1865 Arbordale St

Ann Arbor

MI-48103

Objective: Seeking a full time position as an Embedded Software Verification Engineer

Education:

Wayne State University, Detroit

Dec'14

M.S. Computer Science, GPA: 3.65/4.00

Relevant Courses:

NoSQL Databases

Introduction to Android programming

Web Technology & AJAX

DBMS

Anna University, India

May'07

B.E. Computer Science and Engineering, Grade: 72%

Relevant Courses:

Theory of Automata

Systems Software

Software Testing

Design and Analysis of Algorithms

Skills:

Programming : C, C++, Java, HTML, CSS
Platform : Windows, UNIX
Software : Matlab, MS Office, SAP
Database : SQL

Professional Experience:

Harman International., Infotainment – Associate Engineer

Jan'15-Current

- Gather customer specification, understand deliverables and evaluate the technical feasibility and software impact
- Address ambiguous and conflicting requirements to the customer and propose a viable solution
- Document the functional requirements at a suitable level of detail (SRS) to comply with Automotive SPICE and maintain their traceability in the requirements management system (DOORS)
- Track the status of requirements throughout the product development life cycle and manage changes to the baseline requirements through a change control process
- Support developers & validation team to ensure requirements are interpreted correctly

Harman International., Infotainment – Software Engineer Intern

Jul'14-Dec'14

- Developed a software tool to track & monitor change requests
- Reviewed customer requirements and performed impact analysis of change requests
- Automation of day-to-day tasks using DXL scripts on DOORS database

Global Business Solutions LLC - Web Development Intern

Jan'14-May'14

- Revamp and enhance the functionality of the company website using HTML&CSS
- Refurbish the training curriculum of the company

Big Data Research Laboratory (Wayne State University)

Sep'13-Dec-13

- Development of web services and xml parsing

Wipro Technologies - Software Engineer (SAP Basis)

Dec'07-Dec'11

Onsite Projects:

Yell Limited, Reading, UK

- Performed batch job scheduling in Synchrony Automator tool and SAP

- Evaluated and tested the performance, efficiency and robustness of the program in a test environment and implemented background jobs in production systems
- Prepared special batch schedule charts which contains business critical jobs during events like SAP upgrade, release, day light saving clock change and bank holidays

Offshore Projects (India):

Yell Limited

- Performed emergency batch schedule manually in SAP when Synchrony Automator was unavailable
- Performed space management tasks like cleaning up of historical data and addition of disk space in SAP servers
- Installation, configuration and upgrade of Synchrony Automator tool

European Aeronautic Defense and Space Company (EADS)

- Executed user management activities like addition and removal of users, role assignment and modification of user profiles in SAP systems
- Performed transport management task like import transport request, re-import of failed transports

Nike Inc.,

- Performed SAP file system cleanup, kernel upgrade, SPAM upgrade, applied support packs, spool management and transport management
- Executed online change of operation mode, set up OSS connection with SAP

Application Monitoring and Response Team:

- Performed monitoring of all the flavors of SAP systems using basic monitoring transaction codes for user locks, DB locks, failed jobs, DB space availability, user activity log & dumps

Academic Projects:

Jan'13-Aug'14

Android App for School Lunch Menu

- Co-Developed an App that displays lunch menu of every day on the calendar
- Save preferences & Notifications for favorite meal of the user is integrated in the app

Michigan Pollutants Management System

- Designed and developed a GUI using Java & Mongo DB for the Michigan pollutants dataset in JSON format
- The system was able to perform CRUD operations and also retrieve documents based on queries supplied to the collection

Automotive Car Review System

- Designed and developed a GUI based car review system using Java & SQL
- The user friendly review system is setup to obtain useful information such as demographics, segmentation and critical requirements/priorities of an automotive car buyer

Face Recognition model using Haar Wavelets methodology

- Developed a system model for face recognition based on Haar Wavelets methodology using Principal Component Analysis and cluster analysis techniques
- The experiment was performed on the AT&T face database and the model was able to successfully identify the image fed into the classifier

Internet Advertisements

- Represented a data set containing a set of possible advertisements on internet pages
- Analyzed the data set using Data Mining algorithms and predicted whether an image is an ad or non-ad
