PROFILE

Experienced Full Stack Developer with over 3+ years of professional experience in Java, Spring Boot, and MERN technologies. Proven expertise in optimizing backend services, enhancing UI/UX designs, and streamlining deployment processes. Skilled in CI/CD implementation, AWS deployment, and RESTful API development, driving efficiency and success across projects.

EDUCATION

Master of Science in Computer Science, University of Dayton

2022-2024

SKILLS

Languages: Java, Python, JavaScript, C++

Databases: MySQL, SQL, PostgreSQL, MongoDB, Redis

Front/Backend Technologies: Spring Boot, REST API, Spring data, HTML, CSS, React, Angular, Node.js

Core Skill Sets: Data Structures and Algorithms, System Design, Design Patterns, Clean Architecture, Object Oriented Design, SOLID Principles

Other Tools & Technology: CI/CD, Jenkins (CI/CD), Git, AWS (EC2, Lambda), Azure, Docker, Maven, Grafana

Postman, Swagger, API development, Gradle, Agile Methodology, Scrum, SDLC, JIRA, Apache Tomcat, Kubernetes, Mockito, Junit, PowerShell, Bitbucket, Kafka, Jasmine, Linux, Selenium

EXPERIENCE

Full Stack Developer

09/2023 – Present

HubSpot

Remote, USA

- Developed and maintained backend services and APIs using Java and Spring Boot, integrating the spring data to optimize data management and achieved 30% enhancement in query performance through efficient data handling
- Designed interactive, responsive user interfaces based on UI/UX designs using React.js, JavaScript, CSS, and Bootstrap within the MERN stack, enhancing both user experience and interface functionality; resulted in a 30% rise in user retention
- Optimized database performance and implemented efficient data caching techniques, resulting in a notable 40% improvement in system responsiveness and API response times, ensuring seamless data retrieval and processing
- Containerized applications with Docker and deployed services on AWS, streamlining deployment processes and maintaining consistent environments across development, testing, and production stages
- Implemented CI/CD pipelines using Jenkins, automating testing and deployment processes, which improved operational efficiency by approximately 50% and enabled quicker organizational responses

Full Stack Developer

02/2021 – 07/2022

IBM

Chennai, India

- Developed server-side applications using Java, following SOLID principles, and ensuring high performance and reliability
- Validated Spring Data integration to optimize backend data management and manipulation, ensuring high performance and reliability, resulting in a 20% efficiency improvement
- Engineered a dynamic interface using React.js, resulting in a 30% boost in user retention and a 20% increase in session duration, ultimately enhancing user interaction and satisfaction across multiple devices
- Achieved an 18% efficiency enhancement by seamlessly integrating frontend and backend components for cohesive web applications, promoting smooth data flow and user interactions
- Designed RESTful APIs to facilitate efficient communication between frontend and backend systems, fostering seamless data exchange and synchronization with a 25% success rate

Full Stack Developer

03/2020 – 01/2021

Genpact

Remote, India

- Improved a real-time chat application using Java, Spring WebSocket, and React, enforcing secure user authentication and authorization using AWS Cognito, ensuring seamless login and registration processes with a 99% success rate
- Integrated message history with NoSQL database, enabling users to access previous conversations and thereby boosting user retention by 20%
- Deployed a scalable application on AWS Elastic Beanstalk, optimizing auto-scaling and load-balancing features; configured ELB to manage traffic across EC2 instances, enhancing availability by 35% and reducing downtime-related costs by 20%

- Created a comprehensive testing suite using JUnit and Selenium, covering unit, integration, and end-to-end scenarios, and automated the testing pipeline to ensure uniform code quality, reducing manual testing efforts by 60% and bug incidence by 40%
- Teamed up with the UI/UX team to design a responsive and intuitive user interface using React components, integrating backend services via RESTful APIs and WebSocket protocols for real-time updates, resulting in a 25% improvement in user satisfaction

PROJECTS

Online food delivery App

- Spearheaded the development and fine-tuning of the QEats backend by actively contributing to 4 pivotal modules leveraging Spring Boot. Crafted REST API endpoints to facilitate seamless restaurant inquiries and order placements. Implemented performance enhancements and an innovative search capability, resulting in a notable decrease in response time, thereby bolstering app responsiveness during peak usage.
- Demonstrated proactive problem-solving prowess by swiftly identifying and resolving production issues through the application of 4 systematic debugging methodologies. These efforts significantly bolstered the reliability and user satisfaction of the QEats app.
- Technologies: HTTP, REST, Mockito, Spring-Boot, MongoDB, Spring Data, Interfaces, Redis, JMeter, Java, Jackson, Lombok

Online Contest using Object Modeling

- Built a Hackerrank like contest application by applying their Core Java design skills
- Designed implemented the classes required for a contest framework and implemented the business logic of running a simulated contest.
- Technologies: Clean Architecture, Object Oriented Design, Java, Unit testing, Design Patterns, SOLID Principles, Interfaces, Exception Handling, Interfaces, J Unit, Mockito

Stock Portfolio Analyzer

- Contributed to the development of the portfolio manager's core logic, which served as the application's framework and was distributed as a reusable library. This helped to assure scalability. Completely refactored the code to allow for smooth interface to multiple stock quote systems, increasing the flexibility of the program.
- Optimized Stability and Performance: The application's stability and performance were substantially improved, resulting in a strong platform that can process large amounts of data while yet being incredibly responsive
- Technologies: Gradle, Code, Unit Testing, HTTP, Java, REST, Jackson, Multithreading, Exception Handling, Design Patterns

ACHIEVEMENTS

- **Indy Autonomous Challenge** Qualified for second round
- **World Robot Summit (WRS) 2020, Japan** Won 1.25 Million Yen (10,000 USD)
- **RoboCup German Open (Rescue League), Germany** Secured 7th position

LEADERSHIP

- **Chairperson, IEEE**
Led IEEE student branch in various IEEE events, competitions, and meetings. Helped more than 100 students in various events
- **Executive Committee member of IEEE student branch**
Coordinator for the IEEE fests, membership drives, and workshops conducted at our university
