Education

Arizona State University, B.S. in Computer Science

Tempe, AZ

July 2025

- **Relevant Coursework:**

- Data Structures and Algorithms
- Software Quality Assurance and Testing
- Linear Algebra
- Programming Languages
- Calculus I, II, and III
- Computer and Network Forensics
- Natural Language Process (LLMs)
- Algorithms in Computational Biology
- Distributed Computing

Professional Experience

Embedded Systems Engineer Intern, Raytheon (Capstone), Tempe AZ

August 2024 – May 2025

- **Embedded Systems Security Testing Framework:** Created an automated security testing framework specializing in embedded systems utilizing Git, C++, Python, and some personal scripting on the Flipper Zero.
- **Automated Scripting and E2E product development:** Applied and expanded my knowledge of embedded systems security, automated scripting with Python, E2E product development, and Agile methodologies.

Project Management Intern, Zelle, Scottsdale AZ

January 2023 – April 2023

- **Agile Documentation:** Spearheaded the integration of Agile methodologies into program documentation, ensuring uniformity, consistency, and eliminating potential impediments increasing sprint efficiency by 20%.
- **Jira Artifacts Automation:** Engineered an automated system for Jira Artifacts Approval Requests within Development (Scrum) teams, significantly accelerating the development lifecycle within the same sales quarter and improving team productivity by upwards of 10%.

Full-Stack Developer Intern, SafeNet Consulting, Milwaukee WI

June 2018 – August 2018

- **Web Application Development:** Led the conception and development of 5 ASP.NET web applications for use in non-profit organizations, demonstrating technical expertise and aligning solutions with the product owner's objectives.
- **Strategic Development and Deployment Leadership:** Managed end-to-end development of web applications, orchestrating seamless product deployment in collaboration with developers of diverse expertise and backgrounds while ensuring alignment with product deployment expectations.

Featured Projects

- **Packet Sniffing:** Utilized Wireshark for packet sniffing, systematically sorting through lists of IP addresses. The goal of this project was to learn about enhanced network security and experience valuable insights for troubleshooting and optimization.
- **Cryptographic Encoding:** Implemented RSA key encryption and decryption for enhancing data security. This project conceptualized development and integration of algorithms to safeguard sensitive information, ensuring secure communication or data protection.

Technical Skills

Proficiency: Python, C++, SQL, Bash, Java, Git, Team Management, Trello/Kanban, E2E Framework Development, SDLC.

Previous Experience: C, C#, MIPS Architecture, MATLAB.
