

MYTHILI CHELAMALA

Java Full Stack Developer

✉ mythili.ch1198@gmail.com ☎ +1 3305543710 📍 Kent, Ohio 🔗 LinkedIn 🐙 GitHub

Profile Summary

Java Full Stack Developer with 5+ years of experience designing and building distributed, scalable, fault-tolerant, and cloud-native applications and service oriented microservices. Proven expertise in real-time data processing, front-end development and designing real-time, low-latency backend systems. Strong background in object-oriented design principles, memory management, scripting technologies, handling cloud infrastructure, conducting code reviews, and implementing best practices for backend development with strong attention to detail and problem solving ability. Committed to continuous learning, cross-functional collaboration, and delivering user-centric IT solutions.

Education

Master of Science in Computer Science, Kent State University

Aug 2023 – Dec 2024 | Kent, Ohio

Experience

CareFirst BlueCross BlueShield, Java Full Stack Developer

Feb 2025 – Present | Baltimore, Maryland

- Performed end-to-end development of enterprise healthcare applications using Java 17, Spring Boot, and RESTful/GraphQL APIs, applying TDD practices across distributed systems
- Migrated monolithic claims processing components to serverless Lambda functions on AWS, improving scalability and lowering infrastructure costs, along with utilizing AWS (EC2, EKS, RDS, IAM, S3) for various operations
- Introduced Terraform and Infrastructure as Code for environment provisioning across dev, staging, and production environments
- Optimized relational and non-relational databases (PostgreSQL, MongoDB) and API performance using advanced data structures and caching algorithms, improving response time by 32%
- Integrated Elasticsearch for full-text search capabilities, powering search functionality with high query volumes and low latency
- Configured AWS API Gateway to manage routing, authentication, and throttling, improving API reliability and security for thousands of concurrent member requests
- Deployed Spring Boot and Java web applications on Apache Tomcat, ensuring high availability and reliable request handling in production environments
- Built React + TypeScript components with Redux Toolkit/Context and Axios interceptors, enabling consistent state management.
- Implemented real-time notification system using Apache Kafka event streaming and WebSockets for instant claim status updates
- Implemented OAuth2 and JWT token-based authentication flows meeting HIPAA security requirements
- Configured CI/CD pipelines using Jenkins for automated testing and deployment, with Datadog, CloudWatch dashboards and Prometheus alerts for system monitoring
- Designed and executed Python scripts for monitoring, log analytics and automated alerting, reducing manual troubleshoot by 40%
- Conduct regular code reviews and implement best practices for unit testing with JUnit and Mockito to maintain high code quality
- Mentor junior developers on React component design, Redux state management and microservices architecture patterns
- Collaborated with Product Owners, QA, and DevOps engineers to break down complex requirements into technical specifications
- Utilized Gen AI tool - GitHub Copilot to generate code, and unit test generation, improving development speed and consistency

JLG Industries, Java Full Stack Developer

May 2024 – Dec 2024 | Pennsylvania

- Led backend migration from legacy SOAP web services to modern gRPC APIs, improving inter-service communication performance
- Developed real-time equipment telemetry dashboard using React and TypeScript, providing operational visibility for service teams
- Automated Azure cloud infrastructure deployment using Terraform scripts, reducing manual configuration errors and time
- Implemented WebSocket connections for bidirectional real-time equipment status updates, replacing inefficient polling mechanism
- Performed MySQL database optimization and query tuning for fleet reporting workflows, significantly reducing batch job runtime
- Containerized multiple Spring Boot microservices with Docker and orchestrated deployment using Kubernetes for high availability
- Collaborated with UI/UX designer to rebuild customer-facing dealer portal based on user feedback and usability testing results
- Implemented Resilience circuit breaker patterns and retry logic for external API integrations to improve system reliability
- Conducted unit and end-to-end automated testing using Selenium/Postman and enabled static analysis with SonarQube
- Created comprehensive RESTful API documentation using Swagger/OpenAPI specification, improving communication with teams
- Participated in Agile methodologies in iterative development cycles, user stories refinement, sprint plannings, backlog refinement, stand-ups, demo sessions, data-driven decision making to prioritize features, in entire SDLC

Cognizant Technology Solutions, Software Engineer

Dec 2020 – Aug 2023 | Hyderabad, India

- Designed and developed data-intensive Java applications following object-oriented programming principles and design patterns for processing large clinical datasets in SaaS based environments
- Built micro-services and RESTful APIs using Java Spring Boot and Node.js, supporting millions of records with high availability
- Integrated REST, SOAP, and gRPC web services with Elasticsearch, improving data retrieval performance for research teams
- Applied software design patterns including Singleton, Factory, and DAO to improve code maintainability
- Utilized Java 8+ Stream API and Lambda expressions for efficient data processing and filtering operations
- Implemented Hibernate ORM with caching strategies to reduce database load and improve query response times
- Managed MS SQL Server and NoSQL (MongoDB) databases, ensuring HIPAA and FDA 21 CFR Part 11 compliance
- Developed front-end code in Angular 8+ and jQuery to retrieve data as JSON Object from controllers in back-end
- Implemented modern JavaScript patterns-async/await, immutability utilities, throttling, and efficient DOM event handling
- Deployed serverless AWS Lambda functions and automated infrastructure using CloudFormation templates
- Followed Test-Driven Development using JUnit, Postman, and Jest, maintaining high code coverage standards
- Participated in Agile (Scrum) ceremonies and used Git for version control communicating effectively with stakeholders
- Used ServiceNow to track defects, on-call alerts, performed root-cause analysis, debugging and enhancement requests, helping maintain strict SLA compliance for clinical trial applications, to hold quality assurance
- Performed technical documentation designs in Confluence and supported regulatory compliance audits

Carborundum Universal, Java Developer

May 2019 – Nov 2020 | Hyderabad, India

- Maintained enterprise Java ERP(J2EE) system managing procurement workflows, inventory management, and invoicing across manufacturing plants using Spring MVC framework and AngularJS for front-end development
- Built and consumed SOAP and RESTful web services for seamless integration with ERP, aligned to web standards and OOP principles
- Optimized SQL queries and stored procedures in Oracle database to improve order lookup and transaction processing performance
- Implemented AJAX asynchronous calls in front-end forms to eliminate full page reloads and improve overall user experience
- Developed 200+ JUnit/Mockito test cases covering ERP workflows, cutting post-release defects by 15%
- Monitored application logs via Logj, proactively identifying and resolving issues in development and production environments
- Assisted in application deployment and support, collaborating with DevOps and other teams for smooth releases

Technical Skills

Languages: Java, JavaScript, TypeScript, Python, SQL, HTML/CSS

Backend: Spring Boot, Spring Security, Node.js, Hibernate, REST APIs, GraphQL, gRPC, Microservices

Frontend: React, Redux, Angular, Bootstrap, HTML, CSS, responsive design

Data & Messaging: PostgreSQL, MySQL, MS SQL Server, MongoDB, Redis, Kafka, RabbitMQ, WebSockets

Cloud & Infrastructure: AWS (Lambda, EC2, RDS, S3, EKS), Azure, GCP, Docker, Kubernetes, Terraform

Tools & Practices: Git, GitHub, Jenkins, Maven, Gradle, JUnit, Mockito, Selenium, Postman, JIRA, Agile/Scrum, TDD, CI/CD Pipelines, Apache Tomcat

IDE: Eclipse, IntelliJ IDEA, Spring Tool Suite (STS), VS code, Visual Studio

Projects

Visualization Dashboard on Taxi Trips, ReactJS, Python, Recharts, js

- Developed a web application to visualize taxi trip data in Chicago, utilizing ReactJS for the front-end and Python for data processing
- Applied exploratory data analysis to uncover trends and insights, while documenting significant findings. Integrated Google Firebase for secure user authentication and created interactive visualizations using the Recharts library

Return Order Management System, ReactJS, Java, Spring boot, REST API, Docker, AWS

- Built a full-stack application by Implementing complex business logic for order processing and status tracking
- Designed database schema in MySQL for efficient data management and deployed on AWS using containerization on Docker

Neural Network Analysis on Heart Stroke Prediction, Python, SQLite, ML Models

- Formulated a prediction tool that calculates the probability of heart stroke for a person based on the person's lifestyle factors by incorporating artificial neural networks, to provide precautionary measures to patients in advance by implementing ML algorithms
