SUMMARY

Business Intelligence and Data Analytics professional with over 4 years of experience leveraging SQL, Python, and modern BI tools to deliver actionable insights across supply chain, finance, and operations domains. Proven track record of optimizing delivery performance, streamlining cost reporting, and improving inventory and logistics efficiency through data-driven solutions. Adept at developing self-service dashboards, predictive models, and audit pipelines that enhance decision-making and reduce operational risk. Experienced in collaborating with cross-functional teams and using cloud platforms (AWS) to build scalable, automated data solutions aligned with strategic business goals.

SKILLS:

- **Certifications:** AWS Cloud Practitioner.
- **Programming Language:** Python, R, SAS, MATLAB.
- **Data Analysis Tools:** NumPy, Pandas, Matplotlib, SciPy, OpenCV, scikit-learn, Snowflake.
- **Database Management:** SQL (MySQL, PostgreSQL, Redshift), NoSQL (MongoDB), Hadoop, Spark, Oracle Database
- **Visualization Software:** Tableau, Quicksight, Power BI, Looker, Microsoft Excel.
- **Cloud & Tools:** AWS (EC2, S3, RDS), Docker, Kubernetes, Ansible, Terraform, Kafka.
- **Data science & Analytics:** Data Analytics, Data Visualization, Data Modeling, Ad Hoc Analysis, Forecasting Models.

EXPERIENCE:

Business Intelligence Engineer – Chewy Inc., Florida

May 2024 - Current

- Led the development of a predictive analytics solution using **Python**, **SQL**, and **Redshift** to optimize inventory across **100,000+ SKUs** and multiple warehouses, reducing stockouts by **15%** and cutting inventory costs by **10%**. Enabled cross-functional teams to leverage insights for demand forecasting and supply chain efficiency.
- Developed self-service dashboards and automated anomaly detection audits in **AWS QuickSight** and **Power BI**, proactively identifying inventory stockout trends and reducing fulfillment defects by **15%**.
- Established and automated scalable processes using **AWS tools** (EC2, S3, RDS) to optimize transportation routes, improving operational efficiency by **15%** and reducing delivery bottlenecks for high-demand regions.
- Leveraged **clustering algorithms** and **regression analysis** to analyze customer purchasing behavior, creating targeted marketing strategies that boosted retention by **12%** in the first quarter of the implementation.
- Partnered with cross-functional teams, including sales and operations, to define and track KPIs (e.g., order accuracy, fulfillment rates). Developed data-driven strategies that improved performance visibility and informed executive decision-making.
- Conducted causal analyses of program launches using **Apache Spark** and communicated actionable recommendations to stakeholders, mitigating risks and aligning objectives with organizational strategy.

Data Analyst – VowelWeb, India

Jul 2021 - Aug 2023

- Optimized supply chain performance by engineering robust **SQL** and **Python** pipelines that analyzed vendor delivery schedules and real-time logistics data, improving on-time delivery rate by **22%** across regional warehouses.
- Built dynamic **Power BI** and **Tableau dashboards** for cross-departmental financial and operational reporting, enabling monthly variance analysis and forecasting of transportation and warehousing costs, which helped identify savings of **\$1.5M** annually.
- Conducted cost-benefit analysis and statistical modeling (**t-tests**, **ANOVA**) on warehouse space utilization and inventory carrying costs, influencing leadership to redesign space allocation and save **13%** in overhead costs.
- Developed **Python-based** audit frameworks to detect billing anomalies and invoice mismatches, reducing financial reconciliation time by **30%** and strengthening compliance with procurement policies.
- Collaborated with procurement and logistics teams to automate delivery delay root cause analysis, using **SQL** and statistical clustering to identify bottlenecks, resulting in **18%** faster delivery cycle times.

Junior Data Analyst – VowelWeb, India

Jul 2020 - Jun 2021

- Supported the supply chain analytics team by preparing weekly delivery performance reports using **Excel** and **SQL**, improving visibility into shipment delays and vendor compliance.
- Assisted in cleaning and merging delivery and invoice data from **SAP** systems using **Python (Pandas)**, helping senior analysts conduct cost variance analysis between projected and actual logistics spend.

EDUCATION:

Depaul University, Chicago

Master of Science in Business Analytics

Sep 2023 - Jun 2025

GPA - 3.93

Savitribai Phule Pune University, India

Bachelor of Engineering in Electrical Engineering

Jun 2017 - Jun 2021

GPA - 3.54

ACADEMIC PROJECTS:

Transformed Sales and Customer Insights for Strategic Decision-Making

- Designed and implemented Tableau dashboards with real-time data tracking (RTDT), enabling actionable insights on sales trends, customer segmentation, and engagement using advanced visualizations and interactive filtering.
- Utilized advanced Excel functionalities including macros, pivot tables, VBA scripting, and data analysis toolpacks to clean, transform, and analyze datasets, ensuring accuracy and optimizing integration with Tableau for advanced reporting.
