PROFESSIONAL SUMMARY

Detail-oriented and highly motivated software developer with around 3 years of hands-on experience designing and building scalable microservices and cloud-native applications using Java, Spring Boot, AWS, and SQL. Proven ability to develop RESTful APIs, automate infrastructure workflows, and integrate cross-platform services in Agile environments. Strong background in backend development with exposure to frontend technologies and CI/CD tools. Eager to contribute technical expertise, problem-solving skills, and a growth mindset to innovative software engineering teams.

TECHNICAL SKILLS

Programming Languages	Java 8, 11, 17, Java Streams, Python.
Architecture	Microservices, RESTful web services, REST API's.
Web Development	HTML, CSS, JavaScript, Bootstrap, React, NodeJS.
Spring Ecosystem	Spring MVC, Spring Boot, Spring Data JPA, Spring AOP, Hibernate.
API Tools	Postman, Swagger UI.
Cloud Services	AWS, Azure, AKS, EKS, DynamoDB.
Databases	MySQL, RDBMS, MongoDB, Oracle.
Build Tools	Maven, Gradle.
Web/Application Servers	Tomcat, JBoss, WebSphere.
Version Control & CI/CD	Git, GitHub, Jira, Jenkins, Argo, Docker.
Unit Testing	JUnit, TestNG.
Logging Tools for Java	Log4j, SLF4J.
Security & Authentication	OAuth 2.0, JWT (JSON Web Tokens), Spring Security.
Operating Systems	Windows, Linux.
IDEs	IntelliJ IDEA, Eclipse, Visual Studio Code.

PROFESSIONAL EXPERIENCE

Java Full Stack Developer | BNSF Railway, Texas

Jan 2024 - present

- Contribute to designing and developing an automated solution for **provisioning/de-provisioning/destroying** resources in the cloud AWS and Azure using **workflow automation**.
- Collaborate with cross-functional teams in an **Agile environment**, delivering four microservices using Jenkins with continuous integration and deployment (CI/CD) strategies.
- Participated in **full application lifecycle**, following Agile principles, from requirement gathering and design to development, deployment, and support.
- Design and implement **RESTful APIs** for inter-service communication, enhancing workflow triggering, tracking, and scalability across AKS/EKS-deployed microservices.
- Integrate **ServiceNow and GitHub Webhooks** to automate environment-specific deployments, ensuring controlled approvals for dev, non-prod, and prod environments.
- Design and implement a metadata service that reduces service-to-service data passing by storing critical workflow data in **DynamoDB**.
- Automate **Terraform workflows** in **Argo CI/CD**, implementing custom workflows for plan, release, apply, and destroy steps, reducing manual intervention by 70% in cloud resource management.
- Automate custom workflows to carry out **organization-specific configurations** like domain entry and certification creation on top of the resources created.
- Investigated and resolved technical issues across development and staging environments, **collaborating with team leads** to enhance system reliability.

Software Developer | Kivyo Inc, Texas

Oct 2023 - Jan 2024

- Used **Hibernate** and **Spring Boot** as back-end technologies to create functionalities in a microservice Architecture and participated in project planning and code reviews.
- Designed, developed, tested, and deployed microservices with Spring Boot and REST APIs as part of the **end-to-end product lifecycle**.
- Developed and maintained **frontend components using ReactJS**, enhancing user experience and ensuring seamless integration with backend services.
- Optimized the product page by maintaining **RESTful** services using **Spring Boot**, resulting in a 10% improvement in API response times for enhanced customer Experience.
- Utilized **Java 8** features, including **Streams API**, to streamline the processing of extensive datasets during product catalog updates, leading to a notable reduction in response times.
- Improved product page performance and scalability by implementing **AWS Lambda** functions and optimizing content storage using **S3** buckets, resulting in a significant 30% performance boost.
- Integrated **Git** for version control and seamlessly automated building and deployment processes through **CI/CD** pipelines, including **Jenkins** and **Docker**. This integration resulted in a significant 25% reduction in deployment failure.

Programmer Analyst | Cognizant Technology Solutions, India

Aug 2021 -Dec 2021

- Collaborated with cross-functional teams to analyze requirements, creating clear and accessible technical documentation and project reports.
- Enhanced integration and unit test efficiency by 40% through **Test-Driven Development (TDD)** using **Selenium** and **JUnit**, automating key website functions like product search, checkout, and user accounts.
- Developed generic code in **Python** for ticket automation and wrote **SQL** queries to perform automated data entries and table manipulations, achieving a 40% increase in process efficiency.
- Engineered a service that uses **Apache POI** to create tables dynamically by taking input as Excel files, analyzing them, and sending them as objects to the front end in **JSON** format.
- Engaged in Agile methodology, actively participated in the process, and wrote user stories related to applications in **JIRA**.

Programmer Analyst Trainee | Cognizant Technology Solutions, India

Feb 2021 - Aug 2021

- Worked on technical skill development by being a part of a **CSD** program, which included hands-on exercises and project work.
- Gained expertise in **Microservices** architecture and **Cloud** technologies by studying cloud-native applications.
- Collaborated in **Agile** development teams, attending sprint planning and sprint retrospective sessions to acquire Agile methodology.
- Developed generic code in **Java** for web applications and wrote **SQL** queries to perform automated data entries and table manipulations to increase process efficiency and accuracy.

PROJECTS

Personal Finance Tracker

- Built an interactive GUI with **Spring Boot** backend and **HTML/CSS** frontend for user-friendly financial tracking.
- Implemented **JWT authentication & Spring Security**, ensuring secure user login and session management.
- Optimized **SQL queries & indexing**, improving CRUD performance by 10% and reducing data retrieval time by 30%.
- Designed **RESTful APIs & data visualization (Chart.js)** for interactive financial insights, reducing financial mismanagement by 40%.
- Designed a **report generation feature**, exporting insights in **PDF/CSV format**.

Dance Step Recognition

- Developed an **ML model (CNN-based)** to classify Bharatanatyam dance steps, improving recognition accuracy by 15%.
- Implemented **image processing techniques** for step validation, increasing step classification precision.
- Used **deep learning patterns** to differentiate valid and invalid dance steps.
- Designed an interactive **GUI** to allow users to upload and analyze dance postures from multiple angles.

EDUCATION

University of Texas at Arlington, Texas, USA

Dec 2021 – May 2023

Master of Science in Computer Science

Amrita Vishwa Vidyapeetham, Coimbatore, India

July 2017 – May 2021

Bachelor of Technology in Computer Science and Engineering
