

GALLA NEHA

Email: itsnehagalla@gmail.com | Phone: +1(980)-226-2753 | [Linkedin](#)

PROFESSIONAL SUMMARY

Software Engineer with 3+ years of experience in developing scalable applications using Java, Spring Boot, React.js, and RESTful APIs. Skilled in microservices, database optimization, cloud deployments (AWS), and CI/CD automation to deliver secure, high-performance solutions.

CORE COMPETENCIES

Languages: Java, Python, JavaScript, Familiar with C#, SQL

Frontend: React.js, Angular, HTML5, CSS3, Bootstrap

Backend: Spring Boot, Node.js, REST APIs, Hibernate, Microservices

Databases: MySQL, PostgreSQL, MongoDB, Oracle

Cloud & DevOps: AWS (EC2, S3, RDS), Docker, Jenkins, Maven, Git, GitHub Actions

Testing & Tools: JUnit, Mockito, Postman, SQL Developer, Bitbucket

Design Patterns: MVC, Singleton, DAO

PROFESSIONAL EXPERIENCE

CVS PHARMACY — NY

Software Engineer | Jan 2024– Present

- Developed and maintained scalable backend services using **Java** and **Spring Boot**, supporting pharmacy workflows like prescription processing, refill management, and patient communication.
- Built RESTful APIs to integrate with internal systems and third-party services (e.g., insurance verification, medication history), reducing manual pharmacy staff effort by 30%.
- Utilized **Spring JDBC** to interact with legacy Oracle databases, writing optimized SQL queries and mapping results to Java objects for high-volume data operations.
- Designed and implemented the data access layer using **Spring Data JPA**, enabling cleaner repository code and efficient query handling through method naming conventions and `@Query` annotations.
- Managed build lifecycle using **Maven**, handling multi-module project configurations, plugin integrations, and environment-specific profiles for dev, QA, and prod.
- Supported **CI/CD pipelines using Jenkins**, handled containerization with **Docker**, and deployed services to **AWS** environments.
- Collaborated with UI developers to support **React-based** front-end applications and RESTful backend integration.
- Followed **Agile/Scrum** methodology, participating in sprint planning, backlog grooming, and daily stand-ups for iterative delivery.
- Wrote comprehensive **unit and integration tests** using **JUnit** and **Mockito**, achieving over 85% code coverage and reducing regression defects.
- Ensured secure handling of patient and prescription data, complying with **HIPAA regulations** and internal CVS security standards.

Key Contributions:

- **Reduced backend response time** by 25% through lazy loading, query tuning, and service-layer optimizations using Spring Boot and JPA.

CARELON GLOBAL SOLUTIONS — India
Associate Software Engineer | Mar 2020– July 2022

- Designed and implemented **microservices using Java and Spring Boot** to manage quoting and rating logic for real-time health insurance quotes.
- Built and maintained **RESTful APIs** for quote generation and plan selection, integrating with both frontend apps and third-party systems.
- Integrated **MongoDB and SQL databases** for efficient storage and retrieval of policy and rating data, improving system performance.
- Developed dynamic **Angular dashboards and forms** for real-time quote generation, enhancing user experience and responsiveness.
- Conducted **unit testing using JUnit** and used **Postman** to validate API endpoints, ensuring robust and error-free integrations.
- Created a full-stack **MERN application** (MongoDB, Express, React, Node.js) with real-time features and **OAuth 2.0 authentication** for secure user login.

Key Contributions:

- Improved database query performance by optimizing joins and indexing strategies
- Developed reusable components and services in Angular to streamline UI development.

PROJECTS

E-Commerce Platform | Java, Spring Boot, React.js, MySQL

- Built a full-stack app with Spring Boot, React.js, and MySQL for product and order management.
- Developed REST APIs for authentication, checkout, and real-time inventory updates

Driver Safety Detection System | Python, OpenCV, Dlib

- Built a real-time driver safety monitoring system using OpenCV and Dlib to detect drowsiness and distractions, reducing risk factors for accidents.
- Designed an efficient image-processing pipeline capable of real-time video frame analysis with optimized facial landmark detection.

Neural Body AI | PyTorch, CUDA, Google Colab

- Trained deep learning models with PyTorch + CUDA for pose estimation.
- Applied neural rendering to reconstruct realistic 3D body movements.

EDUCATION

M.S. in Computer Science - University of North Carolina at Charlotte, NC, US

B.S. in Computer Science – JNTUH, India

CERTIFICATIONS

- AWS Certified Developer – Associate
- Oracle Certified Professional: Java SE 11 Developer (OCPJP)
