OBJECTIVE

Aspiring Full Stack Software Engineer with hands-on experience in Python, React, cloud platforms (AWS, Azure), and full-stack development. Skilled in data structures and algorithms, deploying and optimizing cloud-based solutions.

EDUCATION

Masters of Computer system analysis , University of South Florida, FL	Sep 2023 - May 2025
Bachelor of Communication Engineer , JNTUH College of Engineering, India	Aug 2017 - Jun 2021

EXPERIENCE

Research Assistant University of South Florida	Sep 2024 - Dec 2024 <i>Tampa, FL</i>
--	---

- Developed a full-stack web application using **React** and Django for a cybersecurity education platform powered by large language models (LLMs). Integrated Pinecone **vector database** to enable semantic search, automated grading.
- Designed and implemented **ETL** pipelines using Apache Spark and **Databricks** to process and transform unstructured healthcare data, supporting **data warehousing** and real-time business intelligence dashboards.
- Managed state with Redux, Babel, and Context API, integrated REST APIs, and improved test coverage by 25%, reducing production issues through unit testing with Jest, React Testing Library, Karma, and Jasmine.

Full Stack Software Engineer Phoenix Business Consulting	Aug 2021 - Jul 2023 <i>Hyderabad, India</i>
--	--

- Automated reporting workflows using **Python** and **SQL**, and supported ad-hoc analysis by designing reusable schema and ingestion logic for data warehouse environments.
- Collaborated in requirement gathering and contributed to modern application development by writing and executing test cases, participating in **UAT and API testing**, and supporting production deployments.
- Automated the provisioning of **AWS** infrastructure with **Terraform**, streamlining the setup of EC2 instances, RDS Aurora databases, and S3 buckets, which cut **deployment time by 15%**.
- Participated in Agile ceremonies including daily standups, sprint reviews, and retrospectives; actively contributed to continuous delivery pipelines (CI/CD) and code quality through peer code reviews and unit testing.

Junior Software Engineer Extreme informatics pvt.Ltd	Jan 2020 - Jul 2021 <i>Hyderabad, India</i>
--	--

- Built responsive UIs from client Figma specs, accelerating development cycles by 20% across devices and browsers. Developed admin control components using React and Redux to streamline usability.
- Streamlined the ETL deployment process by containerizing jobs with **Docker**, ensuring consistent execution across environments. Managed version control and facilitated smooth updates using **AWS Elastic Container Registry**.

PROJECTS

AI Tutor - Developed a full-stack chat application using React.js (frontend) and Django (backend) for a cybersecurity project, leveraging LLMs for real-time threat intelligence and anomaly detection.

SKILLS

Programming & DataProcessing:	Python, SparkSQL, PostgreSQL, JavaScript, React.js, WebGL, Django, Hadoop, Pandas, Datastage, Linux, WordPress, FastAPI, Flask, Golang
Cloud & Databases:	AWS, Azure DataFactory, Databricks, GCP, Snowflake, Kubernetes
Tools & Visualization:	VS Code, Git, Jupyter Notebook, Docker, Terraform, Power BI, Tableau, Looker

EXTRA-CURRICULAR ACTIVITIES

- First Place at DevCon 2024** for winning the Build With AI Hackathon with an innovative AI solution.
- First Place at TADHACK OPEN 2024** for developing a product to generate vCon and redact PII.
