Dallas, TX; 703-423-9081; mursal2125@gmail.com; [linkedin.com/in/mursal-mahmud](https://www.linkedin.com/in/mursal-mahmud)

EDUCATION

The University of Texas at Dallas

December 2024

Bachelor of Science, Information Technology Systems

Concentration: Business Intelligence and Analytics

SKILLS

Analysis Tools & Databases: MS Excel, MS Power BI, MS Visio, Tableau

Programming: Python, SQL, Java

PROFESSIONAL EXPERIENCE

Noorishment, Plano, TX

August 2024 – December 2024

IT Data Intern

- Leveraged SQL (joins, aggregations, CTEs) to extract donor and program participation data, feeding results into Excel PivotTables for leadership reports; improved reporting turnaround by 25% and supported \$50K+ in grant awards.
- Presented Power BI dashboards (DAX) covering 15+ KPIs with drill-downs and cohort analysis to cross-functional leadership, enabling data-driven budget and volunteer reallocations.
- Mapped intake-to-reporting workflow in Visio, consolidated data sources into a single system of record, and explained redesigned processes to non-technical staff, reducing handoffs and doubling reporting frequency.
- Facilitated requirements workshops with Program, Development, and Finance; captured user stories and acceptance criteria; produced executive summaries that informed funding and staffing decisions.

Makka Auto Sales, Dallas, TX

May 2022 – August 2023

Data Analyst Intern

- Forecasted unit demand and optimized reorder points in Excel (XLOOKUP, Power Query), reducing overstock by 15% and saving 120 staff hours annually through better inventory alignment.
- Developed interactive Power BI dashboards (DAX) for gross profit per unit, days-to-turn, and lead-to-sale conversion, reducing reporting cycle time and enabling faster leadership decisions.
- Automated data cleaning and transformation in Python (pandas, NumPy) to integrate SAP/Oracle exports with CRM records, improving reporting accuracy by 20% and saving the finance team 5+ hours weekly.
- Performed variance analysis in Excel (PivotTables, formulas) to compare actuals vs. budgeted sales, identifying revenue leakage and informing process changes that saved 60 analyst hours annually.

PROJECT EXPERIENCE

AI-Powered LinkedIn Content Generator

August 2025 – September 2025

- Designed and deployed an n8n workflow automation pipeline integrating Google Sheets, HTTP APIs, and OpenAI's Chat Model, applying prompt engineering to generate domain-relevant LinkedIn content.
- Built an AI agent node leveraging NLP and retrieval-augmented generation (RAG), orchestrating API calls and database interactions to dynamically process 100+ structured topics into polished, context-aware posts.
- Automated the end-to-end content pipeline, reducing manual drafting time by 70%, improving content consistency, and showcasing a scalable AI-driven ETL workflow for marketing automation.

NBA SQL Project

June 2025 – July 2025

- Queried 10+ seasons of NBA player and team data (50K+ records) in MySQL using JOINS, CTEs, window functions, and aggregations to uncover performance trends and efficiency metrics.
- Designed relational schemas and optimized query execution plans (indexes, filtering, grouping) to improve retrieval speed and ensure analytical accuracy across large datasets.
- Integrated query outputs into Tableau for visualization, enabling interactive exploration of player rotations, win/loss patterns, and team strategy scenarios.
