Experience

DMV Music Alliance, DC

Project Lead – Health and wellness projects

March 2024 – Present

Collaboration | Project Management | Program Design & Support

- Subject matter expert supporting initiative to develop awareness about health-related issues in music community
- Create & develop programs for musician centric health concerns and rehabilitation
- As Project Lead, elevate health and wellness program as organizations first ever initiative towards improving awareness regarding rehabilitation and support for health concerns
- Design & develop plan for online and in-person health expo to improve engagement
- Outreach & collaborate with community members (low-income population) seeking support for health care concerns and connect them to providers for better outcome

Nest Health, LA

Healthcare BI Data analyst

June 2024 – Nov 2024

Power BI reports | Support business decisions | Collaborate with operations team | Support product team

- Report using Power BI app – Loading in-house EHR data, payer's data, non-clinical data; Transform and create relationships between tables; DAX queries to create measures for reports; Develop visualization to observe trends
- Communicate insights with senior leadership managing nursing staff to discuss business needs for the decision making
- Present daily reports to nurses to ensure efficient operations of daily practice
- Query snowflake datasets to create ad hoc analysis reports to support operations team's goals
- Microsoft DevOps to document project developments and tasks on a day-to-day basis
- Work in Visual Studio Code to facilitate version control for different report files used in Power BI app

ASCO's CancerLinQ, VA

Senior Biomedical Data Specialist

Jan 2023 – Feb 2024

Product Development | Project Lead | Project Management | Data Insights Documentation | Data Analysis | Data Management

- Molecular data analysis Project
 - Data analysis and data wrangling to investigate presence of meaningful genomics data in different EHR data sources
 - Document the progress and summary of result sets and develop process plan (flow charts) to guide Informatics team to navigate through their tasks.
 - Present a demo to guide Informatics team in mapping data to relevant code system ensuring data quality is maintained for product development
 - Map the genomics data to relevant codes and code systems to harmonize and transform data to be integrated into product
 - Facilitate communication between stakeholders in the project to discuss possible risk factors and roadblocks
 - Collaborate with the product team, engineering team to develop action plan to manage data quality issues
 - Document feedback to make improvements and create a plan to mitigate issues with the progress of the project
 - Provide subject-matter expertise in mapping data for data quality evaluation by the product team
- Data quality improvement for Encounters in EHR data
 - Implementation of the encounter department mapping to relevant codes (ICD Codes) to add value to practice's data in the quality measures calculation by improving data quality
- Data quality analysis for labs data
 - Implement solution by creating a post processing plan for labs data to improve data quality by mitigating duplication issue
- Focus on the EHR data quality improvement that contributes to product design for customers like oncology practices, pharmaceutical companies, researchers, oncologists etc.
 - Create SQL queries to perform data quality evaluation tests for electronic medical records
 - Design parameters for the acceptable data quality measures to provide credit to customers for their data
 - Data transformation from different data pools to filter valuable insights that can be helpful for data analysis
 - Perform quality assurance tests by writing SQL queries in different schemas and interpreting data visualizations
- Provide support to project management team by performing best practices to processes data ingestion from different source systems and maintaining data transformation pipeline
- Collaborate with the teams to solve analytical questions related to a software product and support customers

Namrata Narad

Maryland | <https://www.linkedin.com/in/dr-namrata-narad> | namratanarad@gmail.com | (857)-277-3230

- Writing SQL queries for data exploration to evaluate conformance and completeness of the EHR data
- Create data analysis reports to support and evaluate best efforts towards scientific paper publishing collaborations

Biomedical Data Specialist

July 2019 – Dec 2022

Data Analysis | Reporting | Data Quality Assurance | Data Management | Vendor Management

- Analyze & evaluate migration to FHIR (HL7) data standardization for Laboratory data
- SQL scripting to query large database of clinical data like electronic medical health records to perform ad-hoc analysis in excel
- Data processing by mapping data concepts to appropriate code system to normalize data to be consumed and improve data quality
- Manage & integrate incoming incremental new data to the existing data model to provide unified data for the end user
- Implement data privacy compliance standards to protect the identity of patients
- Act as a liaison and subject matter expert between medical professionals, researchers and other personnel in the different departments and provide expert opinion
- Perform data quality checks to ensure new incremental data meets quality standards using tools like Looker & SQL querying
- Identify root cause of the bugs, design a solution to fix it, test procedures and quality standards to allow smooth operation
- Implement optimization and maintenance of data structure on Amazon Web Services (AWS) cloud computing
- Perform quality assurance analysis by using visualization tool like Looker

Sanofi-Genzyme, Framingham, MA

Jan 2019 – June 2019

Bioinformatician

Statistical Data Analysis

- Build single cell RNA sequencing (10x & icell8) data analysis pipeline using R
- Data visualization (t-sne, Umap) using R & gene interaction network using "Cytoscape"
- Statistical analysis (Next-Gen sequencing- NGS data) data like Differential expression analysis to create gene signature to identify drug targets
- Implement Computational Biology for Drug Discovery tool to priorities significant genes in relation to understand their important interactions with other datasets
- Weekly reports and presentations

Commense, Cambridge, MA

May 2018 – Sept 2018

Bioinformatician

Data Analysis | Machine Learning

- Meta-analysis to study microbial succession in early life of human gut microbiome
Data wrangling from public databases like EBI, NCBI, Qiita, followed by data integration and exploratory data analysis using Jupyter Notebook- Ipython & R programming language
- Data mining/machine learning project
Train a model using random forest algorithm to analyze feature significance from microbiological, clinical, genomics, and environmental dataset for predicting a disease condition in a cohort of infants
- Data visualization using tools like tableau, ggplot2 in R
- Database management to maintain the data quality while increments kept increasing the size of data
- Retrieve sequence data using Amazon web services like EC2, S3 cloud computing
- Present reports on the progress of the project & scientific papers to participate in Journal club on weekly basis

Northeastern University, MA

Jan 2017 – Dec 2017

- Worked to provide support to help special needs students with their course work and classes
- Worked as liaison between different stakeholders for student initiative organization for women in STEM
- Helped create a newsletter for monthly published digital newsletter for students on campus
- Coordinate events organized by the organization for students on campus

Clinician and practice manager, India, Republic of Maldives

Sep 2007 - Oct 2013

Patient Care | Healthcare Operations

- Worked with special needs patients like down syndrome cases helping them with dental care needs and public health education
- Worked as a general practitioner and clinical operations manager in a multi-specialty hospital with dentistry as a one of the

Namrata Narad

Maryland | <https://www.linkedin.com/in/dr-namrata-narad> | namratanarad@gmail.com | (857)-277-3230

departments which had an average patient intake of 30-40 patients a day

- Perform dental treatment procedures like case history, diagnosis, surgery, fixed and removable prosthodontics, cosmetic and preventive restorations, endodontics, oral prophylaxis, and sub-gingival curettage
- Manage and supervise the supporting staff, assistants, and autoclave sterilization processes to ensure smooth operation

Skills

Programming/Scripting Languages: R, Python, Perl, Bash scripting, SQL

Operating Systems: Mac, Linux, Windows

R: Data modification & retrieval; Fitting regression model and ANOVA model; Apply packages for clustering analysis & logistic regressions; Implement packages like dplyr, tidyverse, ggplot2, Bioconductor etc; Implement SQL and mongo DB database management packages

Python: Data cleaning & extraction; Retrieve information from public databases; Recursive programming; Merge datasets; Jupyter Notebook- Ipython; Implement packages like pandas, numpy

SQL: Creating queries in Amazon Redshift SQL & PySpark

Data visualizations: Tableau, Looker, Power BI

Domain Knowledge: Healthcare/EHR data, clinical trial data, claims data, Laboratory data, Pharmacy data, Encounter data, metadata, Practice Data Implementation / Vendor Management, Big data, Big pharma, Data migration, ETL process, Project & Program Management, Client onboarding / implementation, data visualizations and reports

EHR – NextGen, Epic, Cerner, Mosaik, Allscripts, Athena, Oncoemr, Elsevier, Cancer registry, ICD-10-CM, LOINC, CPT, HCPCS

Technical skills - SAS studio, JIRA, Agile methodology, DevOps, Visual Studio Code, Snowflake, AWS S3, Redshift, Excel (creating reports, formulae, pivot etc)

Education

Business Analytics Certification - Harvard Business School Online Certificate Program, Boston, MA

Nov 2022

Coursework: Business Analytics – Quantitative methods used to analyze data and make better management decisions

Master of Science, Bioinformatics - Northeastern University, Boston, MA

Dec 2018

Coursework: Molecular Cell Biology, Statistics for Bioinformatics, Bioinformatics Seminar, Bioinformatics Methods, Programming in Bioinformatics, Advanced-Genomics, Data science (Data collecting, storing, and retrieving)

Bachelor of Dental Surgery - Maharashtra University of Health Sciences, Nagpur, India

Sep 2007

Coursework: Human Anatomy and Physiology, Microbiology, Biochemistry, Pharmacology, General Medicine
