PROFESSIONAL SUMMARY

Data-driven professional with experience in analytics, data engineering, and visualization across multiple sectors. Skilled in Python, SQL, and BI tools, delivering actionable insights that improve efficiency and decision-making.

SKILLS

Languages: Python (pandas, NumPy, PySpark), SQL (PostgreSQL, MySQL, Window Functions, CTEs), R, Git, Java, Scala

Databases: PostgreSQL, MySQL, Elasticsearch, MongoDB, DynamoDB, Cassandra, Redis, Vector Database, Snowflake

Cloud: Git, Docker, AWS (EC2, S3, Lambda, Redshift), Azure

Data Visualization: Tableau, Power BI, Matplotlib, Seaborn, XGBoost, ETL/ELT, Data Modeling

Analytical Skills: Statistical Analysis, A/B testing, Exploratory Data Analysis, Time Series Analysis, Excel (pivot tables)

ML/AI: scikit-learn, GenAI Data Processing (LangChain, Vector DBs), TensorFlow, PyTorch, Hugging Face

PROFESSIONAL EXPERIENCE

DMC Consultants | Software Analyst Intern

July 2025 - Present

- Consolidated and cleaned project data (budgets, timelines) in a **PostgreSQL** database using **Python** and **SQL**, ensuring accurate inputs for forecasting and analysis.
- Created **Power BI** dashboards to track project KPIs (cost variance, schedule adherence) across multiple sites, enabling managers to identify and mitigate about 15% of potential delays

Envirta Technologies | Data Analyst

Apr 2023 - May 2025

- Analyzed historical sales and customer datasets using **Python (pandas)** and **SQL** to identify purchasing trends, informing promotional strategies that boosted conversion rates by about 5%.
- Developed interactive **Tableau** dashboards to visualize key e-commerce metrics, allowing stakeholders to track sales trends, customer segments, and churn patterns, supporting promotions that boosted conversion rates by 5%.
- Automated weekly sales and inventory reports with **SQL** and **Excel (pivot tables)**, reducing manual reporting time by 50% and ensuring timely delivery of performance metrics.
- Engineered scalable ETL pipelines with **Apache Spark (Scala)** to integrate multi-source e-commerce data into a centralized **PostgreSQL** warehouse, improving throughput by 30% and enabling faster analytics.

Amazon | Software Engineer

Aug 2022- Mar 2023

- Analyzed buyer transaction logs using **SQL** and **Python** to detect policy-violating behaviors, flagging about 200 suspicious transactions monthly for fraud investigation.
- Built an automated ETL pipeline with **AWS Lambda** and **Python** to load **S3** transaction logs into **Redshift**, cutting manual data processing by 20 hours per month.
- Created interactive **Tableau** dashboards to visualize buyer behavior metrics (flagged transactions, abuse rates), enabling stakeholders to monitor trends and improving issue resolution efficiency by about 15%.
- Implemented data quality checks (using **SQL** constraints and **Python** scripts) on buyer datasets to ensure 99% accuracy, significantly reducing downstream errors in analytics.

EDUCATION

Master of Science in Data Science and Analytics | New England College, New Hampshire

July 2026

Bachelor of Science in Computer Science | San Jose State University, California

May 2022

PROJECTS

Predictive Analytics for Product Recommendations | Envirta Technologies

Jan 2024

- Developed a recommendation engine using collaborative and content-based filtering in **Python (pandas, NumPy, scikit-learn)** to suggest products based on user behavior, improving simulated recommendation relevance by 15%.
- Built ETL pipelines to clean, aggregate, and transform user and product datasets in **PostgreSQL**, enabling scalable data processing and integration into dashboards for stakeholders to monitor recommendation trends efficiently.
- Implemented performance evaluation metrics (precision, recall, hit rate) on the recommendation engine using **Python**, providing actionable insights on model accuracy and guiding iterative improvements to increase user engagement.
