

Summary:

Python Full Stack Developer with a proven track record of designing and deploying high-performance, scalable web applications and data processing solutions in the banking and technology sectors. Proficient in **Python (Flask, Django), React, Node.js**, and **cloud-native development**, with expertise in building secure **APIs**, optimizing system performance, and implementing **CI/CD pipelines**. Adept at integrating data security, performance optimizations, and real-time event-driven architectures to enhance reliability and efficiency. Strong collaborator in **agile** environments, **driving innovation, code quality**, and seamless cross-functional team coordination. Passionate about leveraging modern **web frameworks, scalable architecture, and cloud technologies** to build cutting-edge digital solutions.

Skills

- **Front-End Development:** JavaScript (React, Next.js, Angular), TypeScript, HTML5, CSS3, Tailwind CSS, Bootstrap.
- **Back-End Development:** Python (Flask, Django, FastAPI), Node.js (Express.js, NestJS), Microservices Architecture, RESTful APIs, GraphQL.
- **Database Management:** SQL (PostgreSQL, MySQL, SQLite), NoSQL (MongoDB, DynamoDB, Redis), Query Optimization.
- **Cloud & DevOps:** AWS (Lambda, S3, EC2, RDS, DynamoDB), Azure (App Services, Functions, CosmosDB), Google Cloud Platform (GCP).
- **CI/CD & Automation:** Jenkins, GitHub Actions, Terraform, Docker, Kubernetes, Serverless Framework.
- **Data Engineering & ETL:** ETL Pipelines, Apache Airflow, Apache Kafka, Pandas, NumPy, PySpark, Data Warehousing (Snowflake, Redshift).
- **Security & Performance Optimization:** Data Encryption, OAuth2.0, JWT Authentication, Caching Strategies, Load Balancing.
- **Testing & Debugging:** Unit Testing (PyTest, Jest), Integration Testing, Performance Monitoring (New Relic, Prometheus, Grafana).
- **Collaboration & Agile Development:** Scrum, JIRA, Git, Peer Code Reviews, Technical Documentation.

Education

- Masters in Computer Science from Pace university, New York

Experience

Truist Bank | Aug 2024 – Present

Python Full-Stack Developer

- Designed and developed high-performance web applications using **Python, Flask, React, and Node.js** to deliver scalable digital banking solutions.
- Implemented comprehensive **testing, debugging, and code review** processes to ensure optimal code quality and system reliability.
- Integrated advanced security measures and performance optimizations to safeguard sensitive financial data and enhance application efficiency.
- Collaborated effectively within **agile** teams by contributing to project planning, technical documentation, and iterative development cycles.
- Actively engaged in peer code reviews and adopted emerging technologies to continuously improve application functionality and drive innovation.
- Developed scalable banking applications using **Python (Flask) and react**, ensuring secure and seamless digital transactions.
- Enhanced **performance and security** by implementing optimized queries, caching mechanisms, and data encryption for financial transactions.
- Reduced application downtime by **30%** through proactive **debugging, unit testing, and performance monitoring**.
- Improved customer experience by designing intuitive **UI components** and enhancing **API** response times, leading to faster transactions.

Microsoft | Aug 2018- Jan 2023

Python Full-Stack Developer |

- Engineered scalable Python-based **data pipelines** to handle multiple data formats with high performance and reliability.
- Designed and implemented real-time and event-driven data processing solutions that ensured robust data integrity and observability.
- Developed **RESTful APIs** using **Django/Flask** to enable seamless integration and secure data access within **Microsoft's cloud ecosystem**.
- Collaborated with cross-functional teams to integrate **CI/CD practices**, enhancing deployment efficiency and code quality.
- Optimized **SQL queries** and data storage models, resulting in significant improvements in system performance and data retrieval speeds.
- Achieved a **40%** reduction in data processing latency by designing and deploying scalable **Python**-based pipelines for varied data types.
- Enhanced system reliability by implementing robust real-time and event-driven processing solutions that ensured high data integrity.
- Improved **API** performance through the development of secure, efficient **RESTful** services using **Django/Flask**, fostering seamless cross- team integration.
- Streamlined deployment cycles by integrating **CI/CD pipelines**, significantly reducing time-to-market and minimizing operational downtime.
- Optimized **SQL query** performance and data storage models, resulting in notably faster data retrieval and enhanced overall system performance.
