SUMMARY

Detail-oriented Cybersecurity Analyst with hands-on experience in cloud security, log analysis, and threat detection. Proven track record of using Python, SQL, and Splunk to identify vulnerabilities, reduce cloud misconfigurations, and support incident detection. Strong communicator with experience across security engineering, vulnerability management, and compliance documentation

PROFESSIONAL EXPERIENCE

Cloud Security Engineer

Jun 2024 – present

Vanguard

- Implemented Python-based fraud detection in AWS SageMaker, revealing a 15% rise in suspicious behavior for early intervention
- Analyzed Azure container logs using KQL queries and developed SQL scripts to enhance security monitoring
- Investigated AWS S3 misconfigurations and collaborated with vulnerability teams to reduce alerts by 30%
- Refactored AWS Lambda code for Splunk compatibility, boosting SPL parsing by 25% and supporting SIEM visibility
- Developed onboarding documentation on cloud and security best practices, reducing onboarding time by 40%

Security Engineer Intern

May 2022 – Aug 2022

PayPal

- Programmed a Ruby script to automate the comparison of employee information and manage GitHub access rights using a proprietary API
- Authored a Python script to aggregate data from various AWS user identities into a unified Splunk inventory for enhanced data oversight
- Analyzed and documented security implications for more than 5 AWS Identity and Access Management products to identify and mitigate potential code vulnerabilities

SKILLS

Tools

Splunk, Kali Linux, Nessus, AWS, Azure, Postman, GitHub Actions, Yaml, Jira, Confluence, Terraform, Agile

Languages & Scripting

Python, Bash, SQL, Ruby, JavaScript, HTML, KQL

Security Practices

Vulnerability Management, IAM, SIEM Monitoring, Incident Detection, DevSecOps

PROJECTS

Vulnerability Management

Jun 2023 – Jun 2023

- Performed credentialed scans using Nessus to flag IAM misconfigurations and patching gaps
- Conducted 10 vulnerability assessments, identifying and assessing security weaknesses, applying patches promptly
- Produced accurate vulnerability reports showcasing exposure and progress in implementing remedies

Fake News Scanner Application - OSINT Tool

Jan 2023 – May 2023

- Led the development of an Open-Source Intelligence (OSINT) scanner for identifying misinformation using Reddit and 4chan APIs
- Achieved 87% detection accuracy through Python-based analysis and integration of NLP techniques
- Designed a front-end interface to improve usability for analysts; documented functionality and security controls in an SRS (Software Requirements Specification)

EDUCATION

Bachelor of Computing, Computer Science

Illinois Institute of Technology

Certifications

ISC(2) Certified in Cybersecurity

CompTIA Security+ (in Progress)

AWS Certified Cloud Practitioner (In Progress)
