EDUCATION

University of Central Missouri,
Masters in BigData Analytics and Information Technology

Aug 2022 – Dec 2023
Lee Summit, Missouri, USA

SKILLS

- Languages: Python, R, SQL
- Database: Apache Hadoop, HDFS, MapReduce, Hive
- Data Analysis & Visualization: Pandas, NumPy, Power BI, Tableau, Google Analytics, Excel
- Cloud Platforms: Azure, AWS
- Methodologies: ETL Processes, Data Pipelines, Machine Learning, Agile

PROFESSIONAL EXPERIENCE

Client - Discover, Data Analyst

Jan 2024 – present | Houston, USA

- Utilized SQL, Python, and R for data wrangling, data mining, and advanced statistical analysis on large datasets to deliver actionable insights for business intelligence (BI) solutions.
- Designed and implemented ETL pipelines using Alteryx, Apache Spark, and Python, automating data extraction, transformation, and loading processes, ensuring data integrity.
- Created interactive dashboards in Tableau, Power BI, and Excel to track KPIs, visualize trends, and support real-time decision making for stakeholders.
- Designed, deployed, and maintained cloud-based infrastructure using AWS services, including EC2, S3, Lambda, and RDS, enhancing scalability and performance.
- Developed predictive models using machine learning algorithms such as linear regression, logistic regression, and decision trees, improving forecast accuracy.
- Ensured data accuracy and consistency through data governance, quality assurance, and validation protocols, utilizing SAS and Jupyter Notebook for analysis.
- Collaborated with cross-functional teams to implement data-driven decision-making processes, leveraging insights for process optimization and risk assessment.
- Analyzed customer data using clustering algorithms, NLP techniques, and sentiment analysis to perform customer segmentation, churn analysis, and improve targeting strategies.
- Extracted, cleaned, and processed data from relational databases, data lakes, and NoSQL databases using SQL, BigQuery, and MongoDB, creating structured datasets for comprehensive reporting.
- Applied advanced data visualization techniques with Matplotlib, Seaborn, and Power BI to present findings effectively to technical and non-technical audiences, enhancing data storytelling.

Amazon Development Centre India Pvt Ltd, Data Analyst

May 2019 – Jun 2022 | India

- Created Tableau dashboards to visualize key business metrics, reducing manual reporting time by 10 hours per week.
- Established access controls on AWS to ensure data confidentiality and integrity.
- Reviewed and modified SAS programs to generate customized ad-hoc reports and processed data for business reporting, utilizing AWS CloudWatch for real-time monitoring and proactive issue resolution.
- Trained team members on MySQL best practices and analyzed survey data with SPSS to derive valuable insights.
- Worked with AWS support to quickly troubleshoot issues and optimize performance.
- Managed large-scale databases using Amazon RDS, DynamoDB, and Redshift for high availability and performance.
- Conducted training sessions on AWS tools and best practices for the team.
- Integrated and analyzed data from mobile applications using Google Analytics for Mobile.
- Utilized Python and SQL for data manipulation, model construction, and validation, assisting with automating reporting functions using Power BI.
- Performed data cleaning and validation tasks in Excel to ensure accuracy and consistency.
- Created and maintained database objects such as tables, views, and procedures in MySQL for efficient data management

PROJECTS

Analysis between Professor ratings, course characteristics and University ratings R, ggplot2, Regression, Tableau

- Conducted regression analysis to identify correlations and evaluated various parameters, resulting in a Linear Regression model that predicts professor ratings with approximately 80% accuracy.
- Created a Tableau dashboard to visually represent these correlations, enhancing interpretability.

Movie Recommender System -Python

- Performed exploratory data analysis using Python and Jupyter Notebooks on the MovieLens dataset containing 1.5 million rows.
- Employed neighborhood-based collaborative filtering algorithms to compare User-to-User, Item-to-Item, and hybrid recommendation approaches.
- Developed a tailored movie recommendation system for returning users based on these analyses.
