

NAGA CHANDANA ADUSUMALLI

+1(316) 869-6886 || a.chandana1709@gmail.com || <https://www.linkedin.com/in/chandana-n-1a3a61208/>

EDUCATION:

Masters in Computer Science | Wichita State University, KS | **GPA: 3.97**

Jan 2023 – May 2024

Specialized Courses: Applied Data Science, Software Analysis Methodologies, Machine Learning

Bachelors in Computer Science | JNTUK, India | **82%**

Aug 2018 – May 2022

Specialized Courses: Data Structures & Algorithms, Linux, Database Management System

SKILLS:

Python, Java, PySpark, MySQL, Microsoft SQL Server, Snowflake, Linux Azure, Azure Data factory, Azure Databricks, Azure Synapse, Azure Data Lake, Data Modeling, ETL/ELT Processes, Data Warehousing, Data Pipeline Optimization Data, Microsoft Power BI, Tableau, alteryx.

PROFESSIONAL EXPERIENCE:

Data Engineer || Maxil Technology Solutions Inc || Illinois, Chicago || Remote

May 2024 – Present

- Having good experience in **data ingestion**, transformation, and loading (ETL) processes using ADF.
- Experience in monitoring and managing data pipelines using **ADF monitoring tools and Azure Monitor**. proactive measures taken for identifying and resolving issues in data pipelines.
- worked on various **stored procedures**, and functions to manipulate and retrieve data.
- Designing and implementing ETL pipelines using **Databricks** for data extraction, transformation, and loading.
- Worked on various tools such as Power BI for Data analysis.
- Integrating Databricks with other Azure services, such as **Azure Storage, Azure SQL Database, and Azure Data Lake Storage**, to create comprehensive data solutions.
- Successfully designed and optimized data models within **Snowflake**, enhancing query performance and overall system efficiency.
- Integration of Snowflake with **ETL tools**, ensuring seamless data extraction, transformation, and loading (ETL) processes.

Data Science Intern || CommScope India | Hyderabad, India

Sep 2022 – Dec 2022

- Created Python-based scripts for extracting and transforming high-volume network data.
- Worked with AWS Lambda and Glue to automate processing tasks.
- Documented data workflows and contributed to the development of internal reporting tools.
- Built SQL queries and views to support ad-hoc data analysis requests by business users.
- Assisted in setting up cloud infrastructure for data ingestion and storage, improving system scalability.

PROJECTS:

Manhattan City Development Dashboard (Tableau, Tableau Prep, API Integration, Python)

- The focus of the project is to build an interactive dashboard for city of Manhattan to develop the city.
- We used API key token to scrap the data from web where I collected housing and disaster details of Manhattan from the US Bureau website. These datasets include factors like disaster, population, and occupation that affect housing in the area.
- Our main aim was to collect the data from different official websites like US Bureau, FEMA and NWS and we have Combined, Cleaned, and organized the data using Tableau Prep and created a flow and built dashboards using Tableau.
- This project helped government and stakeholders what is the requirement for the city of Manhattan and what needs to be developed by getting valuable insights from our dashboards.

Demographics Analysis of Credit Card Spending (Python, Pandas, Scikit-learn, Tableau)

- Analyzed 1M+ Kaggle credit card records to explore demographic-based spending patterns.
- Applied Linear Regression, Logistic Regression, and Random Forest models, achieving 91% accuracy with Random Forest.
- Conducted ANOVA and T-tests, finding no statistically significant gender-based spending differences.
- Built Tableau dashboards to display customer behavior insights.

Inventory Management System (CRUD App) (MySQL, JavaScript, Python, HTML5, CSS3)

- The purpose of this project is to develop a web-based CRUD (Create, Read, Update, Delete) application for managing an e-commerce platform's product inventory.
- This application will allow administrators to efficiently handle product details, track stock levels, and manage product categories, ensuring smooth operations and upto-date inventory information.
- The application will use relational databases to store and manage data, ensuring data integrity and consistency.

End-to-End Data Pipeline and Visualization (Apache Airflow, Git, Power BI)

- Pulled datasets from Kaggle using Airflow and built automated pipelines. Cleaned and exported final datasets for Power BI dashboards showcasing key KPIs. Used Git for version control and pipeline management.

CERTIFICATIONS:

Azure Data Engineer Associate (DP203)

Azure Fundamentals (AZ900)

AWS Certified Cloud Practitioner
