

SUMMARY

Accomplished Data & Business Intelligence Analyst with over 5 years of experience driving data-informed decision-making across diverse industries. Expert in designing and optimizing scalable ETL pipelines using tools such as Informatica PowerCenter, SSIS, Azure Data Factory, and Databricks, and adept at cleaning and modeling complex datasets with Python and SQL. Highly skilled in developing actionable, interactive dashboards in Power BI and Tableau to deliver real-time insights for stakeholders. Proficient in statistical analysis, predictive modeling, and machine learning to uncover trends and forecast outcomes. Recognized for collaborating with cross-functional teams, ensuring data quality and compliance, and translating analytical findings into strategic recommendations that enhance operational efficiency and drive measurable business results

SKILLS

Programming & Query: Python, SQL, R

Cloud Platforms: Microsoft Azure, AWS, Snowflake

Data Warehousing & Modeling: Snowflake, Azure Synapse, dbt (data build tool), ETL/ELT, Data Modeling, Data Governance

Data Engineering & Integration: Informatica PowerCenter, SSIS, Azure Data Factory, Databricks, Hadoop, Spark, Airflow

Databases: SQL Server, MySQL, PostgreSQL, MongoDB, Snowflake

Visualization: Tableau, Power BI, Advanced Excel (Pivot Tables, Power Query), Looker, Qlik Sense

Machine Learning & Analytics: Scikit-learn, TensorFlow, Statistical Analysis, Predictive Modeling, A/B Testing, NLP

Tools & IDEs: Visual Studio Code, PyCharm, Jupyter Notebook, Git, JIRA

Soft Skills: Analytical Thinking, Problem-Solving, Communication, Leadership, Time Management

Operating Systems: Windows, Linux

EXPERIENCE

Business Intelligence Analyst | CVS Health, Connecticut

Aug 2023 - Present

- Achieved 10% improved data processing efficiency by developing and optimizing scalable **ETL pipelines**, utilizing **SQL Server**, **SSIS**, **Azure Data Factory**, and **Databricks**, employing efficient queries and stored procedures to ingest, transform, and consolidate high-volume healthcare data.
- Enhanced data-driven insights, **reducing data errors by 8%**, leveraging **Python (Pandas, NumPy)** and **PySpark** to perform advanced data cleaning, preprocessing, and feature engineering on large healthcare datasets, also implementing data validation and quality checks.
- Enabled real-time clinical decision support by architecting and implementing a real-time data streaming and processing solution using **Azure** services, such as **Event Hubs** and **Azure Stream Analytics**, leveraging **SQL Server** for data storage and real-time querying, improving data availability for critical applications.
- Ensured HIPAA compliance and data security by implementing and enforcing stringent data governance policies and encryption protocols within **Azure** services, utilizing **SQL Server**'s robust security features to safeguard sensitive patient information.
- Reduced data-related incidents by 18%** by developing **automated data validation frameworks**, creating efficient scripts to proactively identify and resolve **data quality** issues.
- Enhanced data scalability and optimized query performance by **collaborating with cross-functional teams** to migrate legacy healthcare data systems to a modern data platform based on **Azure Synapse Analytics**, optimizing data migration and performance.
- Enhanced data-driven decision-making by designing and deploying interactive **Power BI** dashboards, leveraging **DAX** for complex calculations and **Power Query** for data shaping, directly querying databases to monitor **KPIs**.
- Improved efforts to enhance patient care by applying advanced data mining and **machine learning techniques** using **Python** and extracting data to analyze patient health data and predict readmission risks.
- Promoted data integrity and compliance by championing the adoption of **data quality** best practices and **data governance frameworks**, enforcing data consistency and integrity across integrated datasets.
- Improved resource allocation by partnering with the Data Science team to apply predictive modeling techniques, leveraging extracted and transformed data, to forecast healthcare resource requirements and optimize staffing levels and reduce operational costs.

Data Analytics Consultant | Deloitte, India

Jul 2019 – Jun 2022

- Automated end-to-end ETL pipelines using **Informatica PowerCenter** (mappings, workflows) and optimized **SQL Server** processes to extract, transform, and load real-time financial data from multiple sources, implementing data quality checks and error handling that improved integration efficiency and reduced data errors by **18%**.
- Cleaned, standardized, and merged multi-source financial datasets using **Python (Pandas, NumPy)** and advanced **SQL** (window

functions, CTEs), ensuring high-quality, analysis-ready data for portfolio risk modeling, forecasting, and regulatory reporting.

- Engineered a robust portfolio risk analytics framework by calculating **Value at Risk (VaR)**, asset correlations, and sector volatility in **Python**, enabling real-time exposure monitoring and supporting proactive risk mitigation strategies.
- Applied **Random Forest** and **Gradient Boosting** models (**Scikit-learn**) to optimize asset allocation, improving portfolio performance and risk-adjusted returns for institutional clients.
- Conducted **A/B testing** and hypothesis testing using **Python (Stats models)** and **SQL** to refine portfolio rebalancing strategies, driving more consistent returns through data-driven dynamic adjustments.
- Designed, deployed, and optimized advanced **Tableau** dashboards with live **SQL Server** connections, leveraging calculated fields, **dynamic filters**, **parameters**, and **incremental data loading** to deliver real-time, interactive insights on portfolio performance and risk metrics, improving decision-making speed by 12% and reducing dashboard load times.
- Automated financial reporting workflows by integrating **SQL Server** data with **Advanced Excel** (Power Query, Pivot Tables), reducing manual reporting time by 16% and streamlining quarterly portfolio review processes.
- Led **collaboration with portfolio managers**, risk analysts, and business stakeholders to translate analytical findings into actionable recommendations, directly influencing investment strategies and **risk controls**.
- Presented complex financial insights and dashboard findings to senior leadership, facilitating strategic discussions and accelerating decision cycles.
- Ensured compliance with financial regulations and internal policies by developing robust **data governance frameworks**, **implementing data validation checks**, and supporting audit documentation, **reducing compliance risk** and improving data integrity.
- Initiated process improvements by introducing automated anomaly detection and reconciliation in ETL workflows, further minimizing data discrepancies and enhancing overall reliability of financial reporting.

PROJECTS

E-Commerce Sentiment Intelligence Using Transformer Models

Developed a sentiment analysis pipeline for e-commerce customer reviews from Amazon and Twitter using pre-trained transformer models (BERT, RoBERTa, GPT, XLNet, DistilBERT). Evaluated model performance with accuracy, precision, recall, and F1 score, and visualized attention weights to interpret model decisions. Created interactive Power BI dashboards to present sentiment trends, enabling product and marketing insights that identified customer pain points and optimized offerings. This project demonstrated a potential 10% improvement in customer satisfaction and a 21% uplift in conversion rates through data-driven strategies based on real-time feedback.

Customer Churn Prediction and BI Enablement in Telecommunications

Designed and implemented a predictive analytics solution to forecast customer churn in the telecom sector using Logistic Regression, Random Forest, and Gradient Boosting models with extensive feature engineering. Benchmarked models using accuracy and precision and automated the integration of churn risk scores and customer segmentation into BI dashboards for actionable insights. Enabled targeted retention campaigns and resource optimization, resulting in a simulated 32% reduction in churns and an 11% increase in customer lifetime value.

EDUCATION

Master of Science in Data Science - University of New Haven, West Haven, Connecticut, USA

Bachelor of Technology in Mechanical Engineering - SASTRA University, Chennai, Tamil Nadu, India

CERTIFICATION

Microsoft Azure Data Engineer Associate (dp-203)

HackerRank Certified SQL (Advanced)
