

Navyasri Arkatla

Python Full Stack Developer

Navya15600@gmail.com | +1 940 304 2396 | [LinkedIn](#)

SUMMARY

Results-driven Python Full Stack Developer with 4.5+ years of experience designing, developing, and deploying scalable web applications and APIs. Skilled in Fast API, Django, React, MongoDB, PostgreSQL, Py Spark, and cloud-native deployments (AWS & Azure). Proven expertise in building high-performance APIs, ETL pipelines, and automation solutions, with strong focus on scalability, accuracy, and usability. Adept at working in Agile teams, implementing CI/CD pipelines, and optimizing performance across the stack.

PROFESSIONAL EXPERIENCE

Python Full Stack Developer, Walmart, TX USA

Dec 2023 – Current

- Pioneered Fast API services to support file uploads, advanced search filters and template downloads; improved internal and merchant usability by ~40% through cleaner endpoints and UX-focused response handling.
- Built robust Excel validation scripts (Pandas / openpyxl patterns) for case-insensitive header checks and data type validations; integrated automated error reporting to reduce data ingestion errors by ~35%.
- Designed and implemented APIs to automate new store order processing (store validation, SKU-level exports), cutting manual processing time by ~50%.
- Implemented parallel/async retrieval of large datasets from MongoDB (async patterns / batch retrieval), improving data fetch throughput by ~30% for analytics and exports.
- Developed scheduled ETL pipelines for anomaly detection in daily orders using PySpark for feature extraction and Celery for orchestration; surfaced anomalies to downstream monitoring and ops.
- Automated build/test/deploy workflows using Docker and Azure DevOps pipelines (build → test → image → deploy), reducing deployment lead time by ~40% and standardizing releases.
- Improved API resilience and observability by adding structured logging, health checks and metrics (exposed for Prometheus/Grafana).

Python Full Stack Developer, Shopify, India

Dec 2019 – Jun 2022

- Built backend services (Django / Flask / Fast API) powering merchant workflows: product/catalog management, order validation, and export pipelines used by internal operations.
- Automated reporting and export flows (SKU-level exports, scheduled reports) using Python scripts and APIs — reduced manual reconciliation and errors by ~45%.
- Implemented server-side validation and improved checkout reliability by integrating robust input validation and retry logic for payment gateway calls.
- Implemented caching and fast storage patterns using Redis and improved query patterns for high-traffic endpoints to significantly reduce latency during peak usage.
- Containerized microservices with Docker; enabled reproducible local and CI builds and simplified test environments.
- Deployed services with container orchestration patterns (Kubernetes-friendly manifests) to support reliable scaling for traffic spikes.
- Built internal API endpoints with clear contracts and unit + integration tests (PyTest); integrated endpoints into frontend teams' workflows (React).

SKILLS

Languages & Scripting: Python, JavaScript (ES6+), TypeScript, SQL, Shell, HTML5, CSS3
Database: MongoDB, PostgreSQL, MySQL, Redis, SQLite
Frameworks (Backend): FastAPI, Django, Flask, Node.js, Express.js
Testing & Automation: PyTest, Selenium, Postman, UnitTest
Frontend Development: React.js, Angular, Vue.js, Redux, Tailwind CSS, Bootstrap
ETL & Data Processing: PySpark, Celery, Pandas, NumPy
Collaboration Tools: Git, GitHub, GitLab, Jira, Confluence, Slack
DevOps & CI/CD: Docker, Kubernetes, Jenkins, Azure DevOps, GitHub Actions, Terraform
Cloud: AWS (EC2, S3, RDS, Lambda), Azure, GCP (basic)
Security: OAuth2, JWT, RBAC, API Authentication
Practices: Microservices, RESTful & GraphQL APIs, Agile/Scrum, TDD/BDD, Design Patterns
Monitoring & Logging: Prometheus, ELK Stack, Grafana, CloudWatch, Kibana

EDUCATION

University of North Texas, Denton
Computer Science

TX, USA
Aug 2022 - May 2024
