Software Engineer (Full Stack Java Developer)

Solutions-focused Full Stack Java Developer with a track record of driving efficiency and revenue growth via application modernization. Proficient in various programming languages, platforms, and tools, with notable expertise in Java, JavaScript, Typescript, Spring Boot and Angular. Proven ability in integrating various systems through RESTful APIs & microservices, enhancing real-time data accuracy.

Technical Proficiencies

Platforms:	Spring Boot, Angular
Languages:	Java, JavaScript, TypeScript, HTML, CSS, XML, JSON, SQL.
Tools:	Git, Maven, JUnit/TestNG, Insomnia, Postman, Swagger, Docker, Kubernetes
Others:	Agile Scrum, SDLC, Knowledge of CI/CD pipeline,

Career Experience

General Motors IT Innovation Center., Roswell, GA Software Engineer (Full Stack Java Developer)

Jan 2022 – Mar 2023

Collaborated with a team of developers on the upgrade of a traditional inventory management application. Enhanced user experience of existing applications via automation. Introduced RESTful APIs and microservices for seamless integration of diverse inventory management systems. Instituted user authentication/authorization protocols to safeguard sensitive company data.

- Boosted operational efficiency by 40% and annual revenue by \$11.5 M through the modernization of a legacy inventory management application. Achieved a 20% reduction in user response time and enhanced productivity via the automation of existing applications.
- Enhanced real-time data accuracy by integrating various inventory management systems by implementing RESTful APIs and microservices using a Spring Boot framework in the backend. The Spring Boot framework was used to create a Maven project, with a pom.xml file that contained the necessary dependencies and instructions on how the project should be built, along with compiling the code within the project and packaging it.
- Developed responsive and user-friendly web interfaces using an Angular framework in the frontend with TypeScript, HTML, and CSS. Designed and maintained the database schema using PostgreSQL and managed it with PgAdmin. Connected inventory management database to the backend and used Cross-Origin Resources Sharing Configuration to allow requests from the frontend server.
- Used IntelliJ as an IDE with Git as version control to push approved branches into the main repository within Azure DevOps for development .
- Worked in an Agile development environment, participated in daily stand-up meetings, and contributed to sprint planning.

Environments

IntelliJ IDEA, Visual Studio Code, Windows, Azure DevOps, PostgreSQL, Oracle

Education

Master of Science (M.S) in Information Technology
Mercer University, Atlanta, GA

Licenses & Certifications

Scrum Master Accredited Certification
Applied Data Science
