

Mounika Juluri

Data Analyst

(336) 900-9662 • Mounijuluri25@gmail.com • [LinkedIn](#)

Professional Summary

Analytical and detail-oriented Data Analyst with over 3 years of experience in the healthcare and financial sectors, specializing in deriving actionable insights through data exploration, advanced analytics, and predictive modeling. Proficient in a wide array of tools and technologies including Python, R, SQL, Power BI, and Tableau to support business decisions, optimize performance, and streamline data workflows. Skilled in collaborating across multidisciplinary teams to uncover key business drivers and deliver impactful data solutions. Known for translating complex datasets into intuitive visualizations and insights while upholding data security, integrity, and compliance with industry regulations like HIPAA.

Skills

Data Analysis: Descriptive & Inferential Statistics, Exploratory Data Analysis (EDA), KPI Development, Cohort Analysis, A/B Testing, Root Cause Analysis

Data Wrangling: Data Cleaning, Normalization, Outlier Detection, Feature Engineering, Data Imputation, Data Merging

Databases & Querying: SQL, MySQL, PostgreSQL, Redshift, Snowflake – Joins, CTEs, Subqueries, Window Functions

Data Visualization: Power BI, Tableau, AWS QuickSight, Excel Dashboards – Drill-down Reports, Risk Heatmaps, Forecast Charts

Programming & Scripting: Python (Pandas, NumPy, Scikit-learn, Matplotlib, Seaborn, Regex), R (ggplot2, dplyr, caret), Excel (PivotTables, VLOOKUP, VBA Macros)

Statistical Modeling & Forecasting: Linear & Logistic Regression, Time Series Forecasting (ARIMA, Prophet), Clustering, Classification, Risk Scoring Models

Healthcare & Finance Domain Tools: HIPAA Compliance, HL7 Data Standards, EHR/EMR Analytics, Patient Outcome Analysis, Patient Risk Stratification, Credit Scoring Models, Financial Ratios

ETL & Automation: Apache NiFi, Talend, Airflow, Python Scripting, Batch Jobs, Workflow Automation, Excel Macros

Cloud & Tools: AWS (S3, EC2, Redshift), Git, JIRA, Confluence, Agile & Scrum Methodologies, Data Documentation

Work Experience

HCA Healthcare, USA

Aug 2024 - Present

Data Analyst

- Designed and implemented machine learning models using historical patient admission and discharge data to forecast hospital resource requirements, leading to a 15% reduction in average patient wait times and improved operational readiness during peak admission periods.
- Developed robust Python-based automation scripts that transformed, cleaned, and integrated healthcare data from multiple internal systems, reducing manual data preparation time by over 30 hours per week while ensuring full HIPAA compliance and data privacy.
- Created and maintained interactive dashboards in Tableau and Power BI to monitor real-time hospital admission trends, patient volumes, and departmental KPIs, providing actionable insights for department heads and healthcare executives to drive performance improvements.
- Led cross-functional meetings with billing, compliance, and IT teams to identify root causes of insurance claim rejections; conducted statistical analysis using R and Excel to address workflow inefficiencies and improve claim approval rates by 15% within a six-month timeframe.
- Analyzed patterns in high-cost medical procedures and service utilization by performing detailed cohort and cost-benefit analyses, which directly supported recommendations that drove a 12% reduction in unnecessary expenses and improved care delivery strategies.
- Conducted data validation and quality assurance of predictive models used for clinical decision support systems, employing confusion matrices and recall/precision metrics to ensure models met performance benchmarks before production deployment.
- Maintained end-to-end data compliance with HIPAA standards by implementing data anonymization, secure encryption, and access control protocols for all patient-level datasets throughout the data lifecycle.

Aplus Datalytics, India

Jun 2019 – Jul 2022

Data Analyst

- Designed and implemented financial risk models to evaluate borrower creditworthiness and market volatility, enabling more accurate decision-making for investment portfolios and reducing exposure to high-risk clients by identifying key risk indicators.
- Led comprehensive data quality audits and implemented robust data cleaning pipelines, decreasing inconsistencies and errors by 40%, which in turn increased the reliability of financial models and reports used by stakeholders.
- Engineered critical financial features such as debt-to-income ratios, loan-to-value ratios, credit utilization, and return volatility using Python and SQL, significantly enhancing the predictive power and reliability of credit risk scoring algorithms.
- Constructed advanced correlation matrices and heatmaps in R to explore relationships between asset classes, optimizing portfolio allocation strategies and resulting in a 5% reduction in overall portfolio volatility and improved investment stability.
- Developed executive-level dashboards using Tableau and Power BI to present daily updates on portfolio performance, default probabilities, and capital exposure, allowing senior stakeholders to respond to risks in real time.
- Collaborated with compliance officers and cross-functional analytics teams to align data strategies with financial regulations, which led to a 10% reduction in audit discrepancies and ensured that all modeling assumptions were fully documented and traceable.
- Automated data extraction, transformation, and reporting processes using Python scripts and SQL workflows, cutting down the time required for report generation by 60% and enabling faster delivery of insights to the business.

Education

Master's in Computer Science <i>Saint Leo University, Tampa, Florida</i>	Aug 2024
Bachelor's in computer science <i>Chaitanya Degree College, Hanamkonda, India</i>	May 2019
