EDUCATION

University: University of Connecticut
Major: Computer Science
Degree: Bachelors of Science
Graduation: May 2018

University: University of Connecticut
Major: Applied Mathematics
Degree: Bachelors of Science
Graduation: May 2018

SKILLS

Quality Assurance
Testing
Auditing
DO-178C Compliance
Testing Automation
SDLC
Root Cause & Corrective Action

TOOLS

Python
DOORS and DNG
Jira
HQMS
Confluence
Azure DevOps
Jenkins

INTERESTS

Fishing
Yoga
Muay Thai
Hiking

ABOUT:

Highly proficient Software Engineer with a career spanning the **full SDLC**, emphasizing a strong commitment to **quality assurance** and **comprehensive testing** practices. Adept at problem-solving, critical thinking, and delivering results in fast paced and demanding environments.

WORK EXPERIENCE

Boeing / Software Quality Engineer

June 2023 - PRESENT

- **Drive defect reduction in aerospace software** through comprehensive assessment of requirements, code, and all **testing** artifacts.
- **Verify software adheres** to industry standards (e.g., **DO-178C**, **AS9100**) by evaluating development practices and deliverables.
- **Improved software compliance by up to 25%** through successful implementation of Corrective and Preventive Action (**CAPA**) guidelines.
- **Enhanced software integrity** and **mitigated hundreds of rework hours** by conducting thorough Stage of Involvement reviews (**SOI**) First Article Inspections (**FAIs**).
- Document and report all software/hardware findings and collaborate with systems, software, electrical engineers to support issue resolution.

PACCAR / Embedded Software Engineer

February 2022 - April 2023

- **Designed and developed a test automation platform** (using Python, a frame grabber, and Visio) that **increased testing efficiency** and **elevated ASPICE compliance by one level**.
- Leveraged advanced testing and simulation strategies, including:
 - **Integration/regression tests on HIL systems**.
 - **Virtualized ECU simulations** using CANoe/CAPL.
- Utilized **RCCA** to provide feedback for **correcting defects**, resulting in a **15% reduction in defect recurrence** and **improved resolution time**.
- Managed key aspects of the SDLC by defining **control system requirements** (DNG), facilitating **agile inter-team reviews** (IBM RTC), and building **software release packages** (Jenkins).

Collins Aerospace / Software Engineer

February 2020 - February 2022

- Developed Python and CTL scripts to verify communication over **ARINC-629** and **MIL-STD-1553** on 777X and F-15 systems.
- Designed and implemented **DO-178C** compliant test procedures for **real-time flight software** using object-oriented and functional programming.
- Managed and tracked tests throughout the **SDLC** using tools such as **DOORS**, **Synergy**, **ClearQuest**, and **ClearCase**.
- Led post-mortem investigations to report on **corrective and preventive actions**.
