

Nabila Noumedem Majio, Sr. Software Engineer

Lanham, MD, 20706, United States, +1 (202) 320 - 9425, nabila.majio6@outlook.com

Nationality	U.S Citizens
PROFILE	Software Engineer with 10 years of experience designing, developing, and deploying scalable web and backend systems. Proficient in Java, Python, JavaScript, and frameworks like Spring Boot, React, Angular, Node.js. Strong background in RESTful APIs, microservices, cloud platforms (AWS/GCP), CI/CD, and SQL/NoSQL databases. Passionate about writing clean, efficient code and solving complex system-level problems currently seeking a Full stack Engineer position.
PROFILE & TECHNICAL SKILLS	• Strong in frontend development with React, Angular, VueJs • Experience with SQL and No-SQL databases, REST, GraphQL, gRPC, WebSocket, SOAP • Strong coding, debugging and problem-solving skills in Python • Experience with the AWS Serverless Computing stack (e.g., Lambda, DynamoDB, S3, SQS, API • Experience in Spring Boot, Flask, FastAPI, Express.js, .NET, Java, Python, JavaScript, TypeScript • Worked with frontend framework React, Angular, Vue.js, Next.js, Tailwind CSS, Material ui • Experience implementing REST and/or Graph APIs, CI/CD, unit testing, • Proficient in DevOps using AWS (EC2, S3, Lambda, RDS), Azure, GCP, Docker, Kubernetes, Helm, Terraform, Ansible, Jenkins, GitHub Actions, GitLab CI/CD • designed, developed, tested, debuged implemented and maintained applications and services including Python, .Net Core, C#, VB.NET, Web API, HTML, JavaScript, XML, JavaScript, TypeScript, React, Angular, VueJS, NodeJs, Bootstrap and more. • Strong testing ability and experience with JUnit, PyTest, Mocha/Chai, Selenium, Cypress Postman • Work with Pandas, NumPy, SQL Analytics, Apache Kafka, Spark, ELK Stack, Prometheus + Grafana, Google Analytics for data handling and analytics. • Strong in FrontEnd and Middleware including Redux, NgRx, Java, Hibernate, HTML, CSS, Javascript, jQuery, AJAX, JSON, and D3. Plotly, Material UI, etc..
EMPLOYMENT HISTORY	
Jun 2024 — Present	Senior Fullstack Software Engineer, Eduworks • Built responsive front-end interfaces using Angular with reactive forms and Angular Material. • Designed and implemented RESTful APIs using Node.js with MongoDB/PostgreSQL integration. • Integrated JWT-based authentication in Angular with route guards and role-based access control. • Developed Express.js middleware for token validation and access restriction across protected routes. • Created complex, dynamic forms with nested controls and custom/async validators in Angular. • Developed corresponding Node.js endpoints to support server-side validation logic. • Handled distributed configuration with Spring Config and secure API gateway using Gateway. • Developed RESTful services using Spring Boot, handling CRUD operations, exception handling, and pagination for long and big data rendering to optimize for performance • Implemented layered architecture with controllers, services, and repositories. • Wrote comprehensive unit tests with JUnit and Mockito for services and repositories.
Dec 2020 — May 2024	Software Engineer, Tenable • Developed scalable backend services using Java 8+, with strong emphasis on Spring Boot, REST APIs, and microservices architecture. • Designed and implemented modular service layers using Spring MVC, Spring Data JPA, and Hibernate ORM for enterprise-grade applications. • Built and maintained CI/CD pipelines for Java microservices using Jenkins, Docker, and Kubernetes. • Worked with MySQL, PostgreSQL, and MongoDB, writing optimized JPQL queries • Refactored legacy monolithic Java applications into microservices, improving deployment agility and scaling. • Applied TDD practices using JUnit, Mockito achieving high code coverage and test reliability. • Integrated backend services with Angular frontends, facilitating smooth RESTful communication and shared validation models. • Developed and maintained high-performance microservices using Java 11+, Spring Boot, and Spring Cloud, with full support for RESTful APIs, load balancing and swagger test. • Implemented asynchronous, event-driven architectures using Kafka and RabbitMQ, enabling scalable background processing and decoupled inter-service communication. • Integrated OAuth2 and JWT-based authentication with Spring Security, supporting federated login (Okta/Auth0) and role-based access control across distributed services. • Mentored junior engineers on Java best practices, design patterns, and clean code principles.

- Built and maintained modular, reusable components using Angular (v10+), TypeScript, and RxJS, enabling reactive state management and streamlined UI logic.
- Integrated Angular frontends with RESTful and GraphQL APIs, implementing HTTP interceptors, route guards, and lazy loading to enhance performance and security.
- Implemented form validation, custom directives, and dynamic forms using Angular Reactive Forms to create user-friendly and accessible input workflows.
- Optimized frontend performance with OnPush change detection, Webpack lazy bundles, and CDN caching, resulting in faster load times.
- Wrote unit and end-to-end tests using Jasmine, Karma, and Protractor/Cypress, achieving high code coverage and ensuring reliable, testable UIs across browsers.

Jun 2017 — Dec 2020

Software Developer III, Progressive

- Designed and implemented RESTful APIs and microservices using Node.js (v14+) with Express.js and TypeScript, enabling high-throughput data pipelines and low-latency endpoints.
- Built ETL pipelines and data processing scripts using Pandas, SQLAlchemy, and Celery, automating data ingestion, transformation, and reporting workflows.
- Built event-driven backend systems using Node.js + Redis/Kafka, enabling real-time data streaming, pub/sub messaging, and async task processing.
- Wrote unit, integration, and load tests using PyTest, unittest,
- Secured Node.js APIs with JWT-based authentication, OAuth2, role-based access control, and rate-limiting middleware
- Optimized application performance with cluster mode and asynchronous I/O patterns,
- Wrote comprehensive tests using Mocha, Chai, Supertest, and integrated CI/CD pipelines via GitHub Actions and Docker for automated deployment and QA.
- Developed and maintained dynamic UIs using React (v17+) with TypeScript, leveraging functional components, hooks, and context API for modular and scalable design.
- Implemented complex async state management using Redux-Saga, handling side effects such as API calls, token refresh, and error recovery with generator-based control flows.
- Built and documented reusable UI components using Storybook, enabling cross-team collaboration, isolated component testing, and visual regression tracking.
- Optimized performance through memoization (React.memo, useMemo), code-splitting with React.lazy, and virtualized lists for large-scale data rendering.
- Integrated with backend services via Axios, handled global errors and loading states with middleware, and implemented responsive design with TailwindCSS and Styled Components.

Nov 2014 — Jun 2017

Software Developer, Microsoft

- Developed and maintained RESTful APIs and web applications using ASP.NET Core (3.1/6/7) and ASP.NET MVC, implementing layered architecture with Dependency Injection, Repository Pattern, and Unit of Work.
- Built Model-View-Controller based applications with Razor views, partial views, and tag helpers, enabling dynamic web pages.
- Secured applications using ASP.NET Identity, OAuth2, and JWT tokens, including role-based access control and external provider integrations with Azure
- Integrated Entity Framework Core for ORM operations, handling migrations, stored procedures, and LINQ-based queries with optimized performance.
- Deployed ASP.NET applications using IIS, Docker, and Azure App Services, with CI/CD pipelines configured via Azure DevOps or GitHub Actions.
- Developed interactive SPA components using Blazor Server and Blazor WebAssembly, sharing C# models and validation rules between client and server layers for consistent behavior.
- Implemented high-performance, strongly-typed APIs using gRPC with ASP.NET Core, enabling efficient communication between microservices with protocol buffers and code generation.
- Leveraged .NET Dependency Injection container, AutoMapper, FluentValidation, and MediatR to streamline service composition, validation logic, and cross-cutting concerns.
- Implemented detailed API versioning, rate limiting, and global exception handling middleware to enforce consistency and improve fault tolerance across public-facing APIs.
- Wrote unit, integration, and performance tests using xUnit, Moq, and BenchmarkDotNet, maintaining test coverage and profiling critical system paths under load.

EDUCATION

Dec 2014

Bachelors of Science

Computer Science
