

EDUCATION

Syracuse University, Syracuse, New York, USA	May 2024
▪ M.S. Information Systems and Data Science, GPA – 3.9	
Savitribai Phule Pune University , Vishwakarma Institute of Information Technology, Maharashtra, India	May 2020
▪ B.E. Computer Engineering, GPA – 3.8	

TECHNICAL SKILLS/PUBLICATIONS

- **Analytics** : Tableau, Microsoft (Excel, Power BI)
- **Programming Languages** : Python, R Programming, SQL (MySQL), NoSQL
- **DevOps/Tools** : Git, R Studio, Docker, Kubernetes
- **Cloud Tools** : Snowflake, MongoDB
- **Additional Skills** : Business Intelligence, ETL, Agile, Atlassian JIRA
- **Libraries**: Pandas, NumPy, Scikit-learn, SeaBorn, GGPlot, Tidyverse

WORK EXPERIENCE

Syracuse University	
1. Research Analyst Intern	July 2024 – Present
▪ Optimized and documented Python setups for scalable Streamlit-based data science applications.	
▪ Successfully deployed a scalable chatbot using Streamlit, integrating best practices for data-driven solutions.	
▪ Architected a memory-enabled chatbot with OpenAI, enhancing conversational AI with advanced data retention.	
2. Graduate Assistant, Advanced Business Analytics	September 2023 – December 2023
▪ Supported advanced data analytics initiatives to drive strategic decision-making for the university by leveraging SQL for data extraction and transformation.	
▪ Conducted statistical analysis on large, complex datasets using Python, SQL for querying and managing databases, and Tableau to uncover key business insights and trends.	
▪ Designed and implemented predictive models and interactive Tableau dashboards that tracked and visualized student performance metrics, leading to a 20% improvement in performance tracking.	
3. Graduate Assistant, Managing Information Systems Projects	January 2023 – May 2023
▪ Facilitated the holistic development of a comprehensive project management framework by employing Microsoft Project, to streamline the creation of a detailed work breakdown structure that increased the efficiency of project execution.	
▪ Augmented course materials by implementing necessary updates, to boost the instructor’s effectiveness in delivering instruction that contributed to an enriched learning environment.	
▪ Guaranteed student access to all necessary course materials by diligently distributing syllabi, assignments, and lab guides, to ensure a seamless learning experience that increased student engagement and participation.	
Associate Software Engineer, LogicMonitor, Pune, Maharashtra, India	October 2020 – July 2022
▪ Upgraded monitoring infrastructure integrating Kubernetes, Docker, and AWS which resulted in 25% improvement in operational efficiency.	
▪ Addressed 10+ critical software issues via Agile practices, improving data quality and increasing customer satisfaction by 20%.	
▪ Collaborated with a team of five professionals to design and implement new features focused on Kubernetes monitoring using data analysis.	
▪ Produced comprehensive documentation for 5+ feature releases annually, ensuring data integrity and compliance with governance standards.	

PROJECTS

Data Warehouse and Business Intelligence Reporting for Fudgemart –Data Warehousing	January 2024 – May 2024
▪ Architected a scalable data warehouse solution for the Fudgemart retail dataset, leveraging Snowflake and employing the dbt framework to implement industry-standard methodologies.	
▪ Engineered a robust ETL/ELT pipeline that seamlessly integrated data from multiple sources into the Snowflake data warehouse, while implementing comprehensive data quality and master data management processes.	
▪ Designed and documented a dimensional data model, including a bus matrix, and detail dimensional modeling.	
▪ Crafted insightful BI dashboards and reports using Power BI, enabling advanced analytical capabilities.	
Walmart Sales Time Series Analysis – Scripting for data analysis	September 2023 – December 2023
▪ Conducted comprehensive data analysis and predictive modeling to forecast sales for a major retailer.	
▪ Executed a detailed data analysis and modeling project for Walmart, leveraging data preprocessing, feature engineering, and a Gradient Boosting Regressor (GBR) model that achieved an exceptional adjusted R-squared of 0.96.	
▪ Analyzed retailer data to engineer new features and extract insights, using a Support Vector Regressor (SVR) model with a good but relatively lower adjusted R-squared of 0.62.	
▪ Developed and optimized GBR and SVR models, evaluating performance using statistical metrics and visual comparisons, with the GBR model demonstrating significantly stronger predictive power to support strategic planning.	
Credit Card Fraud Detection – Data Science	May 2023 – July 2023
▪ Developed a comprehensive solution to address the challenge of credit card fraud detection in a highly skewed dataset.	
▪ Leveraged data preprocessing, feature engineering, and a suite of machine learning algorithms, including Logistic Regression, Random Forest, and XGBoost, to achieve over 99% accuracy in identifying fraudulent transactions.	
▪ Improved the performance of the Logistic Regression model from 66.45% to 71% accuracy by implementing data balancing techniques, such as oversampling and undersampling, to address the issue of an imbalanced dataset.	
▪ Compared the performance of multiple machine learning algorithms, including Logistic Regression, Random Forest, and XGBoost, to identify the optimal model for the credit card fraud detection problem, selecting XGBoost and Random Forest as the top-performing models.
