

# Neil Mistry

mistryneil1991@gmail.com | (732)-668-6091 | Somerset, NJ 08873

---

## PROFESSIONAL SUMMARY

---

To find a position that allows me to apply my epidemiological and statistical expertise to grow as a public health professional.

## WORK EXPERIENCE

---

### Health Data Specialist II

2024-08 - 2025-06

New Jersey Department of Health, Trenton, NJ

- Read and critique relevant literature regarding HIV susceptibility and transmission
- Clean Behavioral Data collected for research into HIV risk factors to produce a more analyzable
- Interpret and analyze the HIV Behavioral Data to guide population resource allocation
- Write reports based on findings to facilitate presentation and manuscript production of results

### Health Data Specialist II

2023-03 - 2024-06

New Jersey Department of Health, Trenton, NJ

- Implement technological software to create analyzable population-based surveillance data
- Offer back-end statistical insight on how to analyze large quantities of population-based data
- Ensure completeness of population-based data to promote validity and reliability of the data
- Provide insight on how to make epidemiological, statistical and data management workflow seamless and efficient

### Adjunct Professor

2022-08 - Present

Fairleigh Dickinson University, Madison, NJ

- Taught commonly used statistical concepts and principles so that they can effectively used in the future
- Showed and demonstrated to students the use of statistical software like SAS in solving complex computational problems
- Assigned and graded homework and projects that helped students learn to practice utilizing concepts learned in class and understand their real-life applications
- Met with students outside of class in order to clarify concepts and to present material in a different way in order to maximize their grasp of statistical principles

### Graduate Teaching Assistant

2019-08 - 2020-12

Georgia Southern University, Statesboro, GA

- Assisted professors in facilitating weekly labs by ensuring a clean environment, proactively preparing necessary compounds and mixtures, as well as providing instruction
- Guided students through the learning process by providing assistance with laboratory queries as well as addressing concerns regarding key concepts and concerns

- Provided continual feedback to both lab instructors about student progress by timely evaluating student work as well as informing students about progress individually

- Facilitated online learning during the COVID-pandemic in order to provide and ensure a productive learning environment to students

### **Clinical Analyst and Quality Assurance**

2017-04 - 2017-09

L'Oreal USA, Clark, NJ

- Wrote and reviewed protocol for future studies as well as ensure CRO compliance with the protocol for ongoing studies by ensuring proper methodology and data reporting techniques

- Organized and analyzed data generated from clinical trials using SAS, SigmaPlot and Microsoft Excel to formulate conclusions about efficacy of products

- Evaluated clinical relevance of study data by comparing the generated statistics such as p-values and means to previously known data from literature and other previously conducted studies

- Presented ongoing skin and healthcare product research conclusion and updates to my supervisors and fellow team members

### **EDUCATION**

---

#### **Master of Business Administration**

- 2025-09

Rutgers University Camden, NJ (Online)

#### **Master of Science in Biomedical Informatics**

- 2024-05

Rutgers University Newark, NJ (Online)

#### **Doctor of Public Health- Epidemiology**

- 2022-12

Georgia Southern University Statesboro, GA

#### **Master of Public Health – Biostatistics**

- 2017-01

Rutgers University Piscataway, NJ

#### **Bachelor of Science in Pharmacology and Toxicology; Pharmaceutical and Healthcare Studies**

- 2015-05

University of the Sciences Philadelphia, PA

### **TECHNICAL SKILLS**

---

- |                                                                 |                                                                                     |                                                                               |
|-----------------------------------------------------------------|-------------------------------------------------------------------------------------|-------------------------------------------------------------------------------|
| • Advance in MS Excel                                           | • PowerPoint                                                                        | • Excel                                                                       |
| • MS Word                                                       | • MS SQL                                                                            | • MS Outlook                                                                  |
| • Expertise in statistical application SAS                      | • SPSS                                                                              | • SigmaPlot                                                                   |
| • STATA                                                         | • R                                                                                 | • SQL                                                                         |
| • Tableau                                                       | • Able to communicate and problem-solve                                             | • with a solid epidemiological and biostatistics background                   |
| • Comprehensive knowledge of Epidemiology                       | • Biostatistics and Clinical Application                                            | • Comprehensive knowledge of basic statistical analysis test, including ANOVA |
| • ANCOVA                                                        | • survival analysis techniques such as Kaplan-Meier estimation and Log-Rank testing | • as well as simple, multiple and multivariate regression                     |
| • Proficient in multiple languages including Gujarati and Hindi |                                                                                     |                                                                               |

### **PROJECTS**

---

### **Exploring Phenotypes for Predicting Optimal Body Weight and Survival in Hemodialysis**

- Performed multiple linear regression using different weight stratification schemes in order determine optimal body weight for patients undergoing hemodialysis
- Implement further stratifications using novel predictors such as patient phenotypes to further justify the use of these optimal body weights among specific population characteristics
- Assisted with the implementation of machine learning methods in order to further develop predictive models for optimal body weight

*Technologies: Statistical Analysis Software (SAS)*

### **Association of Vitamins, Caffeine, and Depression using a Nationally Representative Survey**

- Conducted an exhaustive literature search to determine any literature related to either depression or any of the select dietary components
- Reviewed and analyzed data posted on secondary data sources to determine the relationship between select dietary components and depression
- Conducted logistic regression in order to determine the strength and association between depression and any of the nutritive factors considered
- 

*Technologies: Statistical Analysis Software (SAS)*

### **Analysis of Pharmacokinetic Parameters of Tuberculosis Drugs in the Animal Model**

- Reviewed data capturing the blood levels of rifampin, a standard treatment for tuberculosis, with and without the addition of verapamil
- Evaluated longitudinal concentration fluxes of rifampin with and without concurrent use of verapamil, a potent anti-hypertensive agent
- Fit models such as Loess, spline curves as well as other modelling methods to capture the curvilinear nature of the data
- 

*Technologies: Statistical Analysis Software (SAS)*
