SUMMARY

Java Developer with over 5 years of enterprise experience in designing, developing, and deploying scalable, high-performance web applications using Java 8+, Spring Boot, and microservices architecture. Expertise in financial transaction processing and proficient with Apache Kafka, Apache Spark, and Drools for business rule management. Experienced in building cloud-native solutions on AWS and Azure, with strong skills in DevOps automation, including CI/CD pipelines and shift-left testing. Adept at managing content using Adobe AEM and collaborating effectively with remote teams. Committed mentor to junior engineers and a proven contributor to robust, maintainable software solutions aligned with business goals. Demonstrates consistent tenure in enterprise software development within leading organizations. Strong communicator and proactive consultant with a passion for quality and innovation.

TECHNICAL SKILLS

Cloud Platforms:	AWS (EC2, S3, VPC, CodePipeline, CodeDeploy), Azure
Programming Languages:	Java, Python, HTML, PL/SQL
JavaScript Frameworks:	Angular JS, Angular, jQuery, Node.js, React.js
Frameworks:	Spring Boot, Spring MVC, JSP, JDBC, Hibernate
Web Technologies:	HTML5, CSS3, AJAX, Bootstrap, JSON
Databases:	PostgreSQL, Oracle SQL, MySQL, MongoDB, Sybase IQ
Big Data & Processing:	Apache Kafka, Apache Spark
Rules Engines:	Drools, jBPM, BPMN 2.0, Human Task Services
Search Tools:	Algolia, Elasticsearch, Solr
CMS Tools:	Adobe AEM
Web Services:	RESTful APIs, SOAP, Docker, Kubernetes, Redis
CI/CD Tools:	Jenkins, GitHub Actions, Maven, Bitbucket, SonarQube
Testing & Debugging:	JUnit, Mockito, Performance Testing, Splunk
Version Control:	Git, Bitbucket
Other Tools:	IntelliJ IDEA, Eclipse, STS
Methodologies:	Agile, SDLC, Test-Driven Development (TDD)

PROFESSIONAL EXPERIENCE

Java Developer

CVS Health, Scottsdale, AZ

May 2024 – Present

- Developed **RESTful APIs** using **Spring Boot** and Spring Rest Template for seamless integration with external services.
- Collaborated on healthcare **payment** and **claims** processing modules, ensuring secure, compliant transaction handling aligned with enterprise payment standards.
- Designed and implemented workflows using **jBPM** and **BPMN 2.0** to automate healthcare processes like onboarding and discharge.
- Configured **Human Task Services** and integrated **Redis** for scalable session management and stateless authentication.
- Utilized **Apache Kafka** for event-driven communication between microservices and implemented **Apache Spark** for batch processing.
- Leveraged Java 8+ features include **Lambda expressions**, **Stream API**, and **Completable Future** for asynchronous and non-blocking task execution.
- Integrated **Drools** for externalizing complex business rules, enhancing rule flexibility and maintainability.
- Applied **Elasticsearch** to optimize patient data retrieval, improving system search capabilities by 50%.
- Leveraged **Adobe AEM** to manage and deliver dynamic healthcare content across digital platforms.
- Created CI/CD pipelines using **Jenkins** and **GitHub Actions**, enabling automated deployments to **Kubernetes** (EKS).
- Integrated **SonarQube** with Jenkins pipelines to enforce code quality standards and static code analysis.
- Developed front-end components with **Angular** and enhanced UI using HTML5, CSS3, and Bootstrap.
- Created **S3** buckets for **EC2** instances to store a variety of content, including HTML pages, images, CSS files, and **JavaScript** files.
- Advocated and implemented shift-left testing strategies using **TDD**, **JUnit**, and **Mockito** to improve code quality and reduce defects.
- Monitored and improved application performance using **Splunk**, **Log4J**, and **JDBC** optimizations.
- Managed **PostgreSQL** for data persistence, and **Sybase IQ** for advanced analytics on structured data.

Java Developer Intern

PNC Bank, Pittsburgh, PA

May 2023 – Nov 2023

- Implemented **Spring MVC** for developing presentation layers and business logic with **Spring IOC**.
- Developed and secured RESTful APIs using **JWT** and **OAuth2.0** authentication.
- Created **microservices** architecture and integrated with **React** components for a dynamic SPA.
- Broke down complex development tasks into incremental, testable units, aligned with Agile principles and CI/CD goals.
- Deployed applications on **Azure**, configured **AAD**, and monitored systems using **Meraki** and **Azure** tools.
- Documented system behavior, configurations, and deployment strategies for internal repositories.
- Experienced in collaborating with distributed and remote teams to deliver complex enterprise solutions.

Junior Software Engineer

Vedainfo, Hyderabad, India

Apr 2020 – Dec 2022

- Utilized **Git** as a code repository and version control mechanism, ensuring efficient collaboration and code integrity
- across the team
- Automated CI/CD pipelines with **Jenkins**, reducing deployment errors by 40%.
- Implemented **Maven** as a build tool for **Java** projects, streamlining the build process and enhancing code quality
- Refactored legacy modules to improve code reuse, modularity, and scalability across services, resulting in 25% reduction in duplicated logic.
- Collaborated with developers to resolve build and deployment issues, decreasing turnaround time for production fixes by 35%.
- Implemented error checking and validation on Java Server Pages using **JavaScript**, improving user experience and reducing errors
- Developed and optimized REST services with **Node.js** and **Express.js**, supporting efficient data handling and integration.
- Optimized **IBM DB2's** database performance and integrity by developing tables, triggers, procedures, queries, joins, constraints, and views.

- Leveraged **AWS** services, including EC2, S3, and VPC, to deploy and manage cloud-native applications.
- Utilized **IAM** for user and access management, ensuring security and compliance.
- Produced and consumed **Kafka** events for real-time data processing and seamless communication between microservices
- Implemented **Pub/Sub** event-driven architecture, ensuring efficient data exchange between distributed systems.
- Deployed **Docker** containers on AWS EC2 and maintained traffic using **AWS Elastic Load Balancers**.

EDUCATION

Master of Science in Information Sciences

Lamar University, TX

Jan 2023 – Dec 2024

Awarded Dean Scholarship

Bachelor of Technology in Computer Science Engineering

Swami Vivekananda Institute of Technology, India

Jul 2017 – Jul 2021
