

Naitik Prajapati

Java Developer

+1(469)288-6648 | naitikprajapati257@gmail.com | TX 76013

SUMMARY

Java Developer with around 3+ years of experience in designing, developing, and deploying full-stack web applications. Proficient in Java, JavaScript, HTML/CSS, and frameworks and libraries. Experience in web applications using Spring Framework, Hibernate, and Maven. Specialized in microservices architecture and cloud-based deployments on AWS. Delivered high-quality code and collaborating with cross-functional teams.

SKILLS

Methodologies: Agile/Scrum

Web/Application servers: JSP, AWS, Servlets, Java Script

Programming Languages: Java, JavaScript, HTML, CSS, Python, Go

Frameworks/Libraries: J2EE, Spring Boot, Angular, React, Node.js

Database Management: Oracle, MySQL, PostgreSQL, MongoDB, Redis, DynamoDB

Version Control: GIT, SVN

Web Services: RESTful API, SOAP, GraphQL, Kafka

Front-end Technologies: Bootstrap, jQuery, Ajax

Cloud Technologies: Azure, AWS (S3, Glue, Athena, Quick Sight, Lambda, EC2, Redshift, Dynamo DB, Cloud Formation, Cloud Watch)

IDEs/Tools: IntelliJ IDEA, Eclipse, Visual Studio Code

Testing: JUnit, Selenium, Mockito

DevOps tool: CI/CD, Kubernetes, Jenkins, Docker, Ansible, Puppet, Terraform

Operating Systems: Windows, Linux, UNI

EXPERIENCE

Java Developer, Berkshire Hathaway, Houston, TX, US

January 2023-Present

- Engaged in Agile development processes, including daily stand-ups, sprint planning, and retrospectives.
- Analyzed AWS SDK for Java to connect applications to AWS services including S3, RDS, and DynamoDB.
- Launched AWS QuickSight for better data visualization; this has enhanced user engagement by 20% through timely insights.
- Experience in writing Junit test cases for applications using the mocking framework Mockito using Test-Driven Development (TDD) technique, ensuing in a 25% reduction in bugs and improved code reliability.
- Implemented Angular framework to create responsive web applications with effective user interfaces, enhancing user experience and increasing user engagement by 40%.
- Maintained and updated REST APIs based on the business needs to ensure that always available at 99% and flexible in a rapidly evolving environment.
- Performed testing and debugging, resulting in 95% code coverage and decrease in time to fix problems.

Software Developer, Infosys, Richardson, TX, US

March 2021-December 2022

- Developed Front-end using Angular.
- Liaised with Core Java applications.
- Established Back-end using spring boot.
- Debugged the front-end code and made sure report data is populating correctly at the front end.
- Settled a code that converts the JSON, HTML, and CSV data extracted from GIS base maps into an Excel sheet with grid format.
- Advanced functionality in which shaped a button click event to activate the cursor for Spatial query.
- Captured the draw event on a map identified the matching features from the layer within the area and prompted the user for selection.
- Written a query to get the result based on user selection and exported the result to a PDF file.

Java Developer, CitusTech, Irving, TX, US

April 2018-February 2020

- Guided all phases of the Software development life cycle (SDLC) using Agile Methodology.
- Incorporated Model-View-Controller pattern to implement microservices for user authentication RESTful APIs. With the help of Spring Boot, accelerated the development of API's by 35% upon joining the team.
- Integrated the use of Spring Security to secure web applications through authentication and authorization, thus minimizing security reducing the number of identified vulnerabilities by 30%, and improving the protection of user data.
- Employed front-end components using React.js and connected to back-end services, improving user experience and growing application performance by 30%.
- Designed server-side applications that are scalable and efficient using Node.js, utilizing an event-driven approach and a non-blocking I/O model to support 10,000+ concurrent connections and handle high loads.
- Conceptualized AWS Services like EC2, S3, RDS, and Lambda for the deployment, scaling, and managing cloud applications, resulting in the optimization of the infrastructure cost by 40% and an enhancement of the application scalability and performance by 30%.
- Executed MySQL as the backend database for web applications to support high traffic and large data volumes, providing efficient data processing and reducing response time by 40%.
- Expert in DynamoDB as a NoSQL database service for full-stack development, for optimal data management and retrieval in front-end and back-end applications.
- Applied Terraform for infrastructure as code (IaC) for the creation and management of cloud resources, ensuring scalability, reliability, and efficiency, resulting in a 25% decrease in deployment times.
- Transformed GraphQL to optimize data querying and manipulation, resulting in improved accuracy and flexibility of data retrieval and optimization of data-driven applications, enhancing query efficiency by 20%.

EDUCATION

Bachelor of Science, Information Technology

Gujarat Technical University, India

April 2019
