

NAVEEN GUPI

Power BI | Tableau Developer | Power BI Developer | Azure MS SQL BI Developer

naveen.gupi25@gmail.com | 561-465-6601 | EAD | Ready to Relocate anywhere in US

PROFESSIONAL WORK SUMMARY

- Skilled Power BI Developer / Azure MS SQL BI Developer with a proven record of delivering data-driven analytics solutions across Healthcare and Retail sectors, leveraging deep expertise in Power BI, Azure, SQL, and Microsoft Fabric.
- Over 4 years of experience in architecting, developing, and deploying end-to-end BI solutions that transform raw enterprise data into actionable insights supporting business growth and performance improvement.
- Adept in building interactive Power BI dashboards and paginated reports for executive, operational, and compliance reporting needs.
- Strong command of Azure BI ecosystem, including Azure SQL Database, Synapse Analytics, Data Factory (ADF), and Microsoft Fabric Lakehouse, for seamless data integration, modeling, and analytics scalability.
- Designed data models (star and snowflake) and developed T-SQL stored procedures, views, and optimized queries to support reporting performance and consistency across business domains.
- Built ETL pipelines in Azure Data Factory for automated data ingestion, cleansing, and transformation from multiple enterprise systems and cloud sources.
- Created Power BI Paginated Reports (Report Builder) for operational, financial, and compliance use cases, incorporating dynamic parameters, drill-through, and export-ready designs.
- Applied DAX, Power Query (M), and Python (Pandas, NumPy, Matplotlib) for advanced analytics, trend forecasting, and KPI standardization.
- Implemented Role-Based Security (RLS) and governance frameworks to maintain secure, compliant, and auditable reporting environments in Power BI Service.
- Automated report refresh cycles and alerting mechanisms using Power Automate to improve reporting efficiency and reduce manual dependencies.
- Collaborated closely with cross-functional business stakeholders, architects, and data engineers to ensure alignment between data models, KPIs, and enterprise reporting strategy.
- Recognized for combining technical depth, business intelligence strategy, and visual storytelling, delivering BI solutions that improve visibility, decision-making, and performance across global teams.

WORK EXPERIENCE

Power BI Developer / Azure MS SQL BI Developer

BayCare Health System – Tampa, FL | May 2025 – Present

As a Power BI and Azure BI Developer, I lead the development of automated data pipelines, optimized data models, and visually compelling dashboards leveraging Azure SQL, Data Factory, and Power BI Service. My work emphasizes data reliability, performance optimization, and governance, ensuring accurate and compliant healthcare reporting.

Responsibilities:

- Designed and deployed Power BI dashboards visualizing patient flow, clinical throughput, financial performance, and staffing utilization metrics.
- Built data models and stored procedures in Azure SQL Database and SQL Server for efficient reporting and analytical workloads.

- Developed ETL pipelines using Azure Data Factory (ADF) to automate ingestion and transformation of data from EHR, claims, and HR systems.
- Created Power BI Paginated Reports (Report Builder) for regulatory, compliance, and departmental operational reporting.
- Authored DAX measures and Power Query (M) transformations to standardize KPIs and enhance model flexibility across multiple datasets.
- Implemented Role-Based Security (RLS) and workspace governance in Power BI Service to manage access by facility, department, and role.
- Partnered with data architects to design Azure Synapse and Fabric-ready data structures, improving query performance and scalability.
- Used Python (Pandas, NumPy, Matplotlib) for data profiling, anomaly detection, and advanced analytics integration with Power BI datasets.
- Automated report distribution and refresh schedules via Power Automate, increasing report delivery efficiency for clinical and finance teams.
- Conducted UAT sessions and performance testing to validate data accuracy and optimize dataset refresh times.
- Collaborated with business stakeholders to define KPIs, build ad-hoc visualizations, and ensure alignment between business rules and data logic.
- Authored comprehensive technical documentation, metadata dictionaries, and dashboard user guides supporting governance and compliance.

Environment: *Power BI (Desktop, Service, Paginated Reports), Azure SQL Database, Azure Synapse Analytics, Azure Data Factory (ADF), Microsoft Fabric (Lakehouse readiness), SQL Server, Python (Pandas, NumPy, Matplotlib), DAX, Power Query (M), Power Automate, SSRS, Excel, Git, Agile (Scrum), HIPAA & PHI Compliance Frameworks*

Tableau Developer / BI Analyst

Tata Consultancy Services (TCS), Hyderabad, India | May 2021 – July 2023

As a Tableau Developer / BI Analyst, I was responsible for developing, optimizing, and deploying enterprise-grade dashboards and reports using Tableau Desktop, Tableau Server, and Azure SQL Database. My work focused on creating actionable insights for decision-makers, improving reporting efficiency, and enabling self-service analytics across departments.

Responsibilities:

- Designed and developed interactive Tableau dashboards to visualize key performance metrics, financial trends, and clinical operational data.
- Partnered with data engineers to model data structures and build efficient Azure SQL datasets and stored procedures for Tableau reporting.
- Created complex calculated fields, parameters, and LOD (Level of Detail) expressions to drive dynamic and user-friendly dashboards.
- Built ETL workflows using Azure Data Factory (ADF) to automate data ingestion, transformation, and refresh schedules for Tableau data sources.
- Developed data blending and joins to merge multiple data sources (Azure SQL, flat files, and APIs) into unified Tableau data extracts.
- Leveraged Python (Pandas, Matplotlib) for ad-hoc analysis, data validation, and anomaly detection prior to dashboard publication.
- Worked closely with stakeholders to define KPIs, visualization requirements, and report specifications, ensuring alignment with business goals.
- Implemented row-level security (RLS) in Tableau Server for user-based data access controls and compliance with governance policies.
- Published and maintained dashboards on Tableau Server, managing version control, refresh scheduling, and user permissions.

- Conducted UAT and performance tuning to improve dashboard load times and ensure data consistency across Tableau and Azure environments.
- Created Tableau Prep flows for data cleaning, transformation, and standardization prior to BI consumption.
- Designed mobile-optimized dashboards for field teams and executives using Tableau Mobile capabilities.
- Documented data lineage, calculations, and user guides, enabling self-service BI and long-term maintenance.
- Collaborated with business users to train and enable data literacy and Tableau adoption across departments.

Environment: *Tableau Desktop, Tableau Server, Tableau Prep, Azure SQL Database, Azure Data Factory (ADF), Power BI (basic integration), Python (Pandas, NumPy, Matplotlib), T-SQL, Excel, Git, Agile (Scrum), Financial & Healthcare BI Frameworks*

Power BI Developer / Data Analyst

Insight Talent Pvt. Ltd. (Client: Cigna Healthcare – USA), Hyderabad, India

September 2019 – May 2021

As a Power BI Developer / Data Analyst, I was responsible for building and maintaining data models, ETL pipelines, and dynamic Power BI dashboards, supporting real-time insights for operations, finance, and clinical divisions. My role combined deep technical skills with business understanding to drive performance improvements and reporting accuracy.

Responsibilities:

- Designed and developed interactive Power BI dashboards visualizing claims trends, provider performance, and reimbursement metrics.
- Built data models (star/snowflake) using Power BI Desktop and Azure SQL Database, ensuring efficient refresh cycles and optimized query performance.
- Developed ETL pipelines in Azure Data Factory (ADF) to integrate EHR, claims, and financial data into a centralized Azure data warehouse.
- Created DAX measures and calculated columns to support KPIs such as claims turnaround time, payment accuracy, and operational efficiency.
- Collaborated with business users to gather requirements and translate them into technical specifications for data visualization and reporting.
- Leveraged Python (Pandas, Matplotlib) for data quality checks, anomaly detection, and predictive trend modeling.
- Implemented Role-Based Security (RLS) in Power BI Service to restrict sensitive healthcare and financial data by department and region.
- Conducted data validation and UAT with cross-functional stakeholders, ensuring accuracy and alignment with business definitions.
- Migrated several legacy SSRS and Excel-based reports into Power BI Paginated Reports for detailed audit and compliance reporting.
- Integrated Power BI Service with Power Automate for automated report distribution and workflow notifications.
- Performed query tuning and DAX optimization, reducing dataset refresh times and improving overall dashboard responsiveness.
- Supported self-service BI enablement, training business users on Power BI features and governance best practices.
- Authored data dictionaries, report catalogs, and metadata documentation as part of enterprise BI governance.
- Collaborated with Cigna's U.S. data architecture team on Azure Synapse migration planning for large-scale data processing workloads.

Environment: *Power BI (Desktop, Service, Gateway, Paginated Reports), Azure Data Factory (ADF), Azure SQL Database, Azure Synapse Analytics, Python (Pandas, NumPy, Matplotlib), SSRS, Power Query (M), DAX, Power Automate, Excel, Git, Agile (Scrum), Healthcare Data Compliance (HIPAA, PHI)*

EDUCATION

- Bachelors in Electronics and Communication Engineering | *Chennai Institute of Technology*
- Masters in Computer Science | *Florida Atlantic University*
