SUMMARY

Data Analytics Specialist with around **5 years** of experience in leveraging **AWS**, **GCP**, and **Python** to automate data pipelines, optimize workflows, and deliver actionable insights. Proficient in **data transformation**, **machine learning**, and **data visualization** using **Tableau**, **Power BI**, and **SQL**. Adept at driving business decisions and improving operational efficiency.

SKILLS

- Technical: Python, R, C++, Java, SQL, NoSQL, T-SQL, ReactJS, Statistics, Linear Programming, Regression, Classification.
- Tools: Tableau, Power BI, Snowflake, GCP, AWS, Alteryx, PySpark, QlikView, SSMS, MySQL, Adobe Analytics, ERwin.
- Soft Skills: Problem Solving, Creativity, Attention to Detail, Work Ethic, Team Player, Result-Oriented, Time Management.

CERTIFICATIONS

- [Tableau Certified Consultant](#), issued by Tableau
- Google Cloud Certified [Associate Cloud Engineer](#)
- [Exploring and Preparing Your Data with BigQuery](#), offered by Coursera

WORK EXPERIENCE

Data Analyst | Nurturings, Boston, MA

Apr 2025 – Present

- Automated ETL pipelines using **Airflow** to clean, transform, and load pre/post-survey data from Excel, SPSS into Snowflake.
- Developed optimized SQL queries in **Snowflake** to integrate and transform multi-source data for visualization readiness.
- Designed dynamic **Tableau dashboards** to compare pre- and post-survey results, segmenting participants by demographics such as age, income, and education to uncover meaningful patterns and training impact across groups.
- Derived key insights and pain points from survey results to support management's strategy in enhancing training programs.

Research Assistant | Harvard University, Boston, MA

Feb 2025 – April 2025

- Applied **NLP** and **text processing** to extract, transform, and structure corporate carbon commitments from reports.
- Developed and maintained a SQL database on **GCP** to track net-zero targets supporting sustainability research efforts.
- Transformed net-zero commitments into structured data columns capturing critical information; created clear visualizations in **Looker** to facilitate comparison, analysis, and informed decision-making aligned with research objectives.
- Collaborated with Salata Institute researchers to analyze climate data, refine methods, and contribute to publications.

Data Analytics Consultant | Safety Kleen, Boston, MA

Sep 2024 – Dec 2024

- Led a capstone project analyzing railcar transportation cycles by designing the data model in **ERwin** and implementing **ETL workflows** using **AWS Glue** and **S3**, guided by the model, with ad-hoc analysis in **AWS Athena**.
- Implemented SQL-based transformations in **Redshift** to create essential new columns, such as calculating time per phase, ensuring accurate data processing and supporting insights for optimizing transportation cycle performance.
- Created interactive **Tableau dashboards** visualizing cycle times, refinery offloading, and customer rating trends effectively.
- Delivered recommendations on refinery-client pairings and resource allocation, reducing idle time, increasing efficiency.

Business Intelligence Developer | Solenis, Wilmington, DE

Apr 2024 – Aug 2024

- Automated API calls and transformed multi-source data using **Python**, loading it into SSMS to support SAP migration.
- Optimized **SQL views** in **SSMS** to extract and structure data, improving performance and streamlining data workflows.
- Designed interactive **Power BI dashboards** using DAX and Power Query to transform data, visualize KPIs, rank performance, and enable year-over-year comparisons, providing real-time insights that supported strategic business decisions.
- Automated SSMS data pipelines and refreshes to maintain workflows and support accurate, timely reporting across teams.

Business Intelligence Developer | Dr. Reddy's Laboratories, Hyderabad, India

Jun 2022 – Aug 2023

- Automated end-to-end ETL workflows using **AWS Glue** and **Lambda**, transforming and storing diverse data sources in **S3**, and using **AWS Athena** to enable real-time insights and significantly enhance cross-team reporting efficiency.
- Processed large datasets with **PySpark**, applying distributed computing for efficient transformations and faster analytics.
- Developed optimized SQL queries in **AWS Redshift** to combine multiple tables and extract relevant data for dashboards.

- Created interactive **Power BI dashboards** to track **finance data** in drug manufacturing, monitoring cost changes from initial allocation to final production, providing actionable insights for process optimization at multiple levels.

Data Analyst | Ericsson, Noida, India

Jul 2020 – Jun 2022

- Developed and maintained **Tableau dashboards** for GIS visualization of telecom KPIs, integrating geospatial data across granularities and locations, enabling stakeholders to assess network performance and health for decision-making.
- Transformed and processed large-scale telecom data in **Google Cloud Platform (GCP)** by designing efficient SQL queries in **BigQuery**, using subqueries, CTEs, and joins to integrate multiple tables and ensure accurate KPI calculations.
- Automated end-to-end data workflows using **Alteryx and Tableau Prep**, minimizing manual effort, accelerating reporting speed by 20%, and delivering streamlined, accurate data preparation for improved performance analysis and insights.
- Administered **Tableau Server**, managing user groups, data refresh schedules, site handling, and dashboard performance optimization, ensuring efficient resource utilization and adherence to best practices across all levels of data access.

Research Assistant | Birla Institute of Technology and Science, Pilani, India

May 2019 – Jul 2019

- Applied **game theory and optimization algorithms** in projects like energy trading, mobile data offloading, and government tender allocation, improving cost efficiency from initial bids to optimized outcomes.
- Developed **blockchain-based secure networks** using **Solidity** to code smart contracts, ensuring secure transactions, transparency, and tamper-proof execution across all projects, allowing only authorized participants to enter the system.
- Created a **machine learning model** to predict foodborne outbreaks, helping authorities identify potential threats early.
- Published **five research papers** in **IEEE, Wiley, and Springer**, covering applications of **game theory, blockchain security, and machine learning** in optimization and public health; publications are available on my [Google Scholar profile](#).

PROJECTS

Influencer Marketing Enhancement through Data Analysis and Visualization (Python, NLP, MySQL, Tableau)

- Conducted a comprehensive analysis of Twitter influencers using NLP in Python to extract sentiment, key discussion topics, and engagement patterns, optimizing influencer partnerships for targeted marketing strategies during product launches.
- Designed an interactive [Tableau dashboard](#) to visualize influencer performance, engagement patterns, and tweet frequency trends, enabling stakeholders to derive insights and drive targeted, data-driven campaign optimizations.
- Processed and integrated datasets in MySQL, delivering a report with strategic recommendations on influencer impact, audience trends, and optimized marketing to enhance brand visibility.

Optimizing Brand Perception with LLM Insights and Traditional Metrics (Python, NLP, Tableau)

- Led a project with [Jellyfish](#) (a digital marketing company) to analyze brand performance by applying advanced Natural Language Processing (NLP) techniques on LLM-generated narratives (ChatGPT, Gemini, Llama), uncovering critical insights into key themes such as affordability, innovation, and customer sentiment that drive brand perception.
- Identified and analyzed brand narratives to uncover emerging patterns, customer sentiment shifts, and opportunities for market differentiation, delivering actionable insights to improve brand positioning and optimize marketing strategies.
- Built interactive [Tableau dashboards](#) to visualize LLM mentions, traditional marketing metrics, and awareness trends, enabling clear comparisons across industries such as Airlines, Cars, Banks, Beers, and Mobile Devices.
- Conducted cross-category analysis to highlight discrepancies between LLM mentions and traditional rankings, uncovering insights into brand performance influenced by factors like customer loyalty, domestic origin, and market trends.
- Provided actionable recommendations to Jellyfish to align marketing strategies with LLM narratives, ensuring optimized content relevance and improved visibility on AI-driven platforms for enhanced audience engagement.

EDUCATION

Northeastern University, Boston, MA

Sep 2023 – Dec 2024

Master of Science in Business Analytics

Jaypee Institute of Information Technology, Noida, India

Jul 2016 – Jun 2020

Bachelor of Technology in Information Technology
