PROFESSIONAL EXPERIENCE

Machine Learning Engineer, Enlitic Inc, Fort Collins, US.

Jun 2023 - Jan 2025

- Built 12+ ETL pipelines with AWS services (Step Functions, Lambda, Glue, EMR, S3) to scale radiology DICOM file processing by 10x, handling over 1Billion records and enhancing data quality.
- Optimized SQL code repository increasing is 30% decrease in data retrieval time.
- Engineered a real-time logging framework to enhance model development and streamline error management.
- Developed a dataset management tool with Python and AWS (S3, DynamoDB, RDS), reducing retrieval time by 60% and improving analytics turnaround.
- Converted EMR jobs to serverless AWS Glue jobs resulting in about 40% cost saving and increased fault tolerance.
- Implementing an automated AWS ETL pipeline deployment and development workflow using GitHub CI/CD and Terraform IaC ensures efficiency, scalability, and reliability in data processing.

Data Science Intern, Enlitic Inc, Fort Collins, USA.

Jun 2022- May 2023

- Designed and implemented an automated ML model validation report system using AWS CodeBuild, CodeArtifact, Event Bridge, Athena, and Batch Jobs, ensuring seamless report generation, Confluence updates, and team notifications via SNS while increasing evaluation efficiency by 20%.
- Developed a web application for analyzing medical DICOM images using a machine learning model to detect 23 anomalies and visualize inferences as heatmaps, improving diagnostic accuracy and hosted it on AWS (S3, EC2, ELB, DynamoDB, EBS) with fault tolerance and scalability, ensuring compliance with HIPAA, HL7, DICOM standards.
- Developed a gRPC API for machine learning model inference, enabling efficient and scalable access via a protobuf-based service.

Machine Learning Intern, Fellowship.ai, Boulder, USA.

Jan 2022 - Apr 2022

- Led a team of five to develop a pose detection-based fitness activity recognition by analyzing fitness demonstration videos with a test accuracy of 91% and a F1 score of 87%.
- Designed a framework to collect and annotate more 8 hours of videos into 2M data points.
- Custom trained an image segmentation model to identify the type and condition of flooring, roof and check for the presence of solar panel with a 90% accuracy of real estate listings.

TECHNICAL SKILLS

Big Data & Cloud Frameworks: Apache Spark, Apache Kafka, Apache Flink, AWS EMR, Snowflake, Iceberg, AWS Redshift, PostgreSQL

Data Orchestration & Workflow Automation: Apache Airflow, AWS Step Functions

Programming & Scripting: Python, R, SQL, Shell Scripting

Machine Learning & AI: TensorFlow, PyTorch, Keras, Transformers, LLM, AutoML

Data Visualization & DevOps Tools: Power BI, AWS QuickSight, GitHub CI/CD, Docker, Terraform

Key Competencies: Data Modeling, Distributed Systems, ELT/ETL pipelines, Data Visualization, KPI Experimentation

EDUCATION

M.S. in Data Science, University of Colorado Boulder, USA

Aug 2021 - May 2023

B.E in Mechanical Engineering, Amrita Vishwa Vidyapeetham, Bangalore, India

Jun 2016 - May 2020

TECHNICAL PROJECT

Real-Time Meme Coin Analytics Pipeline

- Deployed a scalable data pipeline to track meme coin trends and sentiments from Reddit posts.
- Integrated Apache Kafka to stream data and utilized Apache Flink for applying sentiment analysis.
- Automated the ETL workflow using Apache Airflow, enabling scheduled data ingestion and transformations.
- Developed a Grafana dashboard for data analytics and containerized the entire application using docker.

CERTIFICATIONS

- [AWS Certified Data Engineer Associate](#)
- [IBM Data Science Professional](#)
