
- Owned and implemented unit testing with PyTest, ensuring code reliability, efficiency, and accuracy.

Coding Contest Tracker (Tools: Node.js, Express.js, React.js, Firebase, Visual Studio Code, JavaScript, Postman):

- Built a Chrome extension that aggregates coding competition data from 11 platforms (LeetCode, GeeksForGeeks, HackerRank, etc.). The extension currently has over 200 users.

LLM Consistency & Fact Verification Framework (Tools: Python, PyTorch, T5, SBERT, Wikipedia API, JSON, Regex):

- Developed a modular evaluation tool to test large language models (LLMs) for logical consistency and factual correctness using paraphrasing, semantic similarity, and Wikipedia-based verification.
- Enabled plug-and-play model support to ensure consistent, accurate, and repeatable evaluation across diverse LLMs.
