## CAREER SUMMARY

Results-driven professional with experience in supply chain leadership, logistics management, process improvement, and data science. Skilled in leveraging advanced analytics, machine learning, and cloud technologies to optimize business operations, reduce costs, and improve decision-making. Proven expertise in project and program management with success in leading cross-functional teams and delivering data-driven solutions across healthcare, insurance, finance, retail, and e-commerce domains. Adept at translating business challenges into actionable insights using Python, SQL, AWS, and advanced visualization tools. Recognized for problem-solving, communication, and leadership abilities.

## AREAS OF EXPERTISE

- **Supply Chain & Logistics:** Demand Forecasting, Inventory Optimization, Procurement, Vendor Management, Process Automation, KPI Tracking
- **Project & Program Management:** Agile Methodologies, Stakeholder Management, Change Management, Risk Mitigation, Process Improvement
- **Data Science & Analytics:** Python (Pandas, NumPy, scikit-learn, TensorFlow, NLP), SQL, Data Engineering & ETL, Big Data Analytics, Statistical Modeling, Predictive Analytics
- **Visualization & Reporting:** Power BI, Tableau, Matplotlib, Seaborn
- **Cloud & Advanced Tools:** AWS (S3, Redshift, Lambda), Git, APIs, Automation Frameworks
- **Domain Expertise:** Healthcare Analytics, Insurance Analytics, Financial Data Analysis, Retail & E-commerce Analytics, Research & Survey Analytics
- **Soft Skills:** Leadership, Strategic Thinking, Communication, Collaboration, Problem Solving, Time Management

## PROFESSIONAL EXPERIENCE

### Halvik Corp, USA

Jun 2024 - Present

#### Data Scientist

- Developed and deployed predictive models using Python, SQL, and TensorFlow that enhanced supply chain demand forecasting accuracy by 23%, directly improving inventory planning and reducing shortages.
- Automated ETL pipelines for healthcare and insurance datasets, cutting 40+ hours of manual work monthly and ensuring data availability for analytics and reporting.
- Built AWS cloud solutions (S3, Redshift, Lambda), cutting infrastructure costs by 18% while ensuring high data throughput.
- Designed executive dashboards in Power BI and Tableau, enabling leadership to monitor KPIs in real time and accelerate decision-making speed by 30%.

### C&S Wholesale Grocers, USA

Jul 2023 - Mar 2024

#### Data Scientist Intern

- Conducted advanced analytics on retail and e-commerce sales data to uncover seasonal patterns, boosting revenue by 12% through optimized promotional targeting.
- Applied NLP on customer feedback to detect sentiment and key themes, helping the business improve service quality and increasing customer satisfaction scores by 15%.
- Assisted in the design of predictive financial models to assess portfolio risks, improving accuracy of investment decisions and supporting strategic planning.

### Mindtree Limited, India

Aug 2021 – Aug 2022

#### Data Scientist

- Created machine learning models for fraud detection using Python and AWS, raising detection accuracy by 28% and minimizing financial losses from fraudulent claims.
- Partnered with insurance teams to develop analytics pipelines that reduced claims processing errors by 20% and improved compliance reporting.
- Implemented SQL and Tableau-based dashboards to improve supply chain visibility, driving 17% higher on-time deliveries and operational transparency.
- Collaborated with stakeholders to define business problems and deliver data science solutions aligned with strategy.

### Bloomberg LP, India

Jan 2020 – Dec 2021

#### Data Scientist Intern

- Processed and cleaned large healthcare and research datasets using Python (Pandas, NumPy), reducing preparation time by 25% and improving data reliability.
- Conducted survey analytics to identify key health and policy trends, generating insights that informed internal research recommendations.
- Prototyped an inventory optimization model for supply chain operations, cutting stockouts by 10% during testing and improving planning accuracy.

## PROJECTS

### Customer Personalization and Recommendation Engine

- Built a recommendation system using collaborative filtering and clustering on large-scale retail transaction data.
- Increased cross-sell opportunities by 15% and improved targeted marketing strategies for customer segments.
- Implemented real-time recommendations using AWS Lambda and API integration with retail platforms.
- Validated model accuracy with precision/recall metrics, ensuring reliable personalized suggestions.
- Delivered interactive dashboards in Tableau to visualize customer behavior and recommendation outcomes.

### Patient Readmission Prediction (Healthcare Analytics)

- Developed predictive models (Logistic Regression, Random Forest) to identify patients at high risk of 30-day readmission.
- Reduced readmission rates by providing early alerts and actionable insights for care management teams.
- Conducted feature engineering on EHR data, incorporating demographics, clinical history, and treatment patterns.
- Evaluated performance with AUC/ROC and confusion matrix, achieving high model accuracy and recall.
- Integrated risk scores into clinician dashboards, improving patient monitoring and decision-making efficiency.

### Intelligent Chatbot for Customer Support

- Designed a chatbot with NLP (spaCy, NLTK, TensorFlow) to automate FAQs and support tasks in insurance services.
- Reduced average response time by 40%, improving overall customer satisfaction.
- Trained the chatbot on historical queries, reaching 85% accuracy in intent classification and entity recognition.
- Integrated with CRM systems using APIs to provide real-time customer account information.
- Deployed the chatbot on web and mobile platforms, handling over 1,000 queries daily with minimal downtime.

### Fraud Detection Using Machine Learning

- Built fraud detection models with XGBoost, Random Forest, and Logistic Regression on claims and transaction datasets.
- Improved fraud detection accuracy by 28% compared to legacy rule-based systems.
- Engineered features including transaction frequency, anomaly patterns, and historical claim behavior.
- Designed real-time fraud alerting pipeline integrated with SQL databases and API services.
- Delivered fraud analytics dashboards in Power BI for compliance officers and finance executives.

### Credit Risk Prediction for Loan Approvals

- Developed a credit scoring model using Logistic Regression and Gradient Boosting for loan applicant profiling.
- Enhanced decision-making speed and reduced loan defaults through better risk assessment.
- Processed and engineered features from credit history, income levels, and transactional behavior.
- Achieved strong model validation (AUC/ROC > 0.85) ensuring regulatory compliance in financial decisions.
- Built interactive dashboards in Tableau to visualize applicant risk categories and approval trends.

## EDUCATION

- **Masters of Science in Data Science and Analytics** **Aug 2022 – May 2024**  
Florida Atlantic University, FL, USA
- **Bachelor of Technology in Computer Science** **Jun 2017 – Mar 2021**  
GITAM University, Andhra Pradesh, India
