

NAMAN JAIN

Edison, NJ, USA | +1 (201) 423-8426 | namannj297@gmail.com | www.linkedin.com/in/naman-jain29

SUMMARY

Computer Science graduate with experience in backend development, QA automation, and data workflows. Skilled in Python, SQL, Selenium, and PyTest, with exposure to ML pipelines and cloud tools. Passionate about building scalable systems and bridging development with quality and data.

EDUCATION

Montclair State University

Master's, Computer Science

Aug 2023 - May 2025

University of Mumbai

Bachelor's, Computer Engineering

Sep 2019 - Jul 2023

PROFESSIONAL EXPERIENCE

Deloitte Consulting LLP

Quality Assurance Engineer

Jan 2025 - Present

Mechanicsburg, PA, USA

- Developed and executed 400+ manual test cases across UI, functional, and regression testing for enterprise-level web applications, ensuring high-quality deliverables that support robust software infrastructure.
- Automated critical regression tests using Selenium WebDriver with Python, reducing testing time by 30% and enhancing repeatability in testing workflows that can translate to the automation of ML model validation processes.
- Built reusable PyTest functions and implemented page object models to improve test efficiency, demonstrating strong problem-solving skills applicable to algorithm implementation.
- Validated backend functionality and large dataset operations with SQL, an asset for maintaining the integrity of data pipelines in machine learning environments.
- Performed REST API testing using Postman with automated validations, emphasizing reliability and performance in system integration that supports end-to-end ML deployments.
- Collaborated in Agile ceremonies and coordinated closely with developers and business analysts, reinforcing cross-functional team-work essential for translating data science requirements into production-ready code.
- Managed defect tracking with JIRA, ensuring timely resolution and documentation, a practice that reinforces systematic quality assurance in software used for ML model monitoring.
- Integrated test scripts within Jenkins pipelines for continuous integration, laying a foundation for streamlined automation workflows and infrastructure improvements.

Traya Health

Software Engineer Intern

Jan 2022 - Jan 2023

Mumbai, MH, India

- Designed and implemented backend modules in Python with SQL integration for data-driven tasks, adhering to production-grade coding standards that parallel best practices in developing algorithms for enhanced predictive models.
- Developed and tested REST APIs and crafted reusable scripts to streamline recurring processes, demonstrating an ability to create automated workflows which is key for improving ML model deployment cycles.
- Collaborated in team discussions, shared updates via Confluence, and maintained version control with Git, highlighting effective communication and agile project management crucial for cross-functional ML projects.
- Focused on writing clean, testable code while incorporating iterative feedback, reflecting a commitment to continuous improvement that resonates with engineering initiatives to enhance model performance through quantitative analysis and machine learning techniques.

PROJECTS

Course Management System – API Development & Automation Testing

- Developed a RESTful API using FastAPI for managing student enrollments, course scheduling, and faculty assignments.
- Implemented JWT-based role-based authentication to enforce secure access control across Admin, Faculty, and Student roles.
- Created a comprehensive PyTest test suite for unit, integration, and functional testing across all endpoints.
- Automated validation of POST, GET, PUT, DELETE operations using Postman and PyTest with JSON Schema validation.
- Built mock test data factories for dynamic request payloads and database seed scripts.
- Verified backend logic using raw SQL queries on PostgreSQL and validated constraints, joins, and foreign keys.
- Dockerized the application and test suite for consistent CI environment deployment.
- Integrated tests in a GitHub Actions CI pipeline, running automated tests on each pull request.
- Achieved 90%+ test coverage with coverage reports and used logging for debug traceability.

Bug Tracker App (Developer & QA Role Simulation)

- Built a simple bug tracking web app with login access for Admin, Developer, and QA users.
- Created and tested backend APIs using Node.js (Express) and MongoDB, with Swagger and Postman for documentation and testing.
- Automated key UI workflows like bug reporting and status updates using Cypress for end-to-end testing.
- Wrote backend unit and integration tests using Mocha and Chai to validate API functionality.
- Simulated a real Agile environment using GitHub Projects and deployed the app on Render with CI via GitHub Actions.

SKILLS

- **Programming Languages:** Python, Go Lang, C++, Java, SQL, JavaScript, HTML/CSS, TypeScript
- **DevOps & Automation:** Selenium, PyTest, Cypress, Postman, Docker, GitHub Actions, Jenkins
- **Cloud & Databases:** AWS, MongoDB, PostgreSQL, Swagger
- **Methodologies & Concepts:** Agile, Scrum, CI/CD, OOP, Machine Learning, Quantitative Analysis
- **Tools and Framework:** React, Node.js, Flask, JIRA, Confluence, Figma, Datadog, Tensorflow
