Professional Summary

I am a Finance Student with strong quantitative and data analysis skills, proficient in Python, SQL, and financial modeling. Experienced in portfolio management, risk assessment, and data-driven decision-making. Seeking a role in investment analysis or financial risk management to leverage analytical expertise and contribute to strategic growth.

Work Experience

Company : Recity
Duration : Oct 2021 - Dec 2021
Designation : Data Analyst Intern
Profile : Managed and verified financial data entry processes, ensuring accuracy and completeness of source documents before input into designated databases and forms. Performed routine statistical quality checks to maintain data integrity and support reliable financial reporting. Prepared and submitted detailed analytical reports to relevant teams. Coordinated data routing and retrieval to assist with timely decision-making. Conducted daily control functions to ensure compliance with data governance standards and internal controls.

Academic Background

University of Massachusetts, Boston

Master's in finance - 3.9 GPA

Boston, USA August -2025 December 2026

University of Mumbai, Mumbai

Bachelor of Commerce; Investment Management- 3.34 GPA

Mumbai, India February 2021-April 2024

Projects Undertaken

Portfolio Management

For my final year project, I conducted an extensive study on innovations in portfolio management, focusing on advanced investment strategies, risk management frameworks, and emerging financial technologies. The project involved rigorous quantitative analysis and practical applications aimed at enhancing portfolio optimization and improving risk-adjusted returns. It highlighted transformative methodologies and forward-looking insights designed to shape modern investment decision-making.

Python for Financial Data Analysis Using WRDS and CRSP

Conducted a project analyzing stock market data sourced from WRDS and CRSP databases. Utilized Python libraries including Pandas, NumPy, and scikit-learn to clean, process, and visualize large-scale financial datasets. Developed predictive models to forecast monthly stock returns, employing regression and machine learning techniques to enhance portfolio management strategies. Applied data-driven insights to optimize asset allocation and risk management.

Skills

Financial & Quantitative Analysis

- Portfolio optimization (mean-variance, factor models)
- Risk management techniques (Sharpe ratio, Sortino ratio, scenario analysis)
- Behavioral finance concepts and algorithmic trading fundamentals

Programming & Data Analysis

- Python (Pandas, NumPy, scikit-learn) for financial modeling and data analysis
- Excel (advanced formulas, VBA) for financial calculations and reporting
- SQL for data extraction and management from financial databases (WRDS, CRSP)
- Power BI for interactive financial dashboards and visualization
