PROFESSIONAL SUMMARY

- Over 4+ years of experience in functional specifications, analysis, design, modeling, and development of various web applications in banking, automotive and finance domains.
- Proficient in Microsoft .NET technologies including **ASP.NET, C#, VB.NET, ADO.NET, EntityFramework, Web Services, MVC, AJAX, Windows Services, WCF Services, OOPS, XML, XSLT, HTML, SOAP, LINQ, MS IS, DHTML, VBScript, JavaScript, SQL Server**.
- Skilled in designing web pages using **HTML, JavaScript, CSS, jQuery, AngularJS, AJAX, Bootstrap, JSON, Node.js**, with strong expertise in Web Forms and Win Forms applications using .NET Framework and Visual Studio.
- Strong background in Microsoft technologies including WinForms, WebForms, Web Services, **ASP.NET, VB.NET, C#, MVC, Entity Framework, AngularJS, ADO.NET, AJAX, LINQ, WCF, WPF, Silverlight (2.0/3.0)**.
- Experience in **ASP.NET MVC** creating **Views, Partial Views, Sections, Controllers, Controller Actions, Filters, Routing**, and implementing AJAX calls using AngularJS to fetch JSON data.
- Strong expertise in **SQL Server, MS SQL, SSRS, SSIS, T-SQL, ETL (SSIS, DTS Packages)**, with experience in database development, data modeling, stored procedures, functions, schemas, and triggers.
- Hands-on experience with relational databases including **MS SQL Server, Oracle (8i, 9i, 10g, 11g, 12c), and DB2 (V8.1.2)** with knowledge of directory services like **LDAP**.
- Developed WPF applications using XAML and implemented UI components for enterprise applications.
- Expertise in application deployment on Windows and UNIX/Solaris platforms.
- Worked with **Agile (SCRUM) and Waterfall methodologies**, including Test-Driven Development (TDD).
- Experienced in **Subversion (SVN), Team Foundation Server (TFS), GIT** for version control and defect tracking tools like **JIRA, Visual Studio Team Services**.

TECHNICAL SKILLS

Languages	C#, C++, Python, Java, C, VB.Net, XML, PL/SQL
Cloud Technologies	Azure, AWS
Microsoft Technologies:	.NET Framework (4.5, 4.0, 3.5, 2.0, 1.1, 1.0), ADO .Net, ASP .Net (4.0, 3.5, 2.0, 1.1), MVC (5/4/3), AJAX, Web Services.
Frameworks:	MVC Architecture, Angular, TypeScript, React.js, Redux, Express, Node.js.
Web Technologies:	HTML, HTML5, XHTML, XML, XAML, XSL, XSLT, JSON, CSS, AngularJS, AJAX, Web Services, Bootstrap.
Databases:	Oracle, MySQL, MSSQL Server, Sybase, PostgreSQL, MongoDB.
IDEs:	Microsoft Visual Studio, SQL Server Management Studio.
Version Control:	TFS, Git, SVN, Visual Source Safe.
Protocols:	TCP/IP, HTTP, FTP, SOAP.
Reporting Tools:	SQL Server Reporting Services, Crystal Reports.
Other Tools:	MS Visio, N-Unit, UML 2.0, MS Office, Coded UI.
Database Tools:	SQL Developer, DBArtisan, TOAD, MS SQL Server Management Studio.

EDUCATION

Texas Tech University
Master's in Computer Science

Lubbock, Texas
Aug 2022 – May 2024

WORK EXPERIENCE

Voya Financials
.Net Full Stack Developer

Jun 2024 – Present
New York, NY

- Collaborated with underwriting, finance, and compliance teams in an **Agile Scrum** environment to deliver insurance solutions aligned with business objectives and regulatory requirements.
- Designed and implemented ASP.NET MVC and .NET Core Web APIs for policy underwriting, agent commission tracking, and premium payment processing.
- Developed microservices-based architecture using MassTransit and **RabbitMQ**, enabling asynchronous event-driven processing for policy status updates.
- Implemented Windows Communication Foundation (WCF) services for secure data exchange between internal

insurance systems and external financial institutions.

- Integrated **Angular** and TypeScript to develop a responsive, real-time agent dashboard, providing live commission tracking and customer insights.
- Designed and optimized **SQL Server** and **Azure Cosmos DB** schemas for policy data storage, reducing query execution time by 30% through indexing and partitioning strategies.
- Implemented OAuth 2.0, SAML, and Azure AD B2C authentication for customer identity and access management, ensuring compliance with insurance security regulations.
- Developed background job processing with Hangfire, automating policy renewal notifications and premium due alerts for policyholders.
- Optimized policy claim processing using **Entity Framework Core**, improving transaction speed and data consistency.
- Developed serverless functions on **Azure Functions** for on-demand policy verification and document validation, reducing processing overhead.
- Implemented Kusto Query Language (KQL) and Azure Monitor for real-time application performance tracking and logging.
- Automated unit and integration testing using xUnit, Moq, and SpecFlow, achieving 92% test coverage across microservices and API layers.

International

Jan 2023 – May 2024

.Net Full Stack Developer

Lisle, IL

- Designed and implemented **scalable data models**, migrating **vehicle history data** from file storage to **Azure CosmosDB and MongoDB** for improved performance and efficiency.
- Developed **high-performance RESTful APIs** using **.NET Core** to support **truck software upgrades** and enhance system functionality.
- Built **dynamic and responsive user interfaces** using **Angular**, improving user experience and engagement.
- Deployed **.NET Core applications** on **Azure App Service and WebApps**, leveraging **Terraform** for Infrastructure as Code (**IaC**) to ensure scalable and automated deployments.
- Engaged in **data model design discussions**, implementing **efficient storage strategies** that optimized data retrieval and processing.
- Developed and maintained the **International Seller Analytics Platform (ISAP)**, a **data-driven insights dashboard** enabling sellers to track **sales trends, inventory performance, and customer engagement**.
- Implemented **optimized API architectures** and **enhanced data workflows**, improving the platform's responsiveness and overall efficiency.
- Built and optimized **RESTful and gRPC APIs** using **.NET 7, C#, and Dapper**, reducing API response latency by 35% for high-volume transaction processing.
- Developed **real-time auction tracking** using **SignalR and WebSocket's**, enabling live updates for bidding activity and dynamic price adjustments.
- Integrated **GraphQL APIs** to optimize query efficiency for the analytics dashboard, minimizing redundant data fetching and improving frontend performance.
- Developed an interactive, mobile-responsive UI using **Vue.js, Tailwind CSS, and TypeScript**, providing sellers with a seamless and intuitive experience.
- Implemented **CQRS (Command Query Responsibility Segregation)** and event sourcing patterns using **MediatR**, enhancing system scalability and auditing capabilities.
- Designed and optimized relational and distributed database schemas using **PostgreSQL and Azure Cosmos DB**, improving query execution and storage efficiency.
- Integrated **OAuth 2.0 and Okta SSO** for secure authentication, enabling seamless seller account management and multi-factor authentication (MFA).
- Developed **serverless Azure Functions** to automate data ingestion and event-driven workflows, reducing infrastructure costs and improving efficiency.
- Implemented **CI/CD pipelines with GitHub Actions and Helm**, ensuring automated deployments and efficient rollback mechanisms.
- Conducted full-stack test automation using **NUnit, FluentAssertions, and Cypress**, ensuring 95% test coverage across API and UI layers.
- Collaborated with **data analysts, security engineers, and DevOps teams** in an Agile Scrum environment, delivering scalable e-commerce solutions that improved seller engagement by 40%.

Cognizant Technology Solutions

Bangalore, India

.NET Developer

Jul 2020 – Aug 2022

- Developed and maintained the **Canara Bank Digital Lending Platform (CDLP)**, enabling secure online loan

applications, approvals, and disbursements through an integrated banking ecosystem.

- Built high-performance backend services using **.NET Core, C#, and Entity Framework Core**, improving loan processing speed and customer onboarding efficiency.
- Designed and optimized relational and NoSQL data models using **Oracle Database and RavenDB**, enabling scalable transaction handling for high-volume banking operations.
- Implemented **Microservices architecture with MassTransit** to support asynchronous communication between banking modules, enhancing system resilience.
- Developed a secure **customer self-service portal** using **Knockout.js, Razor Pages, and Bootstrap**, allowing real-time access to account statements, loan details, and transaction history.
- Integrated **SOAP and REST APIs** to facilitate interoperability between banking systems, third-party credit bureaus, and regulatory agencies.
- Implemented **Role-Based Access Control (RBAC)** and secured user authentication with **LDAP and Active Directory Federation Services (ADFS)** to comply with banking security policies.
- Developed **event-driven architecture using Apache Pulsar**, ensuring efficient processing of real-time loan approvals and credit risk assessments.
- Optimized transaction performance by implementing **SQL indexing, query optimization, and partitioning strategies** in Oracle Database.
- Automated API testing and functional testing using **SpecFlow, MSTest, and RestSharp**, achieving 90% test coverage across lending workflows.
- Implemented **CI/CD pipelines using Jenkins and Octopus Deploy**, reducing deployment time and improving system reliability for online banking services.
- Collaborated with **risk management, compliance, and DevOps teams** to ensure banking applications met regulatory requirements, security best practices, and high availability standards.
