EDUCATION

Master of Science in Data Science – Computer Science

Florida State University; GPA: 3.9

August 2023 – May 2025

Tallahassee, FL, United States

Bachelor of Engineering in Information Technology

Savitribai Phule Pune University; GPA: 9.1/10

June 2018 – May 2022

Pune, MH, India

KEY SKILLS

Technical – C, C++, Python, Java, Advance Java, HTML/CSS, R NumPy, Pandas, PHP, PyTorch

Tools – Git, Microsoft Office, Google Looker Studio, Microsoft Power BI, Tableau, AWS S3

Databases – MySQL, MongoDB, Postgres, Amazon RDS

EXPERIENCE

COAPS, Florida State University (FSU) – Tallahassee, FL

September 2024 – Present

Web Analyst/Developer

- Extract, clean, and analyze ship research datasets, leveraging SQL to generate visualizations (e.g., pie charts) that present quality control outcomes for 30+ ships with live data updates, enhancing data-driven decision-making and transparency.
- Optimize and maintain data-driven web applications (SAMOS and MDC) using PHP and SQL, improving functionality, user experience, and analytics capabilities by 20% through database enhancements, process improvements and reducing load time.
- Automated data processing workflows, streamlining routine tasks, reducing manual effort by 25%, and ensuring full compliance with data accessibility, reporting standards, and industry best practices for improved efficiency and scalability.

Geniobits Private LTD – Maharashtra, India

May 2021 – July 2021

Web Data Analyst and Management Head Intern

- Directed a 200-member intern team to preprocess and categorize 1M+ structured and unstructured data points, improving project efficiency by 20%. Collaborated with 5+ teams to perform in-depth EDA, optimize backend systems, and enhance website functionality by refining queries and caching strategies, reducing load times by 30% and boosting user engagement.
- Leveraged AWS for cloud-based analytics, designing 5+ highly interactive dashboards with real-time filtering to visualize 100K+ data points, improving stakeholder decisions by 40%.
- Developed and refined 2 PyTorch models for predictive analytics, applying feature selection techniques, delivering 15% more accurate insights into customer behavior and trends while reducing time.

PROJECTS

Data-Driven Fitness Tracker with Predictive Modeling | Python

November 2024 – December 2024

- Engineered a fitness tracking system using Python, Pandas, and Scikit-learn, analyzing 500+ user profiles to implement a decision-tree-based recommendation system, improving personalized diet and exercise plans by 30% for good health outcomes.
- Designed a scalable architecture with a responsive frontend, integrating Matplotlib and Chart visuals to provide real-time insights, ensuring 99.9% uptime and enhancing fitness tracking accuracy by 40% with advanced data analytics.

Twitter Sentiment Analysis | Python Machine Learning

January 2024 – February 2024

- Transformed 1M+ Twitter posts into actionable sentiment insights by building a machine learning model using Python (Pandas, NumPy, Seaborn) and NLP techniques, delivering impactful sentiment trend analysis and visualizations that enhanced overall social media monitoring by 25% and significantly improved real-time sentiment tracking for better audience engagement.
- Optimized the sentiment classification model with precision-focused feature engineering techniques, enabling real-time sentiment tracking and supporting data-driven decision-making, improving model accuracy by 20% in social media analytics.

Body Performance Analysis | Regression Analysis

October 2023 – December 2023

- Analyzed a dataset of over 1,000 entries from the Korean Sports Promotion Foundation, exploring the significant relationship between age, physical activities, and grip strength, yielding valuable insights for better athletic performance improvement.
- Applied advanced regression analysis and data visualization techniques, identifying key predictors of grip strength, which directly informed athletic training programs, positively impacting over 200 athletes' performance, tailored training plans.

Distributed Storage System using IPFS | Django Web Development

August 2021 – May 2022

- Engineered a robust storage system using Django and IPFS, efficiently managing over 2TB of data across 100+ nodes while ensuring secure, scalable, and efficient file storage with 99.9% uptime, benefiting 500+ global users worldwide.
- Published a comprehensive research paper titled "Distributed Storage System Using IPFS" in the International Journal of Research and Analytical Reviews (IJRAR), contributing valuable insights to the field (Paper ID: IJRAR1CNP041).

LEADERSHIP

Toastmaster DYPCOE | Founder and President

March 2020-January 2022

Information Technology Engineering Student Association | Management Head

January 2021 – January 2022
