🎓 EDUCATION

Master of Science - Data Science, Analytics, and Engineering

August 2023 – May 2025

Arizona State University, Tempe, AZ, US

3.9/4.0 CGPA

Courses: Statistics for Data Analysts, Artificial Intelligence, Fundamentals of Statistical Learning and Pattern Recognition, Data Mining, Data Visualization, Data Processing at Scale, Statistical Machine Learning, Deep Learning, Numerical Optimization.

Bachelor of Engineering - Computer Science

August 2016 – May 2020

University of Pune, Pune, MH, India

8.55/10.00 CGPA

Courses: Data Analytics, Data Mining and Warehousing, Artificial Intelligence, Machine Learning, Engineering Mathematics.

🛠 TECHNICAL SKILLS

Languages:	Python, SQL, Java, R, JavaScript, C++, Bash.
Libraries:	NumPy, Pandas, Matplotlib, Seaborn, Plotly, SciKit-Learn, SciPy, TensorFlow, Keras, PyTorch, PySpark.
Frameworks:	Spring Boot, Django REST, Flask RESTful, FastAPI, Angular, Apache Spark, Apache Kafka.
Cloud Technologies:	Amazon Web Services AWS, Microsoft Azure, Google Cloud Platform GCP, Docker, Kubernetes, Terraform.
Tools, Databases, OS:	Tableau, Power BI, Oracle SQL, MySQL, PostgreSQL, MongoDB, Git, GitHub, Windows, MacOS, Linux.
Other:	Jira, Confluence, Jenkins, Notion, Jupyter, Google Colab, Microsoft Office (Excel), Postman, Streamlit.
Certification:	Amazon Web Services AWS Certified Cloud Practitioner, ASU Project Management.

🏢 PROFESSIONAL EXPERIENCE

HyperData | Data Engineering Intern

June 2024 - August 2024

- Optimized cloud infrastructure for API scalability and reliability using *AWS, Terraform, Docker, and Airbyte* for data synchronization.
- Enhanced data processing pipelines for better efficiency and throughput by leveraging *Python and PostgreSQL* to handle larger datasets.
- Developed and refined *SQL scripts* to advance data transformation tasks and improve the API's functionality for diverse use cases.
- Executed *API performance testing*, benchmarking, and created documentation with usage examples.

Cognizant Technology Solutions | Software Engineer

November 2020 - June 2023

- Pioneered the development of *real-time monitoring and analysis services* for an American healthcare company's Covid Vaccine Survey System using *Java* and *SpringBoot*. Utilized *Apache Kafka, Splunk, and Dynatrace*, achieving a 20% reduction in system response time and addressed extant issues, leading to a 15% improvement in overall user experience.
- Spearheaded the migration of an existing SOAP-based service to a *RESTful* microservices-based architecture. Documented *Rest APIs*, authored *JUnit* tests with *Mockito*, and debugged existing issues, resulting in a 30% increase in code quality and readability.
- Engineered *data processing pipelines* using *Apache Kafka* for real-time data ingestion, transformation, and loading, optimizing data flow and storage efficiency by 25%.
- Developed new *Rest APIs* to meet business requirements, contributing to a 25% enhancement in system efficiency.
- Led the training and mentorship of 2 new developers on system features, creating comprehensive training materials, and streamlining intern onboarding, achieving a 40% faster team integration.

Cognizant Technology Solutions | Software Engineering Intern

December 2019 - April 2020

- Created a Twitter-analogous web application for a social media app using *Java, Spring Boot Framework, REST API, Microservices, Angular, MongoDB, Kafka MQ*, and monitoring tools like *Grafana, Zipkin, Prometheus*.
- Deployed the application on *AWS* using *AWS Code Pipeline* and *Docker Build* as part of *CI/CD*.
- Implemented *data engineering practices* for efficient data storage and retrieval.

🎓 ACADEMIC PROJECTS

InnSight – Generative AI chatbot for Hotel Recommendations | Hacklytics 2024 at Georgia Tech

- Engineered an advanced *AI-driven* hotel search and recommendation system utilizing a *Retrieval-Augmented Generation (RAG) model* with *Qdrant Vector DB* and integrated Traversaal.ai's *Ares API* for real-time, semantic query processing and enriching data.
- Employed a *conversational chatbot* leveraging *OpenAI* functions and hosted on *Intel Developer Cloud*, using *all-MiniLM-L6-v2* and *llama* models from *Hugging Face* to enhance user interaction and provide context-aware dynamic hotel recommendations.

Optimizing Insurance Offerings with CLTV Prediction and Customer Segmentation | Data Mining Course Project

- Employed advanced *data mining techniques* to revolutionize insurance offerings, precisely predicting Customer Lifetime Value (CLTV) and strategically segmenting the customer base for a leading motor vehicle insurance company, driving impactful decision-making and personalized service delivery.

Customer Segmentation and Churn Prediction | Statistics Course Project

- Implemented *machine learning* for Credit Card Customer Churn Prediction and Segmentation project, incorporating data engineering for preprocessing, resulting in targeted retention strategies and reduced churn rates.
