SUMMARY

Results-driven Business Data Analyst with over 3 years of experience in the healthcare, finance, and technology sectors, specializing in data analysis, reporting, and business process optimization. Skilled in gathering and translating business requirements into actionable insights, designing and developing interactive dashboards using Tableau and Power BI, and performing advanced data analysis using SQL, Python, and R. Adept at leading gap analysis, root cause analysis, UAT support, and data validation initiatives, with a strong focus on regulatory compliance (HIPAA) and data quality. Proficient in cloud and big data technologies including AWS, Databricks, Redshift, Snowflake, and AWS Glue. Experienced in Agile/Scrum and Waterfall methodologies, with a proven track record of delivering data-driven solutions that enhance operational efficiency, reduce error rates, and support executive decision-making.

SKILLS

Methodologies: Agile/Scrum, Waterfall

Languages & Data Processing: SQL, Python, R, Spark

Project Management Tools: MS Project, MS Excel, MS SharePoint, Jira, Microsoft Visio

Analysis & Techniques: SWOT Analysis, Cost/Benefit Analysis, GAP Analysis, Root Cause Analysis, JAD

Cloud & Big Data Technologies: AWS, Databricks, AWS Redshift, Snowflake, AWS Glue

Documentation & ERP Systems: BRD (Business Requirements Document), FRD (Functional Requirements Document), SRS (Software Requirements Specification), MS Dynamics Nav, QuickBooks, NetSuite, Xero, JD Edwards

Data Analysis & Business Intelligence Tools: Tableau, Power BI, SOLVER, SAS, Google Analytics, MongoDB

Operating Systems: Windows, Linux

EXPERIENCE

Business Data Analyst, United Healthcare Group, USA

May 2024 – Present

- Collaborated with cross-functional teams to gather and analyze business requirements, leading the development of a Claims Data Optimization dashboard using SQL, Python, and Tableau, which improved claims processing efficiency and reduced denial rates.
- Designed and implemented data models in SQL Server to consolidate patient claims, eligibility, and provider datasets, ensuring HIPAA compliance and enhancing data quality.
- Developed interactive dashboards and reports in Tableau to visualize key metrics such as claim rejection rates, claims turnaround time, and patient satisfaction indices for executive stakeholders.
- Conducted gap analysis and root cause analysis on claims denials and billing discrepancies using Python (Pandas, NumPy), uncovering key patterns that led to reduction in denial rates within the first quarter.
- Conducted data validation and cleansing activities across multiple sources (internal EMR systems, insurance databases) using Excel (Pivot Tables, VLOOKUP, Power Query) to ensure accurate reporting and analytics.
- Supported UAT (User Acceptance Testing) phases by developing test cases and validating report outputs against business rules, coordinating closely with QA and DevOps teams.
- Created Requirement Traceability Matrices (RTMs) and maintained comprehensive documentation including BRD and FRD, while presenting key insights to leadership through PowerPoint and Tableau Storyboards, enabling effective data-driven decision-making.

Business Data Analyst, Freddie Mac, USA

May 2023 – April 2024

- Collaborated with cross-functional teams (Risk Management, Underwriting, and Data Engineering) to gather and document business requirements for enhancing the loan portfolio risk analysis and reporting system, utilizing Jira and Confluence for tracking deliverables.
- Leveraged SQL and Python (Pandas, NumPy) to analyze large-scale mortgage loan datasets, uncovering trends in delinquency, prepayment risk, and loan defaults, which informed targeted risk mitigation strategies for portfolio optimization..
- Designed and developed interactive dashboards in Tableau and Power BI to provide real-time insights into portfolio health, risk exposure, and loan performance KPIs for executive leadership.
- Worked closely with stakeholders to define data validation rules and business logic, ensuring data integrity and accuracy in monthly risk reports and predictive models.
- Automated ETL pipelines for loan data ingestion from Oracle and AWS Redshift using Python Scripting and AWS Glue, reducing data processing time.
- Participated in UAT (User Acceptance Testing) by preparing test scenarios, validating data workflows, and ensuring that enhancements met business expectations before deployment.

Data Analyst, Experion Technologies, INDIA

July 2020 – August 2021

- Collaborated with cross-functional stakeholders to gather and document business requirements for modernizing legacy data systems and enhancing client reporting, using JIRA and Confluence for task tracking and documentation.
- Conducted comprehensive data analysis using SQL and Python (Pandas, NumPy) to identify gaps, inconsistencies, and improvement opportunities in client operational datasets.
- Designed and validated interactive dashboards and ad-hoc reports in Power BI to improve data visibility across marketing, finance, and operations teams, resulting in reduction in reporting turnaround time.
- Supported data integration activities by mapping source-to-target fields during ETL process migrations to AWS Redshift and Snowflake environments, collaborating with data engineering teams.
- Led stakeholder workshops and UAT (User Acceptance Testing) sessions to ensure new reports and dashboards aligned with business objectives and usability standards.
- Ensured data governance and compliance standards by performing regular data audits and participating in the creation of data validation rules.

EDUCATION

Masters in Engineering Management, Trine University, *Angola, IN*, USA

Aug 2021 – May 2023

Bachelors in Mechanical Engineering, JNTU, Hyderabad, *Telangana*, INDIA

June 2016 – Dec 2020
