CAREER OBJECTIVE

Computer science graduate seeking to leverage my strong educational foundation and technical skills to embark on a fulfilling journey in the field. Committed to contributing my passion for problem-solving and innovation and eager to share knowledge gained from undergraduate projects with a dynamic organization where I can continuously learn, collaborate with talented professionals, and make a meaningful impact.

EDUCATION

Bachelor of Science
Computer Science
University of California – Santa Cruz
June 2023
GPA: 3.51 – Honors

RELEVANT COURSES

Advanced Computer Networks
Data Structures & Algorithms
Web Applications
Applied Discrete Mathematics
Database Management
Computational Models
Computer Systems Design
Analysis of Algorithms

SKILLS

Programming

- Python (Flask, NumPy)
- C/C++
- SQL (PostgreSQL)
- JavaScript (Typescript, Node.js, Bun, Express.js)

Full Stack Development
Docker
Data Science
Agile Scrum Methodology
Data Visualization

- Excel
- Google Sheets

PROFESSIONAL EXPERIENCE

Freelance Programmer / Technical Student Tutor - Self Employed
6/23 - Present

- Continuously honing understanding of Computer Science by applying knowledge and skills through programming challenges and personal projects
- Provide one-on-one sessions for fellow undergraduate students in Computer Science courses, including database management, programming, and operating systems
- Assist in debugging code and understanding various complex concepts to enhance critical thinking and problem-solving skills
- Foster a deeper understanding of computer operations, procedures, and software applications

UNIVERSITY PROJECTS

UCSC Interactive Campus Class Locator

- Creation of a web application that utilized minimal course data to dynamically search and visually represent class locations on a campus map
- Aggregated and prepared curated university course data through web scraping
- Created a database schema and hosted on Amazon Web Services
- Written in Express.js and PostgreSQL

Multi-Threaded HTTP Server

- Constructed a multi-threaded HTTP server utilizing sockets and thread pool to handle increases in traffic
- Implemented thread synchronization methods through file locks and mutexes to ensure atomicity and coherency
- Written in C/C++

ProxiPoll Web Application

- Developed a polling application with proximity features to enable users to create open-ended or predefined polls, and engage in available polls based on geo-location data
- Harnessed geo-location data via APIs, employing a robust great circle distance methodology to precisely pinpoint and identify nearby polls
- Written in Express.js and PostgreSQL
