SUMMARY

Full Stack Developer with 3 years of experience building scalable backend systems, cloud-native applications, and automation frameworks. Proficient in C++, Python, Java (Spring Boot), SQL, Shell Scripting, Flask, Django, and React.js, with expertise in cloud platforms like AWS and Azure. Skilled in designing ETL pipelines, integrating CI/CD workflows using Docker and Jenkins, and deploying secure, serverless solutions across dynamic environments. Experienced in Agile teams delivering robust RESTful APIs, workflow automation, and data-centric services across healthcare, logistics, and industrial domains.

TECHNICAL SKILLS

• Programming & Scripting	:	Python, C++, SQL, Shell Scripting, Java, Spring Boot, PL/SQL, JavaScript, HTML, CSS, React.js, Flask, Django.
• Cloud Platforms & Data Warehousing	:	AWS (Lambda, S3, Redshift, Glue), Azure (ADF, SQL, Synapse), GCP (BigQuery)
• ETL & Workflow Automation	:	Apache Airflow, AWS Glue, Azure Data Factory, SSIS, Talend, DataBricks
• DevOps & CI/CD	:	Docker, Jenkins, GitLab, GitHub Actions, Terraform, Kubernetes, CloudFormation
• Data Processing & Analytics	:	Pandas, NumPy, Matplotlib, Seaborn, scikit-learn, Apache Kafka, Spark
• Testing & QA	:	PyTest, JUnit, Selenium, Postman, Unit Testing, Integration Testing, UAT
• Data Visualization & Reporting	:	Power BI, Tableau, AWS QuickSight, Grafana, Splunk
• Databases	:	PostgreSQL, MySQL, SQL Server, Oracle, BigQuery, Snowflake, RDS
• Version Control & Collaboration	:	Git, GitHub, Bitbucket, JIRA, Confluence
• Agile & Scrum	:	Scrum Master, Jira, Confluence, Sprint Planning, Kanban

PROFESSIONAL EXPERIENCE

UBER	Sept 2024 - Current
Software Engineer	
- Designed, built, and optimized Python, C++ and Java applications to process high-volume data, improving system performance by 30%. - Developed and deployed cloud-native applications on AWS, utilizing services like S3, Lambda, and Cloud Functions. - Implemented CI/CD pipelines using GitLab, Jenkins, and Docker, automating deployment processes and reducing downtime. - Remediated robust RESTful APIs using Python (Flask) and Java (Spring Boot) for seamless data exchange between systems. - Engineered Python-based APIs and ETL workflows for processing industrial sensor data and operational metrics in real-time. - Designed and deployed full-stack solutions using Python (Flask), C++ for backend services and React for frontend interfaces. - Delivered data-intensive solutions by integrating AWS RDS, Redshift, and SQL databases for real-time analytics. - Collaborated with the DevOps team to optimize cloud infrastructure and ensure secure deployment of micro services. - Ensured code quality and system reliability by applying unit testing and integrating testing methodologies.	
CIPLA	Jun 2021 – Nov 2022
Python Developer	
- Supported the Regulatory Data Integration Project by building Python-based APIs using Flask and Django, enabling secure access to drug safety and clinical trial datasets for regulatory teams. - Built and scheduled ETL pipelines with Airflow and AWS Glue to ingest and clean data from over 15 legacy systems and regulatory databases, accelerating compliance reporting. - Developed interactive dashboards in Power BI and Tableau to monitor real-time metrics on pharmacovigilance, adverse event rates, and site-level reporting performance. - Automated ingestion of prescription and lab data via Apache Kafka and AWS S3, improving batch reliability and reducing manual extraction delays across CRO partners. - Used PostgreSQL and Azure Synapse to optimize storage and querying of high-volume patient trial data, reducing query latency for clinical dashboards. - Implemented CI/CD pipelines using Jenkins and GitHub Actions, improving deployment frequency of analytics modules used by over 10 departments. - Deployed scalable Python microservices to AWS Lambda for event-driven tasks like adverse event classification and regulatory notification generation. - Collaborated with QA, medical affairs, and compliance teams to validate the integrity of data pipelines and ensure full traceability of drug safety insights across systems. - Containerized core analytics services using Docker, enabling reproducible environments for ongoing analytics and model retraining. - Partnered with React.js developers to build internal tools for clinical reviewers, linking frontend dashboards to real-time backend endpoints.	

ADANI

Software Engineer Intern

Jan 2021 - June 2021

- Assisted in the development of Python-based ETL frameworks with C++ to process data from multiple industrial systems and integrate it into the central database.
- Created Power BI dashboards to visualize logistics and asset performance, improving decision-making for operational managers.
- Performed backend data transformations using SQL and integrated cloud-based solutions with AWS Lambda for automation.
- Automated reporting and data extraction tasks, reducing manual interventions and streamlining operational workflows.
- Collaborated with senior developers to enhance data security and optimize API workflows for efficient data exchange
- Contributed to team efforts in developing cloud-based solutions using AWS S3, improving data storage and accessibility.

EDUCATION

University of North Carolina – Charlotte, NC

Master of Science in Computer Science

Jan 2023 - May 2024

P.V.P.Siddhartha Institute Of Technology – Vijayawada, AP

Bachelor of Science in Computer Science

Jun 2017 – Jun 2021
