

Neelam Gujar

(315)-760-1219 | nvgujar@syr.edu | [linkedin.com/in/neelam-gujar/](https://www.linkedin.com/in/neelam-gujar/) | github.com/NeelamGujar

TECHNICAL SKILLS

- **Programming Languages:** Python, R, Java, C++, HTML, CSS
- **Databases and Big Data:** SQL, Azure, AWS, Oracle HCM cloud, Snowflake, PySpark, SparkSQL, Hadoop
- **Data Analysis & Visualization:** Excel, Tableau, Power BI, T-test, Statistical & Descriptive Analysis, Chi-Square Test, A/B Testing
- **Machine Learning:** Supervised & Unsupervised Learning (Decision Trees, Random Forest, Support Vector Machines (SVM), K-Means Clustering, XGBoost, Linear & Logistic Regression), Deep Learning (CNN, RNN, LSTM), NLP
- **Certifications:** [AWS Certified Data Engineer – Associate](#), Oracle Benefits, Python for everybody

WORK EXPERIENCE

Information Technology Consultant | ITS, Syracuse New York

January 2025 - Present

- Resolved 200+ faculty, staff, and student IT issues by implementing a Jira ticketing system, reducing response times by 30% and improving satisfaction scores.
- Consolidated and standardized technology asset records from multiple sources using SQL and Excel, eliminating duplicate entries and improving reconciliation efficiency by 40%.
- Engineered secure Azure-based technology rollouts, reducing event setup times by 40% while ensuring scalable performance.
- Automated document migration from Confluence to GitHub using Python scripts, cutting manual workload by 50% and ensuring up-to-date documentation availability.
- Led the design and deployment of an AI-driven chatbot using Azure Cognitive Search & Azure OpenAI, enabling natural language query handling and enhancing digital engagement.
- Strengthened secure document access by integrating indexing, identity management, and role-based access control.

Data Analyst | iConsult Collaborative, Syracuse New York

August 2024 – May 2025

- Built and executed forecasting models (XGBoost, Linear Regression, ARIMA) for supply chain demand planning, improving prediction accuracy by 15% and reducing stockouts by 22% for high-volume SKUs.
- Engineered 20+ predictive features from 150K+ multi-source records using Python and SQL, improving signal quality and reducing data noise by 30%.
- Performed A/B testing and statistical evaluations (t-tests, regression diagnostics) on forecasting approaches, influencing \$300K+ in procurement strategies.
- Automated ELT pipelines using dbt and Snowflake, cutting model training time by 30% and enabling daily scoring on live datasets.
- Embedded model results into Tableau dashboards for three cross-functional teams, accelerating data-driven decision-making by 40%.

Associate | HCM Oracle Cloud | Cognizant, Mumbai, India

July 2021 - July 2022

- Directed an 8-member team to design and implement 3 compensation plans, ensuring alignment with organizational objectives and delivering results ahead of deadlines.
- Executed comprehensive compensation plans, boosting employee satisfaction by 27% and integrating with company objectives for competitive employee offerings.
- Customized and validated Oracle HCM Cloud systems for 5 clients, achieving integration success rate and a 40% reduction in post-deployment issues, while designing Tableau dashboards to track integration metrics and performance.
- Authored DS30 and AN100 documentation detailing configuration, workflows, and compensation mapping to guide clients in understanding solution architecture and ensuring system continuity.
- Delivered Oracle Compensation solutions for healthcare and banking clients, addressing industry-specific challenges, achieving a 90% client retention rate, and ensuring compliance with sector regulations.

PROJECTS

Energy Consumption Analysis

August 2024 – December 2024

- Processed 4.2 million records and 200 variables covering housing, energy usage, and weather parameters using R (tidyverse, lubridate), ensuring full data integrity through rigorous cleaning and validation.
- Conducted ANOVA and correlation analysis to quantify the relationship between energy consumption and external environmental factors, with a specific focus on temperature fluctuations and seasonal changes.
- Developed a multiple linear regression model achieving 79.8% R^2 , accurately identifying key drivers of energy consumption such as insulation efficiency, HVAC usage, and temperature sensitivity.
- Created an interactive Shiny dashboard enabling stakeholders to visually explore trends, simulate consumption scenarios, and derive actionable insights. This tool facilitated data-driven decision-making that resulted in a 20% reduction in energy usage, demonstrating the impact of predictive modeling in sustainability initiatives.

Safe Chat Application

August 2020 – August 2021

- Programmed NLP algorithms to filter harmful content, reducing minors' exposure by 50% and enhancing platform safety.
- Constructed decision-tree-based machine learning models, improving security threat detection accuracy by 40%.
- Implemented advanced encryption algorithms and multi-factor user authentication protocols to safeguard sensitive user data, significantly enhancing platform security and reducing unauthorized access incidents by 60%.
- Utilized sentiment analysis to monitor user interactions, enabling early detection and prevention of cyberbullying.
- Published research paper, "Co-existence of Privacy and Security of Minors on Social Networks," highlighting innovative solutions to online safety challenges for minors. <https://www.researchgate.net/profile/Neelam-Gujar>.

EDUCATION

Syracuse University, School of Information Studies, Syracuse, NY

May 2026

Master's in applied data science

Mumbai University, Dwarakadas J. Sanghvi college Of Engineering, Mumbai, Maharashtra

May 2021

Bachelor of Engineering (B.E) || Information Technology || CGPI: 8.83
