

PRUDHVI NEELA

FULL STACK DEVELOPER – Gen AI

MOBILE: +1 (330)-642-6590 | EMAIL: prudhvi.neela9@gmail.com | LinkedIn: www.linkedin.com/in/prudhvi-neela-98930a304

PROFESSIONAL SUMMARY

- Full Stack Developer with **4+ years of experience** building scalable, cloud-native applications using **Python (FastAPI/Django), Java (Spring Boot), React, and microservices architecture**.
- Hands-on experience implementing **Generative AI, LLM integration, RAG pipelines, and vector database search** for financial and e-commerce platforms.
- Strong expertise in developing **REST & GraphQL APIs**, backend services, and event-driven systems using **Kafka, EventHub**, and asynchronous processing.
- Skilled in working with **SQL & NoSQL databases** including PostgreSQL, MongoDB, DynamoDB, and Redis, with strong data modeling and performance tuning skills.
- Experienced in containerizing and deploying workloads using **Docker, Kubernetes (AKS)**, and automating cloud-native CI/CD pipelines via **Azure DevOps, GitHub Actions, and Jenkins**.
- Background in **financial analytics, risk modeling integration (PD/LGD/EAD)**, and enterprise-grade compliance and reporting workflows.
- Strong experience in **e-commerce search optimization, recommendation engines**, Elasticsearch-based indexing, and real-time personalization engines.
- Healthcare domain knowledge including **HL7, FHIR, SMART on FHIR, Epic EHR**, and adherence to **HIPAA, PHI/PII** data security standards.
- Hands-on with cloud platforms such as **Azure** (Key Vault, APIM, AKS, Service Bus, ML) and **AWS** (EC2, S3, Lambda, API Gateway), enabling secure and scalable deployments.
- Proven ability to collaborate with cross-functional teams, perform code reviews, improve architecture quality, and deliver high-impact features in **Agile** environments.

TECHNICAL SKILLS

- **Programming Languages:** Python (FastAPI, Django), Java (Spring Boot), JavaScript, TypeScript, SQL, NoSQL, Shell Scripting
- **Frontend Technologies:** React, HTML5, CSS3, Redux, Material UI
- **Backend & Microservices:** Spring Boot, FastAPI, Django, REST APIs, GraphQL APIs, Event-Driven Microservices, Async Services
- **Databases:** PostgreSQL, MongoDB, DynamoDB, Redis, SQL Server, Vector Databases (FAISS, Pinecone)
- **Generative AI & ML:** LLMs, RAG Architecture, Prompt Engineering, Embeddings, Semantic Search, Recommendation Engines, MLflow, Azure ML, Databricks
- **Search & Indexing:** Elasticsearch, Autocomplete Pipelines, Semantic Ranking
- **Cloud Platforms:** Microsoft Azure (AKS, Key Vault, Service Bus, API Management, Event Hub, Storage), AWS (EC2, Lambda, S3, API Gateway, CloudWatch)
- **DevOps & CI/CD:** Docker, Kubernetes (AKS), Jenkins, GitHub Actions, Azure DevOps, GitLab CI, Kubernetes Helm Charts
- **Messaging & Streaming:** Kafka, Azure Event Hub

- **Healthcare Integrations:** HL7 v2 (ADT, ORU, SIU), FHIR Resources (Patient, Encounter, Observation), SMART on FHIR, Epic EHR, HIPAA Compliance
- **Financial & Analytics:** Risk Modeling (PD/LGD/EAD), Regulatory Reporting Pipelines, Credit Decisioning Dataflows, Transaction Intelligence
- **E-Commerce Technologies:** Catalog Search, Product Intelligence, Semantic Search, User Behavior Tracking, SAP ERP Integrations
- **Tools & Platforms:** Git, GitHub, Jenkins, SonarQube, Prometheus, Grafana, Postman, JIRA, Linux

CERTIFICATIONS

Microsoft Certified: Azure Fundamentals (AZ-900)

EDUCATION

- **Master's Degree**
Youngstown State University, United States | May 2025 | GPA: 3.9/4.0

PROFESSIONAL EXPERIENCE

Full Stack Developer-Gen AI

Truist Bank, *United States*

12/2024 – Present

Responsibilities:

- Designed and developed Python FastAPI microservices for financial data processing, customer insights, and high-volume compliance workflows.
- Built React-based front-end modules for real-time dashboards displaying credit exposure, risk KPIs, portfolio trends, and regulatory alerts.
- Integrated Generative AI & LLM features automate narrative generation for risk summaries, borrower explanations, and compliance documentation.
- Implemented RAG architecture using vector databases (FAISS/Pinecone) to provide context-aware retrieval for financial policies and historical loan records.
- Developed secure REST APIs enabling inter-service communication between loan origination systems, risk engines, and regulatory reporting modules.
- Containerized microservices using Docker and deployed them to Azure Kubernetes Service (AKS) with auto-scaling and rolling deployments.
- Designed event-driven pipelines using Kafka to stream transactions, customer events, and risk signals in real time.
- Built SQL/NoSQL data layers using PostgreSQL, MongoDB, Redis, and optimized schema design for analytical workloads.
- Collaborated with quants and financial analysts to integrate PD/LGD/EAD financial models into backend pipelines with version-controlled model deployments.
- Implemented MLOps workflows using Azure ML, Databricks, MLflow, and CI/CD pipelines for model tracking, deployment, and monitoring.
- Applied role-based access, encryption, and secure integration using Azure services such as Key Vault, Service Bus, API Management.

- Worked closely with CloudOps to optimize AKS costs, improve latency, and strengthen observability using Prometheus & Grafana.
- Conducted code reviews, improved architecture documentation, and drove engineering best practices across the team.
- Collaborated with QA & SDET teams to improve test coverage, implement contract testing, and build automated API test suites.
- Improved performance of streaming and microservices components by 25–40% through profiling, indexing, caching, and async processing.

Environment: Python (FastAPI), Java (Spring Boot), React, JavaScript/TypeScript, PostgreSQL, MongoDB, Redis, Kafka, Docker, Kubernetes (AKS), Azure Cloud (Key Vault, Service Bus, APIM, Event Hub), MLflow, Azure ML, Databricks, Vector DBs (FAISS/Pinecone), GitHub Actions CI/CD, Linux

Packaged Application Development Analyst

Accenture Solutions Pvt Ltd, India

10/2022 – 07/2023

Responsibilities:

- Developed Django-based backend microservices for product management, order workflows, customer profiles, and cart intelligence.
- Built and consumed GraphQL APIs to support dynamic product filtering, catalog search, and personalized recommendations.
- Implemented Generative AI-powered product insights, automated content generation, and conversational product search.
- Designed and deployed RAG architecture using vector databases (FAISS/Pinecone) to improve search relevance and contextual product suggestions.
- Engineered high-performance search pipelines integrating Elasticsearch for product indexing, keyword relevance, autocomplete, and semantic ranking.
- Designed scalable data models for PostgreSQL, MongoDB, and DynamoDB, optimizing read/write performance for high-traffic e-commerce transactions.
- Built containerized services with Docker and deployed them to Azure Kubernetes Service (AKS) with auto-scaling and production-grade monitoring.
- Integrated real-time event-streaming pipelines using Kafka/EventHub for order events, user behavior tracking, inventory updates, and recommendation triggers.
- Developed microservices supporting personalized recommendation engines using embeddings, user affinity models, and behavioral signals.
- Implemented CI/CD workflows via Azure DevOps, GitHub Actions, and Jenkins, including automated testing, build pipelines, and blue/green deployments.
- Built ingestion and sync workflows between Django services and SAP ERP, ensuring accurate product, pricing, and inventory data across systems.
- Implemented MLOps pipelines using MLflow and Azure ML for model versioning, monitoring, and automated deployment of recommendation models.
- Enhanced security, logging, and performance through caching, rate limiting, distributed tracing, and advanced API observability.

Environment: Python (Django), GraphQL, JavaScript, PostgreSQL, MongoDB, DynamoDB, Elasticsearch, Kafka, Azure Event Hub, Docker, Kubernetes (AKS), Azure Cloud (Key Vault, API Management, Storage), Vector Databases (FAISS/Pinecone), RAG Pipelines, MLflow, Azure ML, SAP ERP, Redis, GitHub Actions, Azure DevOps, Jenkins

Software Developer

United Health Group, India

09/2020 – 10/2022

Responsibilities:

- Developed Java Spring Boot microservices to support patient data retrieval, appointment workflows, and clinical event processing.
- Built and maintained REST APIs for secure data exchange between internal services, EHR systems, and external partner applications.
- Worked on React components for provider dashboards, patient records, and clinical insights pages.
- Wrote SQL queries and helped design tables for PostgreSQL, along with basic CRUD operations in MongoDB for document-style data.
- Assisted with Kafka producers and consumers for streaming lab results, encounters, and clinical notifications.
- Containerized services using Docker and deployed them into Kubernetes environments for testing and integration validation.
- Used Git for version control and contributed to feature branches, code reviews, and merge requests.
- Supported CI/CD pipelines using Jenkins and GitHub Actions, helping automate builds, tests, and deployments.
- Worked with HL7 v2 messages (ADT, ORU, SIU) and supported transformations into FHIR resources like Patient, Encounter, Observation.
- Followed HIPAA and PHI/PII compliance guidelines, ensuring secure handling of patient data with proper access controls.
- Collaborated with EHR teams to support integrations with Epic, troubleshooting workflow and data inconsistencies.
- Assisted in developing modules for SMART on FHIR app authorization using OAuth2 and FHIR scopes.
- Supported clinical analytics use cases by preparing data extracts for population health metrics and quality dashboards.
- Helped configure AWS services such as EC2, S3, Lambda, API Gateway, and monitored logs using CloudWatch.
- Participated in Agile ceremonies, provided daily status updates, and documented API endpoints, workflows, and test cases.

Environment: Java, Spring Boot, REST APIs, React, PostgreSQL, MongoDB, Kafka, Docker, Kubernetes, Git, Jenkins, GitHub, HL7 v2, FHIR, SMART on FHIR, Epic EHR, AWS (EC2, S3, Lambda, API Gateway, CloudWatch), Linux, Agile
