PROFESSIONAL SUMMARY

Data Analyst with 4+ years of experience utilizing **SQL, Python, and Power BI** to transform complex data into actionable insights that drive business improvements. Expert in designing **ETL pipelines**, **automating workflows**, and creating dynamic data visualizations. Proven track record of delivering improvements in operational efficiency and supporting data-driven decision-making in healthcare and logistics sectors.

EXPERIENCE

Data Analyst

Molina HealthCare | Sept 2023 – Present

- Developed and maintained **ETL** pipelines using **SQL** to integrate multi-source healthcare data into centralized warehouses, improving data availability and enabling real-time business insights.
- Streamlined **ETL** workflows and automated cleansing with **SQL** and **Python**, cutting latency by 20% and manual effort by 40%.
- Performed advanced data analysis with **Python (Pandas, NumPy, Seaborn)** and **SQL** to identify anomalies, utilization trends, and opportunities that supported business decisions.
- Created dynamic, interactive dashboards using **Power BI** to visualize complex datasets, enabling stakeholders to monitor real-time performance metrics and KPIs.
- Automated reporting workflows using **Python and Excel (VBA, Macros, advanced formulas)**, reducing manual effort by 40% and ensuring consistent, accurate reporting.
- Collaborated closely with **cross-functional teams** to define business requirements, creating customized Power BI dashboards that transformed healthcare data into actionable insights, improving decision-making and operational efficiency by 25%.
- Documented data models, definitions, and **ETL** processes to support **governance**, improve data quality, and enable self-service analytics for business users.
- Developed a custom data analytics platform with **SQL**, and Power BI for real-time reporting and predictive analytics. Integrated **machine learning** models to **forecast** patient demand, improving capacity planning accuracy by 10%.
- Automated data-driven forecasting models using **Python** and **R**, predicting patient admission rates and resource allocation, resulting in more efficient scheduling and a 10% reduction in operational bottlenecks and delays.
- Designed and monitored **key performance indicators (KPIs)** and benchmarks to drive process optimization and support continuous **operational** improvements.

Data Analyst/Transportation Specialist

Amazon Development Center (ROC), India | Aug 2019 – Jul 2022

- Supported **North America and Europe** geographies in optimizing supply chain logistics through data-driven decision-making and operational analytics.
- Analyzed over **1.5M+** scheduling and transportation records using **SQL** to identify inefficiencies, leading to a 30% improvement in delivery accuracy and resource utilization.
- Built and automated **end-to-end ETL** pipelines using **SQL** and **Alteryx** to ingest, clean, and transform large-scale logistics data, improving data processing speed by 25% and reducing manual intervention.

- Developed predictive models in **Python** to forecast shipment demand and optimize scheduling, contributing to improved operational planning and a 15% increase in service reliability.
- Created and maintained dashboards in **Power BI** to monitor KPIs such as compliance, shipment delays, and carrier performance, enabling real-time decision-making and reducing inefficiencies.
- Used **SQL and Excel** to analyze **historical and forecast data**, eliminating redundant truck runs and aligning capacities to improve delivery reliability and reduce costs
- Conducted root-cause analysis on non-compliance and shipment delays using **Excel PivotTables and Python scripts**, driving corrective actions that improved service outcomes.
- Developed and documented **Standard Operating Procedures (SOPs)** for critical logistics workflows like truck addition, cancellation, and scheduling configurations, improving process accuracy and onboarding speed.
- Improved data quality and reporting accuracy by **auditing, cleansing, and normalizing datasets**, ensuring reliable and actionable insights for stakeholders.
- Collaborated closely with IT, business analysts, and key stakeholders to define business requirements, develop data-driven solutions, and implement process improvements that resulted in measurable operational gains.
- Led training sessions for new hires and upskilled teams on process tools, data analysis techniques, and best practices, improving productivity and reducing turnaround times by 35%.

TECHNICAL SKILLS:

- **Programming:** SQL, Python, R, C, VB
- **Data Visualization:** Power BI, Tableau, Matplotlib, Seaborn, Datorama
- **Databases:** Teradata, MySQL, SQL Server, PostgreSQL.
- **ETL & Big Data Tools:** Alteryx, Azure Data Studio, EMR, SSIS, SSRS
- **Tools & Scripting:** Power Query, PowerPivot, Shell Scripting.
- **Other:** Excel (Pivot Tables, Power Query), Microsoft Office Suite
- **Methodologies:** SDLC, Agile, Waterfall, Scrum
- **Domain Expertise:** Healthcare Data Management and E-commerce.

EDUCATION

Masters in information technology – Missouri State University

Bachelor's Computer Science and Engineering - GITAM University

PROJECT

Technology: Internet of Things (IOT) | Mission: Innovative Automatic Street Lighting System

Designed & implemented an IoT-based street lighting solution that dynamically adjusts light intensity based on motion. Used AI models for predictive maintenance, reducing energy consumption and operational costs **Tech used:** Python, SQL, Arduino, LDR sensors, Machine Learning (Decision Trees), IoT frameworks, Embedded C.

CERTIFICATIONS

- Certified in Data Analysis by Microsoft
- Certified in Artificial intelligence (AI) and Business Strategy.
- Certified in Data Engineering Foundations
