SUMMARY:

Computer Science graduate with experience in full-stack, cloud platforms, and data systems. Cloud & Data Security Engineer with AWS, Python, and threat detection expertise for secure, data-driven applications.

TECHNICAL SKILLS:

Programming & Frameworks: Java, JavaScript, Python, C++, Node.js, Django, Flask, Express.js.

Frontend & UI Technologies: HTML, CSS, React.js, Angular, SAPUI5, Bootstrap, Material-UI.

Data Science & Machine Learning: TensorFlow, Scikit-learn, Pandas, NumPy, Matplotlib, Power BI.

Databases, Cloud & DevOps: MongoDB, PostgreSQL, MySQL, AWS, Azure, Docker, Kubernetes, Git.

Security & Monitoring Tools: Wireshark, Nessus, Metasploit.

WORK EXPERIENCE:

Full Stack Developer (Intern) Four Origin, India

| January 2023 – May 2023

- Designed and implemented scalable full-stack web applications using SAP UI5 and ODATA, achieving a 16% improvement in platform scalability and a 15% boost in data retrieval speed.
- Developed dynamic web interfaces and integrated backend systems, enhancing user experience and system performance.
- Configured analytics, logging, and security protocols using AWS tools to support data-driven improvement.

PROJECT EXPERIENCE:

File Sharing Website with Auto-Deletion (Tools: AWS S3, RDS, EC2, Lambda, SNS)

| April 2024

- Developed a secure, cloud-based file-sharing system supporting 100 concurrent users, processing 1 GB of data per minute with end-to-end encryption and automated lifecycle management via AWS Lambda.
- Implemented auto-deletion using AWS Lambda and SNS, ensuring compliance with data retention policies and reducing storage costs by 20%.
- Integrated role-based access control and file encryption to secure sensitive business data.
- Designed a cloud-native architecture using S3, RDS, and EC2, achieving 99.9% uptime for efficient file management.

Social Media App Development (Tools: Python, Flask, HTML, CSS, JavaScript, MySQL)

| April 2024

- Built a full-stack social media application supporting 50+ daily active users with features like user authentication, profile management, and post interactions.
- Implemented CRUD operations and a Toggle-Follow system, reducing server load by 15% through optimized database queries.
- Achieved dynamic content rendering with Flask templates, improving page load times by 25%.
- Designed a modular backend architecture for seamless API integration and scalability.

Phishing Attacks Analysis and Website Classification Using Ensemble Learning

(Tools: Python, Anaconda, Jupyter Notebook, TensorFlow)

| April 2023

- Created a phishing website classifier using ensemble learning, achieving 93.82% accuracy on a dataset of 10,000+ websites.
- Developed a scalable detection pipeline, reducing false positives by 10% for real-world cybersecurity applications.
- Utilized Python, TensorFlow, and Jupyter Notebook to implement and evaluate the classifier, enhancing threat intelligence.

EDUCATION:

University of Alabama at Birmingham (Master of Science in Computer Science) | **January 2024 - May 2025**

GPA: 3.40 / 4.00

SRM University, India (Bachelor of Technology in Computer Science Engineering) | **June 2019 - May 2023**

GPA: 8.22 / 10.00
