

Nandavardhan Reddy Guvvala
Phone: +1 (512)-387-6680
Email: nandavardhanreddyguvvala@gmail.com

PROFESSIONAL SUMMARY:

- Data Analyst with 4 years of experience working across finance, retail, and healthcare domains to deliver data-driven insights that support real-world decisions.
- Skilled in designing and automating ETL pipelines using Python, SQL, Alteryx, and Informatica for faster, cleaner reporting workflows.
- Built interactive, executive-ready dashboards using Power BI, Tableau, QuickSight, and Looker to track KPIs like SLAs, claim resolution, and customer satisfaction.
- Strong command of cloud platforms including AWS (S3, Redshift, Glue, Athena), Azure (SQL DB), and Google BigQuery for scalable data processing and warehousing.
- Proficient in SQL and DAX for advanced data modeling, calculated fields, and dynamic reporting in Power BI.
- Applied Python (Pandas, NumPy, Matplotlib) for data wrangling, exploratory analysis, and visual storytelling to uncover trends and insights.
- Built and deployed machine learning models for fraud detection, segmentation, and customer risk scoring using Scikit-learn and SciPy.
- Automated data refreshes and dashboard workflows using AWS Lambda, EC2, and Power BI Service—saving hours of manual effort each week.
- Ensured data accuracy, integrity, and security with validation checks, row-level security (RLS), and audit-ready datasets for compliance needs.
- Known for close collaboration with business, engineering, and operations teams to turn data into tools people actually use—bridging the gap between data and decisions.

PROFESSIONAL EXPERIENCE:

Huntington National Bank – Texas, USA

July 2024 – Present

Data Analyst

Responsibilities:

- Ingested multi-source customer service and transaction data into AWS S3, using structured and semi-structured buckets for scalable storage, and orchestrated ETL workflows using Informatica, Alteryx, and Python-based scripts.
- Processed and transformed data in AWS Redshift using optimized SQL queries for aggregating KPIs like workforce forecasting, SLA adherence, and vendor performance, while ensuring high query efficiency for dashboard consumption.
- Used AWS EC2 instances to schedule and run Python scripts that supported daily data refreshes and post-processing tasks for reporting layers.
- Created and published interactive dashboards in Tableau to visualize operational efficiency metrics, customer interaction trends, and claim status insights, enabling near real-time visibility for business leaders.
- Developed custom Tableau calculations, filters, and drilldowns that allowed teams to dynamically explore customer service outcomes, vendor scorecards, and high-priority issue clusters.
- Integrated machine learning model outputs (e.g., customer risk scores, fraud detection flags) into Tableau dashboards by combining Python (Pandas, Scikit-learn) outputs with Redshift tables.
- Collaborated with compliance and vendor teams to define reporting KPIs, validate dashboard accuracy, and ensure alignment with regulatory requirements and internal SLA targets.
- Leveraged Snowflake and Google BigQuery for regulatory data warehouse needs and cross-cloud integrations, while applying data validation, governance logic, and performance tuning across the full stack.

Environment: AWS S3, AWS Redshift, AWS EC2, AWS IAM, Snowflake, Google BigQuery, Python (Pandas, NumPy, Scikit-learn, Matplotlib, Seaborn), SQL (Redshift, Snowflake, BigQuery), Tableau, Tableau Server, Informatica, Alteryx, Excel (Advanced), Google Cloud Functions, Git, Jupyter Notebooks

Kroger - Texas, USA

Nov 2023 - June 2024

Data Analyst

Responsibilities:

- Ingested large-scale retail and financial datasets from SQL Server, Azure SQL DB, and BigQuery into AWS S3, using structured naming conventions and metadata tagging for scalable and organized data storage.

- Built automated ETL pipelines using Python and SQL to transform raw source data and load it into AWS Redshift, enabling consistent and analytics-ready reporting tables for downstream consumption.
- Developed Amazon QuickSight dashboards for real-time tracking of customer support performance, vendor responsiveness, and transactional risk, using visuals with filters and drill-downs for dynamic stakeholder exploration.
- Used Amazon Athena to directly query S3-stored data for lightweight reporting scenarios, reducing latency and improving ad hoc analysis capability.
- Integrated machine learning outputs—including customer segmentation and anomaly detection scores—into QuickSight visuals, using Python (Pandas, Scikit-learn) to drive insight into fraud trends and behavioral patterns.
- Enabled automated refreshes and real-time workflows in QuickSight by leveraging scheduled queries in Redshift and Lambda-based triggers, improving the timeliness of KPI reporting.
- Partnered with business teams to define key metrics and compliance reporting requirements, ensuring dashboards addressed both operational and AML use cases while maintaining secure access through IAM role-based permissions.

Environment: AWS S3, AWS Redshift, Amazon QuickSight, Amazon Athena, AWS Lambda, AWS IAM, Python (Pandas, NumPy, Scikit-learn, Matplotlib), SQL (Redshift, Athena), Azure SQL Database, Google BigQuery, SQL Server, Power BI, Tableau, Looker, Excel (Advanced), Jupyter Notebooks, Git

Kaiser Permanente – Bangalore, India

March 2021 – May 2023

Data Analyst

Responsibilities:

- Ingested and integrated healthcare data from multiple sources including Azure SQL Database, SQL Server consolidating it into a centralized reporting layer for analytics.
- Used Power BI Desktop to model data and build star schemas, creating clean relationships between patient records, claims, and insurance plan tables for robust, scalable reporting.
- Developed advanced SQL queries and stored procedures on Azure SQL DB to enhance data transformation logic and support real-time reporting use cases.
- Created dynamic Power BI dashboards visualizing key healthcare KPIs such as patient wait times, claim processing cycles, service utilization, and preventive care trends.
- Leveraged DAX functions to create calculated columns, dynamic measures, and time intelligence metrics (e.g., YTD, MTD) for interactive, executive-level reporting.
- Implemented row-level security (RLS) in Power BI to ensure role-based access to sensitive healthcare data, complying with HIPAA and internal data privacy policies.
- Performed data cleaning and transformation using Python (Pandas, NumPy) to handle missing values, normalize records, and enhance clinical data consistency before loading into Power BI.
- Integrated Python scripts into Power BI visuals to run statistical analyses and apply machine learning outputs directly into dashboards (e.g., patient risk scores, anomaly detection flags).
- Used Tableau and Power BI together for cross-functional reporting needs—Power BI for financial and claims analysis, Tableau for visual storytelling of patient journeys.
- Automated dashboard refreshes and notifications by scheduling dataset updates from Azure SQL and setting up Power BI service alerts, ensuring real-time visibility across departments.

Environment: Azure SQL Database, SQL Server, Power BI Desktop, Power BI Service, DAX, Tableau, Python (Pandas, NumPy, Matplotlib), SQL, Anaconda, Git, Jupyter Notebooks, Docker, Beautiful Soup, wxPython, Twisted

TECHNICAL SKILLS:

- **Cloud Platforms:** AWS (S3, Redshift, EC2, Glue, Lambda, Athena, IAM), Azure (SQL Database, Data Lake), Google BigQuery
- **Data Warehousing:** Redshift, Snowflake, Azure SQL DB, BigQuery, SQL Server
- **ETL & Data Integration:** Informatica, Alteryx, Python (custom ETL), SQL, AWS Glue
- **Programming & Scripting:** Python (Pandas, NumPy, Scikit-learn, Matplotlib, Seaborn, SciPy), R, SQL, VBA, Shell
- **BI & Visualization:** Power BI (Desktop, Service, DAX, RLS), Tableau, Tableau Server, Amazon QuickSight, Looker
- **Machine Learning:** Scikit-learn, SciPy, NLTK, Python (ML models), Anaconda, Exploratory Data Analysis (EDA)
- **Data Governance & Security:** RLS (Power BI), IAM (AWS), Data Validation, Compliance (AML, BSA, HIPAA), Audit Logs
- **Data Processing:** Apache Spark, Hadoop, Kafka, Amazon Athena, Google Cloud Functions

- **Reporting & Automation:** Power BI Service, Tableau automation, Python scripting, Excel (Advanced, Macros, Pivot Tables)
- **Version Control & Notebooks:** Git, Jupyter Notebooks
- **DevOps & Deployment:** Docker, AWS EC2, Lambda, Tableau/Power BI deployment pipelines
- **Statistical Techniques:** A/B Testing, Time Series, Predictive Modeling, Risk Scoring, Segmentation

Education:

Texas A & M University – Kingsville, TX Master of Science - Computer Science	May 2023 – Dec 2024
Gandhi Institute of Technology and Management Bachelor of Technology – Computer Science Engineering	June 2018 - June 2022
