EDUCATION

Master of Science in Computer Science (University of Texas at Arlington; GPA: 3.67/4)

Aug 2023 - May 2025

Coursework: Advanced Software Engineering, AI, Data Mining, Project Management, Distributed Systems, Web Data Management

Bachelor of Engineering in Computer Science (The NorthCap University, Gurgaon; GPA: 3.7/4)

Jul 2018 - Jun 2022

Coursework: Database Management Systems, Design and Analysis of Algorithms, Software Engineering

TECHNICAL SKILLS

Languages: Java, JavaScript, TypeScript, Python, Node.js, HTML, CSS

Tools: Jira, Git, Docker, Kubernetes, Excel, PowerPoint

Methods: Agile (Scrum), Waterfall, Software Development Lifecycles

Databases: MySQL, Relational Databases

Web Technology: Angular, Spring Boot, REST Apis, J2EE

Cloud Computing Platforms: AWS, GCP

PROFESSIONAL EXPERIENCE

Software Development Engineer, Bitxia Tech Private Limited

Aug 2021 - Aug 2023

- Developed 30+ interactive KPI dashboards with **Angular** and **AG Grid**, cutting load times by 30% and enabling faster funding decisions for startup clients and used **Git** to version control at each stage.
- Delivered real time financial data to **Angular based UI** by designing and deploying **Spring Boot REST APIs** that seamlessly connected with **Oracle** databases, while following **Agile** using **Jira**.
- Automated **KYC**, credit scoring, and loan approvals by integrating **Digio**, **Karza**, and **Mifos** APIs, reducing onboarding time from days to hours and incorporated **JUnit** to reduce resolution time by 38%.
- Reduced post release downtime by **56%** through a robust **Docker** based recovery process, ensuring founders had uninterrupted access to critical funding tools.
- Scaled Stride One's platform to handle **\$5B** in annual startup financing and **150,000+** invoices by improving system throughput, implementing **load balancing**, and **fine-tuning database indexing** for high-volume transactions.

Software Developer | Evren Global Solutions

Jun 2021 - Aug 2021

- Developed and deployed scalable **Directory Platform** using **Node.js** and **SQL**, with **CICD** integration; improved client onboarding time by 22% and implemented debugging routines for uptime assurance.
- Implemented an in-house employee management system with **Node.js**, **HTML**, and **CSS**, streamlining HR processes and reducing administrative workload by 32%.
- Joined forces with senior developers to debug and resolve complex issues during the testing phase, reducing bug resolution time by 38% and improving code quality.
- Designed, developed, and launched a user-friendly matrimonial platform that achieved a **98% customer satisfaction rate**.

Mobile Developer | Blondwaves-ILMURO | Gurgaon

May 2020 - Aug 2020

- Designed two mobile applications on **flutter**, one for models to register themselves and another was for models to create their profiles and evaluate other candidate's profile as well.
- Collaborated with **UX/UI** designers and content writers to deliver a cohesive user experience across platforms, increasing user retention by 18% and reducing bounce rates by 23%.
- Developed key features for a mobile application that enhanced user satisfaction, leading to a **30% increase in app ratings** and **17% rise in daily active users**.

ACADEMIC PROJECTS

Reward Management System | Angular, Spring and Hibernate using microservice architecture.

- Developed a Reward Management System using Angular, Spring, and Hibernate with a microservice architecture, increasing task allocation efficiency by 60% with the **LRU algorithm**.
- Utilized Docker for containerization and deployed on **AWS**, achieving 99.9% uptime and scalable infrastructure.

Conference Management System | React, Express, Node.js, Waterfall, Jira

- Designed and managed academic paper submissions, review tracking, and integrated live conferencing features.
- Developed and optimized user role-based access control and session persistence for conference participants using **JWT authentication**.
- Architected a **RESTful API** layer using Express.js to handle dynamic data transactions securely and efficiently.
- Collaborated via **Jira** to manage timelines, assign tasks, and track progress under the **Waterfall model**.

Restaurant Management System | Angular, Java and MySQL, Agile, Scrum

- Led full project cycle using **Agile** practices to improve project timeline and accuracy.
- Performed unit testing using **JUnit** to ensure backend reliability and reduce bug leakage by 40%.
- Followed SSDLC best practices with code reviews, version control using **Git**, and basic threat modeling for secure data handling.

CERTIFICATIONS AND ACHIEVEMENTS

- Semi Finalist in Imagine Cup Hackathon
- Completed Python certification course from DuCAT

2021
2019
