

Navya Pulikunta

Business DATA ANALYST

Jersey City, NJ | 551-349 3499 | npulikunta@gmail.com | [LinkedIn](#)

SUMMARY

Data Analyst and Software Engineer with 3+ years of experience in extracting insights from complex data and building intelligent, scalable solutions across healthcare, finance, and cloud environments. Proficient in SQL, Python (Pandas, NumPy, scikit-learn, XGBoost), and R, with hands-on experience in data wrangling, statistical modeling, A/B testing, and time series forecasting. Skilled in developing and evaluating ML models for classification, regression, and clustering tasks, along with deploying them in production environments. Experienced with big data tools like Spark and MongoDB, and building automated ETL/data pipelines using Airflow, dbt, and Snowflake. Proficient in creating interactive dashboards with Power BI, Tableau, and Looker Studio. Comfortable working across AWS, Azure, and GCP platforms, and applying MLOps and software engineering practices (Git, CI/CD, Agile) to streamline workflows and drive business impact.

SKILLS

Data Analysis	Data wrangling, data cleaning, EDA, statistical analysis, hypothesis testing, regression, clustering, A/B testing, time series forecasting
Visualization	Power BI, Tableau, Looker Studio, Excel dashboards, Google Data Studio, matplotlib, seaborn, Plotly
Programming	Python (pandas, NumPy, scikit-learn, matplotlib, seaborn, XGBoost), R, Excel VBA
Machine Learning	Supervised & unsupervised learning, feature engineering, model training & evaluation, basic deployment, ML pipelines with scikit-learn, XGBoost
Databases	SQL (PostgreSQL, MySQL, SQL Server), MongoDB, Snowflake, optimized querying (joins, CTEs, window functions)
ETL & Pipelines	Apache Airflow, Alteryx, Talend, dbt, SSIS, automated workflows, batch processing
Big Data Tools	Spark (PySpark), Hive, Hadoop (basic), AWS Redshift
Cloud Platforms	AWS: S3, Redshift, Athena, RDS, Glue, QuickSight, Lambda (basic) Azure: Data Factory, Synapse, Azure SQL, Blob Storage, Power BI GCP: BigQuery, Data Studio, Cloud Storage, Looker Studio, Dataflow (basic)
Excel Tools	Pivot tables, Power Query, advanced formulas, VLOOKUP/XLOOKUP, macros
Tools & Productivity	Power BI, Tableau, Excel, Google Data Studio, Looker Studio,
Software Engineering	Git, GitHub, Bitbucket, Agile/Scrum, Jira, Confluence
Business Acumen	KPI tracking, ROI analysis, business case modeling, forecasting
Soft Skills & Collaboration	Microsoft Teams, Slack, Zoom, Google Workspace, Data storytelling, stakeholder communication, critical thinking, effective presentation

EDUCATION

Master of Science in Computer Science | **Stevens Institute of Technology, NJ** | Aug 2022 – May 2024

Bachelor of Technology in Computer Science | **KL University, India** | Jul 2018 – May 2022

CERTIFICATION

AWS Certified Cloud practitioner | Fundamentals of Digital Marketing – Google

Professional Experience

Business Data Analyst | GE Healthcare, NJ | Feb 2025 – Current

- Supported the extraction, cleaning, and transformation of large-scale patient data from PostgreSQL, MySQL, Oracle, and SQL Server using advanced SQL (joins, CTEs, window functions) for clinical reporting, operational insights, and compliance analysis.
- Assisted in building automated ETL pipelines using PySpark and Python to enable scalable data processing; contributed to exploratory data analysis (EDA), feature engineering, and development of predictive models (logistic regression, random forest, decision trees, XGBoost) using Python (Pandas, NumPy, scikit-learn) and R for tasks such as readmission prediction and length of stay (LOS) forecasting.
- Develop and maintain interactive dashboards and self-service reports using Power BI, Tableau, and Looker Studio to visualize KPIs such as treatment adherence, mortality rates, and cost-of-care metrics.
- Participated in time series forecasting, survival analysis, and A/B testing to evaluate care strategies and improve patient engagement; integrated behavioral data from Google Analytics and patient portals.
- Observed and supported cloud-based analytics and orchestration workflows using AWS services (S3, Redshift, Lambda, RDS, CloudWatch, and Athena) and GCP tools (BigQuery, Cloud Functions, Looker Studio, Data Studio).
- Prepared stakeholder-ready reports and presentations using Excel (Power Pivot, advanced formulas), PowerPoint, and Visio; collaborated with clinicians, data analysts, and engineers to support data-driven decision-making in healthcare settings.

Data Analyst | Intuit, USA | Aug 2024 – Jan 2025

- Assisted in extracting and transforming structured datasets from MongoDB, SQL Server, and Snowflake to support financial reporting and client portfolio analysis; supported the development of predictive models in Python (Seaborn, Matplotlib, scikit-learn) and R to forecast client churn and investment performance based on transaction patterns.
- Contributed to building interactive dashboards and visual reports using Power BI, Tableau, and Google Analytics, providing real-time insights into fund allocations, asset performance, and investor engagement metrics.
- Configure and run ETL pipelines in Databricks, integrating external market feeds with internal investment databases; participated in feature engineering and time series forecasting using Apache Spark to detect investment risk trends and seasonality patterns.

- Supported the design and maintenance of Snowflake data pipelines, integrating structured data from AWS S3, Azure Blob Storage, and internal systems via Snowpipe and staging tables for downstream analytics use.
- Applied statistical analysis techniques and A/B testing to evaluate the effectiveness of investment strategies and promotional campaigns; built data ingestion workflows using Azure Data Factory (ADF), transforming datasets into Azure SQL Database and Azure Data Lake Storage Gen2 for structured analysis.
- Participated in version-controlled collaboration using Git for Python and SQL scripts, contributed to pull requests, and worked alongside engineering and compliance teams to maintain transparency and reproducibility.
- Engaged in Agile ceremonies (standups, sprint reviews, retrospectives) using Jira and helped maintain technical documentation, process flows, and lineage maps in Confluence.

Data Analyst | Cognizant Technology Solutions Pvt Ltd, India | May 2021 – Jul 2022

- Worked with cross-functional datasets from core banking and CRM systems using complex SQL (CTEs, window functions) and Python for full-funnel customer behavior analysis.
- Conducted descriptive and inferential analysis on loan utilization, product bundling, and churn risk to improve client segmentation and targeted outreach; Created automated reporting pipelines for month-end financials and portfolio performance using Airflow and SQL, reducing manual workload and enhancing traceability.
- Configured IAM roles, users, and policies across EC2, S3, and RDS with least-privilege principles, supporting audit readiness via access logs and permission boundaries; Developed advanced Excel dashboards (pivot tables, slicers, VBA macros) for leadership to track NPA trends, fund utilization, and KPI variances.
- Deployed web applications on AWS EC2 with security groups, integrated S3 for asset hosting and RDS for backend, ensuring scalable, secure deployments; Implemented RBAC and object tagging in Snowflake to strengthen data security, governance, and compliance across environments.
- Collaborated with finance and compliance teams to align data models with audit protocols and Basel III frameworks, ensuring traceable, accurate data; Used forecasting methods (exponential smoothing, ARIMA) to predict default risk and asset underperformance across market cycles.
- Implemented version control via GitHub for Python and SQL scripts, enabling collaboration and rollbacks during data product releases; Participated in retrospectives, backlog grooming, and requirements capture in Confluence, enhancing documentation and user story quality.

Software Developer | Quanint TechSoft, India | Jan 2021 – Apr 2021

- Developed responsive, user-centric web interfaces using HTML5, CSS3, JavaScript, and Bootstrap, enhancing internal dashboard accessibility and improving data presentation across client-facing portals.
- Built interactive UI components such as data-driven forms, filters, and visual charts; integrated with backend systems via AJAX and RESTful APIs to enable real-time updates and dynamic reporting; executed controlled A/B tests to evaluate user behavior; performed statistical analysis that led to a 12% increase in key feature usage across online banking applications.
- Contributed to backend development with Python (Flask/Django) and MySQL, implementing robust CRUD operations and ensuring seamless end-to-end data flow and transactional consistency; Designed intuitive front-end visuals using HTML, CSS, and JavaScript for embedding executive-level financial KPIs into real-time reporting dashboards.
- Maintained sprint-level documentation, release notes, and code change logs using Confluence and markdown best practices; assisted in onboarding new developers and improving team delivery velocity.

Software Developer | Configore, India | May 2020 – Dec 2020

- Developed user-centric web interfaces using HTML5, CSS3, JavaScript, and Bootstrap, improving dashboard accessibility and data presentation for client-facing portals; Built interactive UI elements, forms, filters, and charts, for real-time reporting; integrated with backend systems via AJAX and REST APIs.
- Designed intuitive front-end visuals with HTML/CSS for executive portals showcasing key financial KPIs; helped deploy reporting tools using AWS (S3, Redshift) and Google Cloud to enhance cross-platform data access; Supported cross-browser compatibility and front-end debugging with developer tools and responsive testing frameworks to ensure consistent performance.

PROJECTS

- **Sales Forecasting Using Time Series Analysis**
Built ARIMA and Prophet Models on historical sales data, achieving over 85% forecasting accuracy. Engineered time-based features, applied seasonal decomposition for better interpretability. Delivered actionable insights via Power BI dashboards, aiding inventory planning, and budget allocation.
- **HR Analytics for Employee Retention**
Performed EDA and built logistic regression and decision tree models on HR datasets, predicting employee attrition with over 80% accuracy. Shared insights through Tableau dashboards, influencing retention strategies and HR policies across departments.
- **Cloud-Based Data Pipeline for Real-Time Analytics**
Developed an ETL pipeline using AWS (S3, Lambda, Redshift) to process and analyze streaming data. Implemented automated logging and error handling for reliability. Built Looker dashboards for real-time system monitoring and user engagement, improving incident response times.
- **Machine Learning-Based Speech Recognition for Assistive Technology**
Created a speech recognition system using Python, TensorFlow, SpeechRecognition, and NLP libraries (NLTK/SpaCy) to enable voice-based computer control for individuals with disabilities. Collected and preprocessed diverse speech data to train accurate speech-to-text models.
- **File Sharing Web Application**
Built a secure web app for uploading, organizing, and sharing files using Python, Django, Jinja2, and MySQL. Implemented robust user authentication and managed file metadata to ensure seamless file exchanges on a centralized platform.
